From: R D Jennings <76606.3066@CompuServe.COM>
Message-ID: <46lkku$1gm$1@mhafm.production.compuserve.com>
Source record: 236481

This garbage about calling or not calling "CQDX" is a joke!
Having been a ham long enough to be classed as an old-timer I
have, in the course of running phone patches or passing message
traffic, called a CQ with the added limitation of a particular
state or call zone. Calling "CQDX" is the same. I feel any
amateur has the right to make an attempt to restrict responses to
his CQ. The amateur does this for many reasons. Possibly he/she
wants to add to his qualifications for a specific award like DXCC
or WAC or WAS. He/she does not want to use their time in QSO
with those from other areas -- at least not at that time. Would
it be better to just call "CQ" and then ignore those responses
from unwanted areas? I think not. Hams have been using
"directed" CQs for as long as I can remember and I have never
heard any squawking about the practice.

Down here we only have back plates, so that's a moot point. It's
funny how many clean cars you see with mud caked plates.

They tried unmanned units for a while down here, but it didn't work
very well. Seems the bulletproof housings weren't that bulletproof.

1204. Re: ARRL - One *very* good reason to be a member!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-25 00:00:00 UTC
From: kf2ti@aol.com
Message-ID: <46m0av$sqv@newsbf02.news.aol.com>
Source record: 236483

Hey, enuf...you're killing us all. It's amazing that in trying to include as much of a cross section of this fine hobby, they are several detractors out their that insist on dragging their dead horses repeatedly across my video screen.

According to THE ARRL, their benefits include, but are't limited too.

Representation of amateur interests in Washington
Regulatory information on FCC questions/antenna/tower/zoning problems/reciprocal licensing procedures/VEC programs/ARES/W1AW code practice and bulletins/ARRL sponsored contests

Access to technical information (on a level most of us can understand, not the techno-nerd/ dweeb-oid level several seem to think everyone should have 100% comprehension of), a variety of amateur radio related programs, Outgoing QSL Buro, etc. etc. etc.

QST - a source for news and information on any topic that's part of or relates to, Amateur radio.

Lots of topics covering ALL aspects of the HOBBY. And to think. alot of what they do helps tjose who don't join, won't join, can't join yada yada yada

If you want technical, subscribe to EE journal, if you want biased opinions, subscribe to 73 magazine. In other words the ARRL/QST magazine, has alittle something for everyone.

That's what makes this such a great country...you can either read it or not. Too mundane, too simple for your Einsteinian brain stems...DON'T READ IT, but don't slam those who enjoy it for what it's worth or are proud that they help sponsor an organization like this..

I read one comment about butts and amateur radio...QUESTION...just how would you load up your butt??? with a tuner fish??? or is it that it's a loaded butt to begin with???

Maybe the Technical/Electrical elite in this group should get toether and formn their own TECHNOID magazine...they could call it HEY, WE"RE SMART...YOU'RE STUPID. probably get a circulation of ohhhhh 5, 6 tops. They could have an editorial page called RECTUMS...you know...like opinions are like rectums..everyone gots one and they usually stink....

That's my opinion

Since my earlier review, I have had a chance to carry out some further tests, and hope this may be interest.

If there are any questions or comments, please e-mail me.

73s, Alf NU8I/G4ABB
Scottsdale, AZ DM43an
alf@agreen.iac.honeywell.com

Mobile operation: I had several qso's on 6m and 2m SSB, using vertical antennas out to about 40 miles or so. The noise blanker did a very adequate job, cutting the ignition noise down from abt S7 to where it was still audible but not moving the meter. Weak signals, also not moving the meter, were copiable with no problem. I had earlier commented on the lack of audio from the internal speaker, but in practice that was not a major problem. 50mph+ with the top down in my convertible the audio was quite readable. It would have sounded better with an external speaker, but my fears that an outboard audio amp would be needed were unfounded.

2m receive performance: I used the rig as the downlink receiver for AO-13, and was very pleased with the performance. Without any external pre-amp, it performed at least as well as my other rigs, that have given good service over the years. I dont think anyone would be disappointed with its sensitivity. There have been quite a few comments about the '706 being deaf on VHF. Although this is the case for general coverage above about 130MHz, it certainly is not true for 144-148MHz.
The filtering used is most definately a benefit in rejecting out of band interference. There are a couple of stretches of road near collections of commercial antennas where my HT is completely useless. Driving through there, I could hear NO effects of inter-mod on the '706.

Low frequency receive: Although the published spec says it goes down to 300kHz, it does in fact receive all the way down to 30kHz. I didnt have access to a calibrated generator for that band, but it did appear to be quite flat between 100 - 300kHz, with a fairly steep drop-off below 100kHz.

Accessory output: There is an analog output on the rear accessory connector that indicates the band in use. It DOES include a level for 6m, but not for 2m. The voltage level is as follows:

MHz volts
0-2 7.4
2-4 6.1
4-8 5.1

```
8-11 0.1 (out of sequence, not a typo)
11-15 4.1
15-22 3.2
22-30 2.2
30+ 1.2

--------------------------------------------------------------------------------
```

If you have access to a WWW browser, you can go to a callsign server and search on the Name. You can also ftp to other callsign servers like the one at buffalo

WWW Callsign servers:

http://www.qrz.com/callbook.html
http://www.ualr.edu/doc/hamualr/callsign.html
http://www.mit.edu:8000/callsign/

FTP

telnet://callsign.cs.buffalo.edu:2000/

If you don't have access to the above mentioned, e mail me your great-grandfather's name and I will search for you.

Good to hear someone from Spokane on. I will call CQ DX if I choose to
and I don't recall my license saying I can't do that. Did anyone ever
wonder why there is so many people saying you can't do this or that?
They must be very insecure in their own way of thinking. I have a very
clear opinion about CQ DX and it simply does not matter if others agree!
This hobby is supposed to be fun. BTW, I was N7IJQ in Spokane and first
licensed in Spokane as KA7YXC. Spokane is a great place - hope to be
back there someday.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 OCTOBER AND FORECAST FOR 27 OCTOBER - 29 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 25 Oct
Daily Proton Fluence >1 MeV: 8.5E+04
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.6E+07 (normal)
X-ray background: A1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Oct 28 Oct 29 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Oct: 75/13
COMMENT: Recurrence suggests high electron fluences are to be
expected during the interval 1-7 November.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 25 Oct
Learmonth 4 1111 1222
Fredericksburg 4 5
Planetary 5 6

Observed Kp for 25 Oct: 2321 1211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Oct 10 Quiet
28 Oct 10 Quiet to unsettled
29 Oct 13 Unsettled
COMMENT: Increased geomagnetic activity expected after 31 October.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Oct normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Oct normal normal fair
28 Oct normal normal fair
29 Oct normal normal fair
COMMENT: Degraded HF comms conditions expected for mid-high
latitudes after 31 October.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
26 Oct 2

Observed Australian Regional MUFs:
near predicted monthly values at Townsville, Sydney and
Hobart. Darwin MUFs depressed 30% during interval 05-09UT,
near predicted values at other times. Strong spread F
was also observed during local night at Darwin. Mild spread F
observed at Hobart during local night.

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Oct 5 Near predicted monthly values
28 Oct 5 Near predicted monthly values
29 Oct 5 Near predicted monthly values
COMMENT: Degraded HF comms conditions expected after 31 October.

1215. Icom Mobile Advice/Opinions Wanted!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-26 00:00:00 UTC
From: pferris@galstar.com
Message-ID: <9510262327.AA48009@star08329>
Source record: 236344
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Greetings,

Some time ago my IC-2410-H was stolen from my truck. I've been off the air for nearly a year as a result. However, living in Oklahoma, and entering the fall monsoon/tornado season, I'm starting to miss it again!

To cut to the chase:

I'd like to purchase a "Good" (read "excellent"!) Icom mobile. In NO particular order, the features I'd like are:

1) Dual band VHF/UHF.
2) Lots-o-memories (100's would be nice! I'm spoiled by my AOR-2500!).
3) Cross-band xmit/rx.
4) Illuminated mic -- has Icom figured that not-so-minor feature out yet?! Yeasu, and others have!
5) Freq agility (tx/rx out of band mod with some ease - soldering & nipping ok, chip re-programming - ixnay!)
6) Auto-dial memories (the more, the better!).
7) RF Power out - something in the 45-50W range would be nice.
8) Variable attenuator -20db or BETTER?!
9) Built in diplexor would probably be nice - like 2410.
10) I really liked the 2410... something with comparable or better specs would be nice.

I'm pretty sold on Icom... soo, what's their current top few rigs (Don't want anything TOOO elaborate like a 901 or whatever the remote sys was called)? What are the street prices, and who's the cheapest mail order outfit?

Many thanks for helping to "reactivate" me!

From: "Jeff Deiser, WL7BXM" <psjld@orion.alaska.edu>
Message-ID: <46mrd1$stl@news.alaska.edu>
Source record: 236346

Hello,

I am looking into buying a new dual-bander for mobile use. I've
been looking at the FT-5100, which has been recommended to me by
many friends. I have looked into the rig, and it seems to me to be
a good unit. Does anyone have any comments, or things I outta know
before I go buy it? One thing to keep in mind is that being in Alaska,
and soon in the northernmost areas thereof, it needs to handle pretty
rough service well.

Also, anyone with experience on one that's been modified for extended
xmit/rcve? I'm MARS also and wonder about the radio's performance out of
the spec'ed bands...

Please MAIL me with responses.. Thanks!

Thanks for ur help.
73 es 99 de Jeff, WL7BXM.

GJ>The "/" can be read as "portable" or "mobile", with the number
GJ>representing the call district operation is taking place from.
GJ>The slash mark followed by a DX prefix indicates operation
GJ>taking place from a country not of your original license
GJ>(example: KF2T/0 -- me in Colorado, KF2T/VE7 -- me in British
GJ>Columbia). The "/" is also used to denote "temporary" operation
GJ>for newly upgraded hams (KX5XCX/AG just upgraded to General
GJ>Class).

GJ>Good questions! Glad someone's interested in CW....
GJ>73

George, Good answers. I worked CW for years, but now I am off
the low bands because of antenna restrictions. I miss it some
but when I worked it last it got to be an awfully slow way
to communicate. Effective, but slow. 73 Mike WA8JDW

---
* WR 1.31 # 44 * What we have here Luke boy is a failure to communicate

1219. Uniden 2020 - Good "older" HF radio?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-26 00:00:00 UTC
From: ecsclfe@lux.latrobe.edu.au
Message-ID: <46mm6d$r07@lugb.latrobe.edu.au>
Source record: 236405

Howdy,
I'm thinking about buying a UNIDEN 2020 HF radio for a VERY GOOD
price. Is this is a good radio. I would be interested in any mods for
it. I know it has 2 spare valves, and is capable of 180 watts output
power. It comes with its own inbuilt power supply and the leads for 12v
usage (in the car). It is big, compared with newer solid state HF
radios, but I've never had HF before and I really can't afford the
prices people are asking for early model 80' solid state radios.
BTW, only the driver and PA module is valve. The rest is solid state.

Regards,
Luke

>I am thinking of puchasing a Standard C508A HT as a second HT, mainly for
my
>wife to use. Does anyone have experience using them? Also, does anyone
>know the mods for expansion of the 2m band to inlcude marine VHF for
>emergency purposes?

Well having had one since June and only having put the 3rd
set of batteries into it I would say that it is really not too power hungry.
I do use it quite a bit and in July used it solidly 8 to 12 hours a day for
transmit and receive for a week. That was when I changed the first set of
batteries out of it.

The antenna is not very large but it does work well in the amateur
bands. Outside the amateur radio bands it is not very well tuned and the
radio has a difficult time hearing things. The radio uses a SMA connector
for the antenna. It may be somewhat difficult to find an adapter for this
connector but it is not impossible.

If one is in a city where there are several repeaters the radio will
work quite well. The radio has ctcss capabilities to both encode and
decode.

Be warned that there is NO way to connect external power up to this
radio. It will run on the two internal AA cells just fine for a long time.
Then when they die just toss a couple more in there. There is a charger and
a NiCd pack made for the radio but in my humble opinion it is not really
necessary.
>
>At $285 it seems like quite a good deal.

Check with AES. I believe their price was a little lower than that
285 dollar price that you mention.

Why do you have HTML codes through your message?

Anyway, you're wrong here--many consumer electronics stores ask for
this information. Two that come to mind are Circuit City and Good
Guys; I'm sure there are plenty of others.

The reason for small discrepancies is simple -- the CPU in your typical GPS knows the time at a level of a fraction of a MICROSECOND -- it has to in order to compute positions at the 10's of meters level. However it knows this only after it has munched on the timing information it has received from the GPS satellites. It then takes care of its critical tasks, and then finally gives the time and position to the user. If it is sending its time out the RS232 port in NMEA format, it may take as long as a second to output all the NMEA messages at 4800 b/s.

Some of the small OEM receivers (I'm particularly aware of the Motorola ONCORE and Trimble SV-6) have options (usually at extra cost) which will output a precision time pulse once/second. In the case of the Motorola unit, when the receiver is configured for optimum time-keeping, the precision and accuracy of the 1 PPS signal is at the 30-50 NANOSECOND level. For the past year I have been working on a Motorola-based GPS timing clock which yields this kind of performance routinely. I have dubbed my clock the "Totally Accurate Clock", partially as a takeoff on Heath's old WWV-based "Most Accurate Clock", since the TAC is something like 4 orders of magnitude (yes, 40 dB!) better and I needed a word that conveyed a 40 dB improvement (and in part as a joke since TAC are my initials).

: >range. Any vehicles that it can detect are right in the center of the
: >photo. If a vehicle is behind you, a photo-radar unit will not mistake
: >you for it.
: >
: >Eric Johnson

: I'm sorry, but you're wrong.

: The Texas Department of Public Safety produced a comprehensive manual based onthe Federal tests.

: Among the radar "errors" detailed by the Texas manual:

: 1. Antenna Positioning Error

: The radar beam travels in a straight line, neither bending around curves nor
: following the contour of hilly terrain. If the antenna is not properly
: positioned, it may seem to clock an approaching car when, in fact, it's
: clocking another car in the background.

: 2. Look-Past Error

: Even if the operator aims his antenna properly, radar is still subject to
: "look-past" error. This is caused by the radar looking past a small reflection
: in the foreground to read a larger reflection behind. This error is all the
: more insidious because poorly-trained operators assume it can't happen.

: Texas instructors warn, "It is a widely-held misconception that the reflected
: target signal received by the radar antenna will always be that of the closest
: vehicle to the antenna. There are times, due to traffic conditions, that the
: closest vehicle is not returning the strongest signal."

: Evidence of the potential size of this error appeared in Car and Driver
: (October, 1979). The author measured the effective range of a Kustom Signals
: KR11 traffic radar against various vehicles. The typical small sedan did not

: show up on the radar until it was less than 1200 feet away from the antenna,
: but the same radar unit locked on to a Ford 9000 semi at 7600 feet. This shows
: how common vehicles reflect microwaves differently.
: The Texas instructors confirm this problem with radar, saying "It is not unfair
: to say that the reading you register could be a larger, better target
: three-quarters of a mile down the road."
: 3. Vehicle Interference Error

: Because moving radar tries to do a more complicated jog than stationary radar,
: it is subject to all the errors of stationary radar, plus several additional
: errors that apply to it alone.

: "Vehicle interference" error occurs when moving radar is used in traffic. For
: example, traffic ahead can confuse the radar's estimate of patrol speed. Moving
: radar calculates target speed by subtracting patrol speed from the closing
: speed of the target. Therefore, anything that produces a low evaluation of
: patrol speed will automatically result in a high speed reading of target
: speed.
: Texas tells its radar operators that this ...."situation becomes more critical
: if difference in patrol speed and interference-vehicle speed is five to ten
: mph. A target vehicle moving 61 mph may be recorded at 66-71. These borderline
: speeds are more difficult to detect with the eye."ey are
: an even bigger pain the second time around. - Herb Caen

Just a note from this area of the US that if you receive notice in the
mail that you have been fined for speeding by Photo Radar, you can go
into the court and request to see the Photo of yourself and if there is
any other car in the picture that may be closer than one car length then
you enter a not guilty plea and they can't stick it to you. They have no
proof that you were the one who was speeding or not. That is to say it
was the other guy who was speeding not me (but of course we all know
that, right?).

: The Meridian XL GPS does have a computer interface, the cable is available
: from Magellan for approx. $80, or can be homebrewed.

The Meridian (non XL) has a RS232 similar interface with NMEA protocols. The connector is an unusual one (Megallans own presumably) and apart from doing the data interfacing it is also used for external power supply.

The interface/power cable is not very good value but a good homebrew version would be difficult. I think the interface is output only, so you can't load in waypoint or route data UYKB.

I don't know about SMC, though another Yaesu dealer claimed to know nothing
about the problems with the FT-5200 when I took the rig back to them last
year.

Yaesu Head Office definitely know; I copied a plethora of postings from
rec.radio.amateur.misc referring to various subsets of the same problems
on both the FT-5100 and the FT-5200

> >However, the transmit audio is still poor (both bands), the breakthrough

I only have one speaker connected, but it basically sounds like one of
the same faults that mine has (all the time, not intermittant), and was
one of the faults commonly discussed by other owners in rec.radio.amateur.misc

> I've filed your reply for future reference although I really do feel like
> forgetting this on and cutting my losses.

Me too. Yaesu UK have said that the rig is in spec, so that's the end of it. I just wish they'd come clean and own up to the fact that there are a large number of very dissatisfied FT-5100/5200 owners out there, instead of trying to sweep the problem under the carpet - if nothing else though it highlights the value of Usenet. Without it, I'd have believed them!

Air dielectric cable may be flexible but shouldn't be bent too much.

Even the act of making small diameter coils (like for a balun) will
cause the center conductor to move closer to one side of the shield
and the impedance will change.

Tying know will probably short it out!

>This garbage about calling or not calling "CQDX" is a joke!

Agree! Why would anyone care about this? I have been a ham for 25 years and
see nothing wrong with the practice, although, if someone stateside calls me
as a result, I will typically answer their call.

Actually, I prefer answering CQs to calling them, as then I can be even MORE
selective about who I talk to. This is particularly true on CW because I
dislike trying to work people who send with their left foot!

Calling CQ on 2 meter repeaters is fine. Don't let anyone tell you otehrwise.
For example, in my home of Dade City, Florida we have an active repeater on 146.88. So it's not unusual to hear someone cal CQ CQ 88 and then the callsign.

Another way is to simply identify by using your call sign and then adding that "your listening" Eithr one works..

Well, there is ONE good reason to retain the label, if only in advertising. When I ask a technically savvy guy if (s)he is a ham, I will often get back "No, I can't stand the code test." Saying right up front that this is a ham license without a code requirement might induce one of the technically competent that can't stand the code.

I, for one, remained a Technician for twenty years with a Masters in EE and working as a R&D microwave engineer because I couldn't stand that damned code. Got to 13 wpm for ONE DAY, passed the Advanced test, and couldn't key "cat" if you spotted me the c and the a.

My SO and I are about to take a four day cross-country car trip and we fully intend to do a drive-n'-study session so that she can pass her Tech exam the day we get home. Code? Not on your tintype.

Well, there is ONE place I think it is wisely used, and that is in advertising for a classroom study group for this license. Recently I asked my SO if she would like to become a ham (the usual inducements accompanying) and she said that "if it wasn't for the code...".

We are going on a four day crosscountry trip a week from today and when we get home on Thursday we hope to have done enough studying to pass the time on the trip that she will be ready for the VE session on Saturday.

I agree, on the air, Tech is the title. In ads, No Code Tech is the way to go.

The point I was making, and maybe didn't make it clear enough, is that
I respect a person more for their technical capability in theory than
the rote memorization of an arcane system of sending signals by puffs
of smoke, flashes of light, or dots and dashes.

Tech Plus means nothing more to me than a person with technical
knowledge took the time to learn a useless system of modulation.

Wait a minnitt!!!! Maybe I didn't make my point. My point was that I respect a person far more for the technical ability to become a Tech than for the rote memorization of an arcane system of modulation to become a Tech+.

Tech+ means nothing more to me than a person has taken a useless Federally mandated step to learn an outmoded system of modulation on their way in the amateur stairstep process. Sort of like learning Latin in high school.

Does anybody have a source for an online 2m repeater directory -- ftp
or www? I tried the alt.binary.watchamacallit place that was listed
in this newsgroup about a week ago and it was deleted before I could
get there.

If not, does anybody have a favorite ham store on the southwest side
of Chicago (Brookfield or thereabouts) or on the road from Brookfield
to Racine WI that they can recommend?

I'm driving X-C from Chicago to CA on I-80 next Monday, and I don't
think my '91 directory will be a whole lot of help.

Thanks, gang.

Hello all,

I have been looking for a few weeks now about modification information about this Radio!! Non of the many ham radio mod sites have anything about this radio.

Could someone... anyone, please post anything they know about modifiying this radio to receive 800 Mhz..

What I have learned so far:

- Cutting W1 will enable 118 to 136 MHz rx

- There is a bank of 8 suface mount diodes on the logic board under W1, 4 on the top row, all diodes installed, and 2 more diodes installed out of 4 on the bottom row. When these 2 diodes on the bottom row are removed (leaving no diodes on the bottom row) this enables expanded TX on UHF and VHF.

- There is supposed to be a mod available which involves running another piece of coax into the radio which will enable 800 Mhz reception. Does anyone have any information about this final modification, or the keypad prodedure to enable the VFO to scan these frequencies!!!

Please Respond If you have any information...

Hugh -

146.760- 88.5 PL

It's now part of a linked system (5-6 systems?) covering much of the SE quarter of the state. Another repeater linked to it is 146.610, in the Abajo mountains about 60 miles south of Moab. The Moab repeater is fairly wide coverage...

-Paul C. KG0CZ

Also...there is cellular coverage in the area. Given the nature of cellular, though, I wouldn't expect it to work very well in the numerous canyons and such. But, other than knowing it's there, I have no other experience with it in Moab. I was able to make a cell call from the San Rafael swell, about 40 miles west of Moab, so there may actually be excellent coverage in the area.

>> (You and I know damn well that's poor screening causing the audio stage
>> to take off but try telling them that).

I got this twice ! - Both times intermittent coming through the
internal speaker.

First time around, the rig went back to my local dealer, it was then
forwarded to Yaesu UK. The rig was less then 6 months old, and to say
I was unimpressed is an understatement. 2 weeks later it came back,
and it seemed okay at first, but of course, as the fault is intermittent
and I don't use 50 W on 2m very often, I didn't realise that it was still
there.

Excuse: Dry joints.

A couple of months later I noticed that it was still there, and took it
back. This time the rig was away for 6 weeks, and less than a year old.
I went into see my friendly local radio dealer, who all of a sudden were
not so willing to be helpful. A case of "We have your money now piss off",
I felt. They gave me Yaesu UK's phone number and told me to contact them,
(see my feelings about the dealer above). I did this and was told as said
in here, that because the rig was in spec, it could not be replaced. The
local dealer wasn't interested, because they would not have got a
replacement rig from Yaesu had thay given me a replacement themselves.
I had to phone this man at Yaesu several times at daytime rates, the
call not being local either, I had no use of the rig for 6 weeks, and
all they could do was say "Well we are looking into it, but as the fault
is intermittent we are finding it difficult to replicate the descibed
problem" and "...as the rig is operating within spec, we cannot replace it".
Christ, these people must be tight as arseholes, you would have thought
that after 4 weeks without any success most companies would have said
okay we will give you a replacement, but obviously not Yaesu.

Excuse: The PA block in this and some other Yaesu rigs is prone to
oscillation, we think that is the problem. We blew up your original PA
during testing, so it has now been replaced.

Well thank christ they blew it up ! The only thing that's not covered
in the Yaesu warrenty are the power semiconductors. I thought it was
most reassuring to know that not only the FT5200 suffered with this
oscillating PA problem !

>Mike * QRV around 0800 and 1800 most weekdays on GB3HL *
>G4KFK * (Hillingdon 433.075/434.675) and also 51.83 MHz *

Yeah, and me too. I could stand the fact that the rig went wrong,
(it happens) but I didn't think that I got anywhere near receiving a decent
service from Yaesu UK.

If I used 2m/50W a bit more often, I wouldn't be surprised to find that
the fault is still there (have not used it for ages now).

Personally I have decided to steer clear of Yaesu products in future.

Cheers and 73, Ian G0TLB.

Yes, the Magellan Meridian has a computer interface. It requires a special cable from Magellan. I think the protocol is NMEA, but I don't know the physical pinouts on the cable.

I have the Magellan Meridian, and it works ok for a handheld. Becuase it has few buttons, the interface can be tedious.

Though I just got my amateur license, I don't know what APRS is.

Oops. I tried replying from a terminal with a sticky CR key.

For what it's worth, PhotoCop was a registered trademark of Traffic
Monitoring Technologies which is no longer in business. It was
not a general name for photo radar.

No PhotoCop contract was ever canceled due to adminstrative paperwork or
clogged offices or traffic courts. In fact, the percentage of cases
that went to court was far lower with PhotoCop than with common radar.
My impression is also that the court cases were far more likely to
result in a conviction, too.

>behind the counter and the rest of the customers in the store.

If one were to make a public fuss over the request for personal
information, such as yelling or otherwise becoming rude, I agree with
you. However, I must point out (a) that "just doing a job" excuses
nothing as far as I'm concerned and (b) any form of insistence
after my polite refusal is nothing short of rudeness. If a sales-
person does not accept my polite refusal, they are a person being
personally rude to me, regardless of what motivates them. In other
words, the policy is certainly not the craft of the salesperson,
but the execution of the policy is; the "I'm just doing my job"
excuse has no value to me, and, in fact, can be offensive when
offered as a "defense" for rude conduct.

It is simple; when I decline to provide any information about
myself, I expect this request to be respected. If the company
puts the salesperson in this awkward position, it isn't my fault.
I may vote with my dollars elsewhere, but that doesn't get the
salesperson off the hook for treating me without respect.

[Hopefully my cutting down of the quoted text has not altered
the intended meaning; Val, please set me straight if it did.]

: >A fundamental question, I know-- can anyone tell me the prospects
: >for sporadic 6 meter contacts with an FM rig as opposed to SSB?

In my 1 year of experience with 6 meters, I probably made 10 times as many contacts on SSB than FM. SSB can work marginal band openings much better.

When there is a really good E opening, you'll find yourself competing with lots of folks on a small number of simplex FM channels, and the guys with more power are likely to stomp all over you. Whereas on SSB, you can move up the band and hear and be heard well.

Major openings also provide the opportunity to work distant repeaters. Unfortunately, you may bring up 4 or 5 repeaters simultaneously if they don't have PL tones enabled. It makes it difficult to operate hearing multiple courtesy tones going off when you unkey.

I'd recommend an all-mode rather than just FM if you want to work more dx. You will be able to work lots of places even with 10 watts at sea level.

Drew: The problem is that many of these people who mess up the bands never get caught. In fact
many taxi cabs in NY are using the ham repeaters now.
Much worse, drug transactions as well.

It would be helpful if there was some sort of control put on the
distribution of radios.

My two cents.

RS is FINE selling HTs to the public. In fact, where else will you find something like 4,000 service centers for your HT if it decides to stop working? The service centers may provide crappy, incompetent service (story upon request), but service is easy to find.

The real problem is the TURNOVER rate of salespeople. I go into my Burtonsville, MD RS store fairly often. Once a month, there's a new face and an old one is missing.

The problem I've noticed is that you'll say,

"Can I see the HTX-202?"

and they'll struggle to find it for a while "Which one is that?"

before you point to it "Third from the left"

and they hand it to you "Here you go."

Does Joe W. Newsalesperson have any idea you need a license? Of course not. They've got HUNDREDS of items to learn about, the HTX-202 of which is only ONE. The HTX-404 makes two. The HTX-212 makes three.

Out of literally THOUSANDS of stock items, the amateur gear makes up less than a fraction of a percent, which for the newbie salesperson is insignificant.

****

So in conclusion, next time YOU go into a RS store, ask about licensing for ham gear. If they just shrug, TELL THEM what it's about. They will generally appreciate the knowledge, and YOU have just helped to shore up a potential source of RFI!

JPM+>If so then it might be economical for me to go digital.
+>Thanks and 73,

JPM+>Joshua Morton

Nope. That was my first question too. Tons of reasons why this won't work..(disclaimer.."With ENOUGH MONEY involved ANYTHING is possible")..

- I don't think a TNC would 'like' telephone line voltage (the smoke might come out of the box, rendering it useless! (hi))

- TNC's won't "pick-up" when your phone rings, nor do they have the ability to dial..

- a TNC is built to control your radio (XMIT-no receive / then / receive-no XMIT)..

- My KPC-3 prefers that the radio be set to a certain volume for best results. You can't adjust the 'volume' of a raw telephone line (without adding a bunch of 'stuph' to the line - and the phone company would just LOVE that..)

- TNCs (that I'm aware of) wait for the radio's squelch to 'shut off' the speaker before they will allow data to be transmitted by you..

There are likely many other reasons why this won't work, but these are the ones that were pointed out to me when I asked the same question (but in reverse). Sorry to rain on your parade, pop your balloon, etc..

...But as soon as you feel you CAN afford it, you really should get one! You'll love it!

JH+>Scares the BeJeezus out of my wife.

N.B.: Whatever system you use - make SURE the contacts are TIGHT! I used to use an old camera flash unit. The bulb was shot and so wires were attached to the bulb terminals. We'd turn the unit on to charge-up (ready to flash) and fasten the battery to contacts which were embedded in a wooden base. Finally - hitting the "test" switch on the back of the flash unit would send the juice. You could actually feel the battery (a Sony NP-55 or even the others eg: NP-66 etc) JUMP! But if the contact wasn't solid and TIGHT - you'd send 'spizt &-sparks' across the room! Looked like someone was arc-welding! Needless to say the battery contacts were often rendered useless if this happened.

P.S.: This was NOT my idea - but most of the time, it DID work!

I had poor success with the GPS40 unless I was really in the clear, like
on the water. Standing in my yard, with trees around, but far from a
"forest canopy" produced bad results with the GPS-40.

The GPS-45 has a better antenna and it is removable, so
that you can use a remote antenna. For example if you want to run the
GPS in the shack. There was an article about building a patch antenna for
GPS in QST Oct 95, pg 44.

And in my catalog the GPS40 and the GPS45 are
the same price which makes the choice a no-brainer.

The information from the 1995 hamvention book lists the dates for 1996 as

"1996 May 17, 18, 19" this is on page 11

This is a week later than mothers day!

Unless the hamvention book is wrong?????
I have never gone to Dayton yet, next year if I can find a hotel room- 4 places I called are booked. They know the hamvention dates without even asking me what event i wanted to goto.

The new dates will let me go and do multiple things on one trip.

>: Radio Shack, in consideration of the amateur community, should
require
>: the customer to show them a liscense before selling these radios.

I see a few problems with this proposed policy:

1) This would eliminate a new ham from obtaining his/her radio prior to getting their ticket and being able to monitor the frequencies. Often, the best operators are those who have spent time listening and becoming familiar with the procedures before they begin transmitting. In fact, this would even prohibit new hams from getting their equipment AFTER they can transmit legally...the few weeks after their call sign is in the FCC computer but before the paper license is received in the mail.

2) This would prevent hams from receiving that much-wanted gift of a new transceiver for Christmas, birthday, etc.

Also, this policy would shift the burden of responsibility from the operator (where it belongs) to the store. A symptom of what's wrong with society today...always blame someone else instead of taking responsibility for your actions. If you are unlicensed, you know very well that it is illegal to transmit with the radio! If you choose to do so (and are caught), then YOU suffer the consequences. It's your fault. Not the store who sold you the radio, not the manufacturer who created the radio, not even the government.

>lights in their fields. Albert Einstein won his Nobel prize for something
>he did as an amateur. His profession at the time was patent clerk.

Do we have to go through this every 6 months? You pick an exceptional
case - he was not the norm. But even so, in the earlier part of this
century making new discoveries without formal training was not the
challenge it is today; the limits of knowledge were within grasp
of the amateur.

Those working in RF engineering *now* are not self-taught - they've
earned at least a 4-year BS if not an MS (at least 2 additional
years) in their field.

"Amateur" RF engineers, if they had the BS or MS, wouldn't be
"amateurs" - they would be working as professionals, for no one
would go through that 4 or 6 years of formal training "for the
love of it".

I contend that there are few, if any, amateur radio operators
that have self-taught engineering skills that come close to
those of the professional with his/her associated university
and OTJ training. Prove me wrong if you can.

>Demeaning amateurs because they are willing to work without pay
>is an insult to all those who have worked so hard and so long at
>their chosen avocation.

Ridiculous. Four to six years of 4 hours of class daily plus 4 hours
of homework nightly while attending a university cannot be compared

with the amateur's self-study methods. You're demeaning the professional by elevating the amateur. "Worked so hard and so long"? Is your amateur giving up many hours of sleep weekly for many years in preparation for exams, quizzes, homework, and completion of lab projects? Does your self-taught amateur worry about a GPA or project deadlines or final exams?

I supposed that you also believe there are many private pilots with skills equal to those of professional airline pilots. If so, then you ought to consider escaping from the little fantasy world you reside in.

I don't know about the MFJ, but most of these companies charge unfair
prices for owner's and service manuals. The key words I see here are
"no use for" and "photo copy of". Maybe he wants to save a buck!
This day and age anyone who wants to save a buck is NO DUMMY!
If he wanted to pay full price, I am sure he would have contacted MFJ!

So Gary, how about YOU writing some cutting edge articles?

Some of us "simpletons" aren't up to that level of knowledge yet, so you can't really expect us write the articles, can you?

Me, I LIKE homebrew HF gear. I can analyze and understand it in detail, fix problems, and see improvements. I can wire it up on copperclad without having to go through the hassle of etching or mail-ordering a board. My o'scope can see the waveforms without rounding off the little nasty glitches that break a circuit. It's pleasant to work with them, in other words. That's why I'm in radio, for fun.

> before I go buy it? One thing to keep in mind is that being in Alaska,

Take a look at the current thread FT-5200 PROBLEMS in rec.radio.amateur
.misc which details a number of problems with the FT-5200

The FT-5100 is essentially a 5200 without the remote front panel.

I have a 5200, and would not recommend them due to:

Very prone to intermod on both 2m and 70cm (I live and work near London,
maybe Alaska might be better).

Strange noises out of speaker when transmitting on 2m.

Reports of 2m PAs blowing up for no apparent reason from several users;
the PA is not covered under warranty in the UK.

Poor transmitted audio.

Prone to popping the LCD backlights.

Numerous reports of poor support from Yaesu UK and their appointed
distributors; clear evidence that they are denying problems exist with
the FT-5200 despite having received a number of faulty radios with
subsets of the same symptoms described above.

Source record: 236364

Hi,
I got a post card from the ARRL 6th District DX-QSL Bureau informing
me that they have 12 qsls for me. Should I send them a stack of stamped
self addressed envelopes so that then can periodically send me the QSLs as
and when they arrive. If that is the case could some kind soul tell me
the size of the envelope (6"x9" ??), the amount of postage, and what
should be written on the envelope (Name, Address, Call sign ?).
Once I send the envelopes what is a reasonable time frame in which to
expect current lot of QSLs to be mailed to me.

Thanks in advance,
Nat.

Date: 1995-10-27 00:00:00 UTC
From: matfrost@cix.compulink.co.uk
Message-ID: <DH4FC0.Iyp@cix.compulink.co.uk>
Source record: 236365

I was wondering if anyone could be of help to me?
I have to do an assignment about electrical noise, and I need to get hold of some information, especially about :-
Thermal Noise
Shot Noise
Partition Noise
Flicker Noise
I also need information on why a FET is likely to introduce less noise than a Bi-polar transistor.

If anyone could supply me with any information, or point me in the direction of some useful material, then it would be grately appreciated.

Matthew

1277. Scout Troop Needs Help!

```
Boy Scout Troop Needs your help!!
---------------------------------

Got an old XT your just sitting on? Wanna get rid of it
and help a great cause?

Boy Scout troop 4, in Dayton, Ohio, an inner-city troop helping
boys of all ages get off the streets and into scouting is in need
of an old XT system to aid in book keeping. A system with or
without a hard drive is ok, but need at least a monitor, keyboard,
and 2 floppies.

A cheapy dot matrix printer is also needed to print reports.

This would be a tax-deductible donation, with receipts provided.

If you would like more information, feel free to contact me via
this echo, or if you would like to call my number is:
(513) 259-0551.

Snail Mail is fine also. The Address is: Boy Scout Troop 4
1510 Darst Ave.
Dayton, Ohio 45403-2810

I am posting this message to spread the news about an all-new,
exclusive club targeted at the under-21 generations of radio
amateurs.
Young Hams of America is devoted to securing the future of our
hobby, and it has chosen to do so by instilling good operating
practice upon the younger operators who will inherit the airwaves.
Since the purposes of YHA go way beyond the young guys, everyone
is invited to join in these efforts. For more information about YHA
, please e-mail me at BM133@YFN2.YSU.EDU.
Thank you and 73 DE KE4PJB

If you haven't already, I suggest you read April 1994 QST, page 26,
which gives a simple design for a 1750 meter homebrew rig. Also
some pointers on operating this challenging band.

I often listen but have never heard any intelligent signals from
here in Ulster County, NY. Probably wouldn't reach you anyway...

Word from the League:

The September QEX "just went to the printers"; they're not sure when it will be shipped exactly. The October issue will also be late. "It's possible that you will get both in the month of November."

I asked if they were going to be caught up by November, or if they should just renumber the issues--whatever issue comes out by December is the December issue. I was told that by November "we hope to be caught up".

I woulk like to hear from amateurs using CT interfaced to Kenwood's TS-850S/AT. I will purchase a TS-850S/AT in a few weeks. I've receiced my registered version (9) of CT and would like to know more about the different interfaces between CT and the TS-850. What are the problems, what should I look out for, how easy is the interface.

Another related note. Can CT be used as a daily station log for all QSOs and can the contest logs be merged into the daily log.

Any information you can provide will be greatly appreciated.

The HTX-202 and 404 maybe has less sensitivity than these radios, but
the sensitivity is more than enough. The problem in the Yaesus, Kenwoods,
and Icoms is too much gain in the front-end causing the front-end overload
and intermod These radios ar famous for. Some newer radios now have
an attenuator switch to cut down on sensitivity when in high signal areas.
This seems to be a better way to have the best of both worlds.

Most commercial HTs that are immune to intermod also have sensitivity
that lacks compared to most ham HTs. An HT that has .3 uv or better sensitivity
is more than enough to use on repeaters. As long as you can still hear the
repeater when you have reached your limit getting into the repeater, so what?
If sensitivity is the main concern for simplex use, then get a mobile or base
rig. HTs ar for portibility and convenience, not for maximum performance.

>Nate, KB9LSX

Why is it illegal? I have to admit that with all the gear I've bought, even at other stores that sell ham gear, I've never been asked to produce a license. I wish I would have! What can we do to change that?

I'm not really sure that requiring a license to buy a radio would solve anything though, because there is a hamfest somewhere every weekend where people can buy used radios.

In our area, we have a suprisingly low incidence of this kind of thing actually causing a problem, but that's probably because most people that buy the units as CB's don't understand concepts like band plans, TX Offset, PL tone, etc, so they are never heard.

Most problems we have are from people that understand things enough to know they need to make up callsigns, and select an offset. Those people can also go into RS (or any other ham store for that matter) and say "sell me a radio". Someone in the area that doesn't recognize them on the air and usually finds them out through the QRZ database.

Since we have little control over who has radios, our club tries to deter people without licenses from using them. A decent deterrant (I think) is that our club has a transmitter hunt every month or so, and we're getting pretty good at it. It's also a common conversation topic on our repeater. Since we started the hunts, our incidence of malicious interference has dropped to nearly nil!

I'd rather have too much gain in the front end of my Yaesu HT's than
have a RS HT that works half of the time. We constantly see posts
about problems with these RS Korean HTs. Some people brag about
spending extra money for these extended warranties and how they have
been able to trade in their broken RS HT for a new temporarily working
model.

With my Yaesu HT's, I have never purchased any extended warranty. They
just keep on working. Why buy the RS brand 'x' when you can get
quality elsewhere?

Regards,

Duffy - WB8NUT

1286. Advice on 2M mobile rig w

Subject: Advice on 2M mobile rig wanted

I have had the Yaesu FT-2500M for about 6 months now and I think it is a
super radio. Intermod is really bad around here and the Yaesu is
virtually extinct from it. I did alot of research before I got the
radio because of severe intermod and as I said I am really happy with
the unit. Great audio, easy to operate and always good reports on my
transmissions. John.

1292. This Week in Amateur Radio #135 (for air through 11/3/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-27 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <hVNm5ED.sanderman@delphi.com>
Source record: 236381

Here is a summary of news items covered on edition #135 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 3-Nov:
-
1. FCC Rejects Requests to Reduce General Class CW Requirement
2. Alaskan Station Begins Regular CW Practice Runs
3. Cable TV Network to Carry Special on Amateur Radio Next Month
4. Commission Finalizes Plans to Close Field/Monitoring Offices
5. Joint Jordanian/Israeli Operation This Week Operating 4X7JY
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. "This Week in Amateur Radio" Moves Back to Standard Time
8. "The RAIN Dial-up" from Chicago
9. Upcoming Special Event Stations with George Bowen, N2LQS
10. "Amateur Radio Newsline" - Edition #950 from Los Angeles
11. Weekly Propagation Forecast
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the AREC Repeater Group, of West
Palm Beach, Florida, which carries "This Week in Amateur Radio" on
the WA4HXZ repeater on 146.67 MHz, and heard in West Palm Beach,
Fort Lauderdale, Jupiter, and the Bahamas. Satellite time and
uplink equipment have been provided by SKYVISION as a service to
the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EDT) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at
518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

There's a slight possibility that I might be moving to New Jersey within the next year. Do not know what community, yet. I am wondering how to easily find out what local antenna restrictions there are in any given community when beginning to house hunt. Is there a particular municipal agency which, in most communities, can give that information quickly? Are there realtors who are familiar with this issue? Any basic advice would be helpful. Please answer by email. Thanks, Steve, sdolmft@interaccess.com

By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

RB402 OPS - LOCAL LOG JAM 3/4; for release 10/30/95

Study the total communications of the local jurisdiction. Talk to the field people. Build a knowledge base on what systems do what. Find out what systems work, where, when and why. Study the local government agency relationships. You can do this without having to 'bother' the EMA people. In this process you become more informed about the jurisdiction. Slowly some 'picture' will evolve and you will discern means and ways your unit personnel can be of help. It may NOT be in 'passing traffic'! Not to worry. You HAVE to find a 'door' to the interest and desire (for participation) by the key EMA officials. Don't expect them to 'want your people' if they don't perceive benefits TO THEM that will save them work, help with their job, enhance their position, save their skin, get them out of a potential deep hole.

How do you get 'participation"?

Participation implies that the unit is called on to do something in advance of need as well as during an emergency. Sometimes lack of participation is due to agency officials who really do not see a need for [or want] the service of the unit. This can be because they do not know what the unit can do to help; or a bad experience with an "amateur"; or a belief that their systems won't fail.

Remember that few agency officials really know what an emergency communications unit can do. Only the unit knows what IT can do - which should be to provide any form or type of communications (not just radio traffic) in support of any form of need by and within local government. It's a matter of "mindset" and correlation between people, solutions and benefits.

One unit tried for years to develop a MOU with the local agency, but never succeeded. However, when one of them studied these bulletins and realized the significance of the ACS approach, he went to the agency and said "There are six of us that want to be a part of your agency." The response was: "Part of my agency, not some outside unit?" "Yes, under your jurisdiction - part of your agency". To that official that signified a benefit he wanted. Today they are involved and trained. The Radio Officer attends staff meetings weekly. (continues next week)

Yes. One is Intermatic Electra-Guard EG 240RC whole home surge protector.
Several years ago it was $87 at local electrical supply. I think GE has
something too.

I have an MFJ-1270b TNC-2 clone that had the wonderful XR2211 DCD mod done to it. (It enables you to run full-open squelch) However, I was using the TNC with an old Motorola Micor radio. Things worked fine.

Fast forward 1.5 years to now. I tried hooking up my Icom 2GAT handheld to the TNC with the MFJ cable. I installed Jumper K as directed and the radio would not transmit although the TNC was trying.

Ultimately, I found that the DCD mod was the culprit. It inhibits the TX signal from getting to the radio somehow. I'd rather not run without the DCD mod because it's nice to have the TNC know the difference between noise and digital info.

Has anyone else noticed this? If so, what was the fix? (other than another radio)

BTW, for those with this TNC, GET THE DCD MOD if you haven't! (and are not running an Icom HT) It will be the best $15 you'll spend in ham radio. The mod is a kit that takes about 45 minutes to solder up.

Bob N7PTM (time to fix the signature block)

>want to admit they got ripped off.
>
>Duffy

Hey, Duffy...I realize that the HTX-202 isn't the ultimate 2-meter radio on the face of the earth, but it's hard to beat for the price.

I bought one last month when they were on sale for $199. Where else can you get an HT that puts out 6-7 watts (on external power), has strong, loud modulation (I have to remember to turn the TV down when I key it up or it gets transmitted loud and clear), and a tight front end that's free of intermod (I can drive through downtown Charlotte, home to pagers, cell towers, and business band repeaters galore), and I have yet to hear a trace of intermod on my 202.

All this for under $200, and available in your neighborhood. Sounds like a good deal to me!

>should be written on the envelope (Name, Address, Call sign ?).

I believe the 6th District Bureau will accept cash and furnish you the envelopes and postage for a cost of $0.50 per ounce. I cannot be absolutely sure about their charges, but that is waht I seem to remember.

As for SASE, I like to have envelopes of approximately 5-1/2 by 7 (or so). Quite a few foreign cards will not fit in the normal business size envelopes. You can figure there are about 10 cards per ounce, so I would guess a 5 1/2 x 7 envelope would handle about 7 cards or so for the .32 stamp. I suggest you send one envelope with .55 (2 ounces) postage, and that should get you your 12 cards. If you then furnish a half dozen envelopes with .32 postage (at least until you figure about how many cards you can expect ove a month's time or so.

I try to send out cards about once a month or so. If I can fill an envelope, I will send it out. If I can't, I generally don't until I can fill the envelope to the max -- I refuse to send out only one card in an envelope unless requested to send out on a schedule. If someone asks me to send out on a set schedule, I will send out, even though he/she may have only one or even no cards.

Anyway, one way to get the scoop for sure is to drop a note to the 6th bureau and request their information sheet. Since each bureau is operated by volunteers, each one operates a little different! What I say about my bureau might not hold true for the 6th!

Aloha

Try looking for "Low Noise Electronic System Design," C.D.
Motchenbacher, J.A. Connelly; Published by Wiley John&Sons Inc. I
think this is the book I use at work. This is the bible for
electronic noise which covers all the topics listed above.

A FET is likely to introduce less noise in high impedance circuits.
This is due to the noise current that is present at the gate (base) of
the transistor. The book should go into depth about this subject.

Message-Id: <DH4wEt.49w@news.hawaii.edu>
Organization: University of Hawaii
Date: Sat, 28 Oct 1995 01:06:29 GMT

We've created a new email list devoted to homebrewing tube transmitters
and receivers (and associated equipment): Glowbugs. This list is a sort
of subset of the intersection of the Boatanchors and QRP lists.

To subscribe send an email to: listproc@theporch.com and only write:
subscribe glowbugs <your name>
and to unsub only write:
unsubscribe glowbugs

To send a message to the entire group use the address glowbugs@theporch.com

Topics include building with tubes, tube theory, xmtrs, rcvrs, power
supplies, antennas/leadins/tuners, skeds between members, homemade
components, parts suppliers, radio history, and anything else related
to the magic of Firebottles. Even for-sale/wanted-to-buy ads related
to tube gear are welcome.

For those of you into the "Heavy Metal" Boatanchor tube gear, then
don't forget the wonderful boatanchors@theporch.com mail list; to sub
send an email to listproc@theporch.com and only write:
subscribe boatanchors <your name>
and to unsub write:
unsubscribe boatanchors

-- Hello, everybody with a Yaesu FT-107M!

I have observed that the AGC on my FT-107M is a bit too slow for
working AMTOR/PACTOR, even in its so called "fast" mode.
Is there anybody out there who has any tip on how to modify the
FT-107 to get the AGC work a little faster? It works ok when I turn
the AGC off, but it would certainly be nice to have it on, because
as it is now, I am forced to ride the RF gain up and down as the
signal strength of the other station varies. Any other suggestions
of how to modify the rig to get a faster TX/RX switching are welcome
as well. I have looked everywhere in BBS:es and Mailboxes for any
kind of mods for the FT-107, but with no success.
Any help appreciated!

Best Regards

1309. Re: CQ on Repeaters. Correct?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-28 00:00:00 UTC
From: gfoley@freenet.columbus.oh.us
Message-ID: <46t6mi$sdf@acme.freenet.columbus.oh.us>
Source record: 236256

In the old old days (not the old old old days) legal transmitters were
crystal controlled, and crystals were expensive ($5 when the pay might be
$3 per day). Thus if you called CQ it was very unlikely that anyone who
wanted to respond would be on or near your frequency. This meant that
the only way to hook up was to call CQ, and make it pretty long, since
the other ham looking for a QSO had to tune the whole band looking for
a CQ. Likewise it took you a long time to start at your own frequency
and tune to the nearest band edge, listening to everything along the
way to see if it was for you, then starting again at your frequency
and going to the other edge of the band. If someone was in QSO on
a frequency you had a crystal for, this didn't let you call him
at the end of his QSO because he was hardly likely to be listening
on his own frequency for a call - he was listening on the other
frequency!
Some of my contemporaries haven't forgotten this, and still
call CQ without listening for minutes on end.
On FM repeaters, there is usually no problem with interference,
so it has become enough just to say you are "monitoring" or "listening"
or "Is anyone here?" but CQ is ok, just not customary.
73 and GL - that is, best regards and good luck, in repeater language.

I have seen this on ocassion on frequencies with birdies and with the rare
rig that produced very little white noise on open squelch. Perhaps
someone with 2211 savvy can suggest changes to the dcd filter that'll make
it less sensitive. Have you tried reverting to the onboard 2211 cd to see
if it handles things better?

Absent that, the fix may involve remove the mod. If the mod was needed
then there are probably other problems in the onboard demodulator.

:
: BTW, for those with this TNC, GET THE DCD MOD if you haven't!

: Though I just got my amateur license, I don't know what APRS is.

I think it means Amateur Position Reporting Service, and is a system or protocol for relaying positions, usually from GPS, by ham radio and plotting them on maps. On 2-meters it uses standard packet radio methods, and is often run on 145.79 MHz. It also operates sometimes on the HF bands. A chap named Bruninga or Bruniga (sorry, forget his WA4 or WB4 callsign) originated it and has written most of the software for it. The current models of most ham TNC's (Terminal Node Controller) have special provisions for executing the protocol automatically.

Well Scott, I'll tell you the same things I told Gary: Amateurs do not attend a university for 4 to 6 years to study electrical engineering and will not receive OTJ training, and will not spent 1/3 of their career-life working in RF for *no pay*.

One would have to be exceptionally in love with ham radio (and independently wealthy!) to go through the above sequence and decline any income from such work.

Take a tour of Icom, Yahoo, Kenwood, et al and tell us if you encounter any unpaid, self-taught engineers (i.e., "amateurs").

What can you expect when you have non-hams selling the junk. Our local
RS store will sell ham gear to anyone with the cash, they don't even
ask if you have a license....much less tell people they need one. I
saw a sign in a local RS store next to their 2M HT that said license
not required.

: 1. What does full-breakin and semi-breaking mean when
: speaking about CW rigs?

A full breakin (QSK) rig is one in which the receiver can recover quickly enough that you can hear other stations between your dits and dahs. A semi break-in rig is one in which means that it wants to be QSK, but wasn't designed well enough. :-) (Actually, it typically means that the rig can be operated ALMOST QSK, but will start to have problems when you operate at succesively higher speeds.) QSK allows good CW ops to have more "natural" conversations, because you can hear the other operator intterupt you while you're transmitting.

: 2. In CW QSO's, often time the call signs end with a "/" and
: a number. What does that signify.

The number is usually the call district that they're REALLY in, instead of the one that is implied by their callsign. For example, if I was in California, I might sign "aa2ys/6".

1318. New Email List Devoted To Homebrewing With Tubes

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-28 00:00:00 UTC
From: jherman@Hawaii.Edu
Message-ID: <DH4wCv.451@news.hawaii.edu>
Source record: 236265

We've created a new email list devoted to homebrewing tube transmitters
and receivers (and associated equipment): Glowbugs. This list is a sort
of subset of the intersection of the Boatanchors and QRP lists.

To subscribe send an email to: listproc@theporch.com and only write:
subscribe glowbugs <your name>
and to unsub only write:
unsubscribe glowbugs

To send a message to the entire group use the address glowbugs@theporch.com

Topics include building with tubes, tube theory, xmtrs, rcvrs, power
supplies, antennas/leadins/tuners, skeds between members, homemade
components, parts suppliers, radio history, and anything else related
to the magic of Firebottles. Even for-sale/wanted-to-buy ads related
to tube gear are welcome.

For those of you into the "Heavy Metal" Boatanchor tube gear, then
don't forget the wonderful boatanchors@theporch.com mail list; to sub
send an email to listproc@theporch.com and only write:
subscribe boatanchors <your name>
and to unsub write:
unsubscribe boatanchors

Source record: 236266

Hi!
I am downloaded file tcm3105.ps (Baycom modem schematic diagram)
from ftp.funet.fi. But I do not to view it on my monitor :-(
I do not know what program (for IBM PC) can transform this file
to image ?
May be you can help me buy one or few Baycom modems or base
elemente to build it (TCM 3105, 74HC04, 78L05, 4.43361 Mhz).
We make Packet BBS and all HAMs in our town asked me:
"What TNC is better ?"
"You can work without TNC" - answer I - "Use BAYCOM modem !"

Best regards

Igor Blakunov (YL2GKB)
Daugavpils, Latvia.

<k1oik@ccsnet.com> writes:

>"I never met a ham I liked" ......W.C. Fields circa 1942

Did he live that long? ha.

My favorite W.C. Fields saying is: "Hmm, must have been an Abyssinian
in the fuel supply."

This is kind of dated, since being a bastard no longer is considered a
social negative. (Even Murphy Brown had a bastard kid)...

What does it mean? There used to be a saying that when a blond family
had a child with dark hair, they would remark that there must have been
a nigger in the woodpile (nigger back then was politically correct, hell I
used to eat "nigger baby" candy when I was a kid. Anyway Abyssinia was
the former name of Ethiopia - i.e., black people mostly.

I went to a meeting of African Americans last week. They wouldn't let me
in the door! They said it was for African Americans only! Well, I commented
that I was an African American. Bullshit the doorman said, your as white as
David Duke! Sure I'm white, but I was born in Africa. Well sorry whitey, this
meeting is for blacks only. So you mean it's for Negros. No it's for African
Americans. Well I'm one. No, it's for Black African Americans. Doesn't that
sound silly I asked? What if went to a meeting of Irish Americans. Would they
have White Irish Americans and Black Irish Americans. Buzz of whitey, he
remarked. Don't you find it stupid to call yourselves African americans, when
there are many Americans born in South Africa? Door slams...

Just a thought...

How accurate is a GPS? I wanted to know if they useful for
determining altititude. Someone told me +/- 100'. If this is true,
it would not be useful for altititude, since you could be off by 200'.

Tnx,

Joe

1324. Shuttle Rebroadcast

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-28 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.11575.7585.0NFBB6CA@woodybbs.com>
Source record: 236271

Subject: Shuttle Rebroadcast

There have been many requests for "where do I find the audio for the Shuttle" on the forum. As mentioned earlier, the Goddard Amateur Radio Club (Greenbelt, MD) re-transmits the audio on a number of HF frequencies, and a number of Amateur Radio repeaters throughout North America also place the Shuttle audio on their output. This system is called "NASA Select Audio", and is usually pulled from a satellite feed or other direct method. This service is available on non-DoD missions. On some launches a video feed is also available, which is then made available on some ATV (Amateur Television) repeaters.

I have summarized those feeds that I know about below, I would encourage you to let me know of any additions or changes that you know about. Keep in mind the list will change as repeaters add or drop the audio. Also, the audio will be present only when there is activity, which is not constant, especially at night. At other times you will probably hear other Hams chatting.

> any unpaid, self-taught engineers (i.e., "amateurs").

In disagreement with your opposing the terms 'amateur' and 'profes-
sional', I have to point out several other assumptions in play here.

The first is that radio amateur is opposite to:EE. 'Tain't necessarily
so. What about commercial radio licensees? Where do they fit into your
scheme of things?

The second assumption 'professional' is necessarily signified by a $
sign. Again, 'tain't necessarily so. Admittedly, it's an exception, but
have you ever heard of Doctors Without Borders? Would you say that
doctors, nurses and others who work for that organization without pay
are not professionals?

They do their work for the love of it. It's nice to be paid, but
there are some things one does because it's a 'calling'. What one is
'called' in life to do is one's profession. Old fashioned, I know,
but there you are.

Was Gregor Mendel an amateur or a professional geneticist? He was a
professional monk, but that is beside?the point. Was Charles Darwin
an amateur or a professional biologist? Was Edison an amateur or a
professional engineer? Were the Wright brothers professional or ama-
teur aeronautical engineers? Was Robert Goddard an amateur or pro-
fessional space scientist?

The professionals, BTW, thought Goddard was nuts (and maybe he was). But Goddard had this vision thing, you see.

You called Coffman's example of Einstein working in the patent office an exception. It's not an exception at all. In fact, the history of science is rife with crack-pot amateurs who made advances. They had nothing to lose.

A little blurring of the false distinction between amateur and professional is in order. Amateur and professional are not opposites, they are marks on a continuum. Sometimes where to set the mark is not all that easy to determine.

BTW, was Gugliemo Marconi an amateur, a professional or just a hustster? (Maybe he was all three.)

If you want to continue this, I will offer you my own experience at working at a university for zero pay elmering EE students. It is satisfying. And yes, I consider myself both radio professional and amateur, attested by the FCC.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z OCTOBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 OCTOBER AND FORECAST FOR 29 OCTOBER - 31 OCTOBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 27 Oct
Daily Proton Fluence >1 MeV: 2.3E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.3E+07 (normal)
X-ray background: A1.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Oct 30 Oct 31 Oct
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Oct: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 27 Oct
Learmonth 2 2111 0011
Fredericksburg 3 6
Planetary 8 6

Observed Kp for 27 Oct: 2111 2321
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Oct 16 Unsettled
30 Oct 20 Unsettled to active
31 Oct 30 Active to minor storm
COMMENT: IPS Geomagnetic Warning 27 was issued on 27 October and is
current for interval 31 October to 5 November. Active to minor storm
periods expected 31 October - 5 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Oct normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Oct normal normal fair
30 Oct normal fair fair-poor
31 Oct normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
28 Oct 11

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for October: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
29 Oct 15 Near predicted monthly values
30 Oct 10 Near predicted monthly values
31 Oct -15 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 27 was issued on 27 October
and is current for interval 31 October to 3 November. Degraded HF
comms conditions expected after 31 October.

I had good luck with 2 code programs, super morse & morse academy.Both
are available via online services and bbs's.They are also available via
ftp , sorry dont know the sites.Try oaland.edu I belive I read a post
sometime ago stating that this was a site that had these programs.
In addition to the computer programs I was able to tune into code
practice on a local 2meter club station,sandiego area.I also copied code
on my HF rig.This was very helpful as the code tests rarely sound like the
computer generated QSO's.Practice 20 to 30 minutes a day,no more! Many
claim that marathon practice sessions cause one to loose their "edge"
copying code.Good luck KE6LZS

>How accurate is a GPS? I wanted to know if they useful for
>determining altititude. Someone told me +/- 100'. If this is true,
>it would not be useful for altititude, since you could be off by 200'.

It's worse than that, I'm afraid. The inherent accuracy of an unaided (as opposed to differentially corrected) GPS position measurement is something like 15 METERS for a 95% probability level. However, the military introduces random errors into the time codes sent which intentionaly degrade the accuracy to about 100 meters in the latitude and longitude plain. The altitude value is even less accurate, at about 150 meters at the 95% error level.

I was involved with the development of a GPS based marine navigation product. Originally, we planned to display the altitude reading along with lat and lon, since it was available from the GPS receiver, and seemed like it might be useful. This idea was scrapped when we realized that boaters already know that they're roughly at sea level, and that seeing their position reported as 400 feet below sea level might either disturb them or reduce their confidence in the other position information.

Sorry for the bad news.

Why would anyone go to such extraordinary lengths to buy ham radio
equipment from a supposed ham radio dealer? You wouldn`t buy a car
from a dealer that gave you that level of customer service, you`d seek
out
a knowledgeable competitor to buy from. There are many fine ham radio
dealers in this country who know their products, and have equipment that
is better and cheaper than non-ham literate competitors. If having a
store
on every corner is that important, maybe the mfgrs should start selling
through convenience stores and gas stations. Just think, you could fill
up,
get a carton of milk, and buy that new HT! Seriously, if you are
willing to

put up with what they offer, then you are rewarding bad service.
Ultimately,
they might be your only place to shop, if present trends continue. Have
you
noticed how many ham radio dealers have disappeared this year?

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. Amateur Radio Newsline is a audio news service distributed via telephone.
This hardcopy version is produced by Dale Cary - WD0AKO from scripts provided to him weekly by Newsline. It is then distributed to on-line services, bbs networks and internet user jointly by Dale Cary and Steve Coletti.

Editorial comments, news item and all other business should be directed to:

Bill Pasternak, WA6ITF
Newsline Producer & Editor

Internet E-mail: 3241437@mcimail.com
MCI E-mail: WESTRADIO
Phone: (805) 296-7180
Fax: (805) 296-7180
(Fax senders wait for voice prompt.)

Hardcopy comments or complements can be directed to:

Dale Cary, WD0AKO
Hardcopy Distribution for Newsline

Internet E-mail: wd0ako@rrnet.com
MCI E-mail: DCARY

Phone: (218) 236-6324

The audio version of Newsline can be recorded from one of the currently operating lines listed below. This list is kept as accurate as possible. If any changes are not listed, please contact Dale Cary - WD0AKO at the above listed addresses.

The following is a QST

The FCC says it will close its high frequency monitoring
system, the IARU meets in Canada and turf war between FM and fast
scan television may be an unplanned side effect of lots of new
No-Code hams. They want more FM while ATV'ers want respect. Hear
both sides of the conflict on an expanded Newsline report number
950 coming your way right now!

(*****
FCC TO PROCEED WITH CLOSINGS

The FCC says that it will go forward with a field office
restructuring plan that will close down most regional monitoring
centers to save money. The plan, submitted to the Commissioners
by FCC Chairman Reed Hundt last August automates the FCC's network
of airwave monitoring stations while at the same time reducing the
number of field offices and field personnel in the Compliance and

Information Bureau.
Under the now approved scheme, nine separate currently staffed high frequency monitoring stations, and three additional monitoring sites within FCC field offices will be shut down. The FCC says that Technological advances permit the replacement of these monitoring stations with a national automated monitoring network by the summer of 1996.
The plan also establishes what the FCC calls a new national Call Center. The Call Center will, for the first time, enable the public anywhere in the United States to call one toll-free number to reach the FCC. This to get information or to report complaints.
The FCC says that, under the arrangement, authorized staffing in the Compliance and Information Bureau will decrease by about one-third by the beginning of Fiscal Year 1997. The plan also requires an investment of 5 to 7 million dollars in equipment and personnel in fiscal years 1996 and 1997. That may sound like a lot of money until you realize that the Commission estimates that this one time purchase will save more than 8 million dollars annually thereafter.
And what hams are probably wondering the most. What will this mean in regard to catching and punishing rules violators? The Commission says that even with the changes that its field enforcement activities will be maintained at current levels. Hams know that this means little or none.

(*****
CW SPEEDS TO REMAIN

The General class code test speed will remain at 13 words per minute. This, after the FCC denies three requests to lower the Morse code requirement for that class of operator license.
The requests, in the form of letters, came from three Technician-Plus class licensees. All three petitioned that the 13 word per minute Morse code requirement for the General Class license be lowered to 5 words per minute. Two of them also asked that the Technician-Plus operator license class be eliminated. That all holders of Technician-Plus licenses be grandfathered to General class operator privileges.
But in an Order released October 19th the FCC says that the current amateur service license structure and examination requirements were developed in accordance with the expressed desires of the amateur service community. This, through numerous rule making proceedings that generated many thousands of comments. The FCC says that the amateur service community indicated on each occasion that it strongly desires to preserve communications by telegraphy. And after considering the views expressed in those proceedings, the Commission adopted the rules that are codified in Part 97.
Based on this history, the FCC concludes that the petitioners have not presented sufficient evidence to justify revisiting these

matters at this time. Its not known if any of the three hams will file appeals.

(*****
ATV VS. FM

Another intermode battle is brewing. This one on the 70 centimeter ham band where two groups of operators, amateur television users and FM operators are at odds.

Codeless technician amateurs may not have intended to start a battle, but they seem to be involved, anyway. The controversy started last spring. That's when the Mid America Coordination Council decided to phase out fast scan amateur television operations on the 440 MHz band. The reason given, so that more spectrum can be made available for increased use by FM voice and other narrowband interests. FM users say they need the space so they can set up more voice repeaters to accommodate the flood of codeless technicians joining amateur radio every month. In most parts of the U.S., the 2 meter band is already saturated and in many areas, UHF frequencies are getting busier, too.
But ATV operators, including those who have operated on the 430 MHz band since before the first FM voice signal showed up, say not so fast. They say they won't move higher in frequency. And they say neither the FM community nor their repeater councils have the right to tell them to leave. Supporters of ATV point to FCC rules part 97.305, subpart C. That section authorizes fast scan amateur television and other wideband modes on the 70 centimeter band and above. ATV operators say that, with or without the blessings of the Coordination council or any other FM repeater frequency coordinator, their personal home stations will be staying on the air, right where they are.
Some ATV operators indicate they are even willing to take the issue to court if they must, so that they can keep their slice of the 70 centimeter spectrum.

The clash between ATV and FM seems to be hottest in the territories that fall under the umbrella of the Mid America Coordination Council. Last spring, MACC voted to stop coordination of Amateur Television repeaters in the 70 centimeter band. It did not ban them, but it did request that they consider moving to bands higher in frequency.
Many ATVers complained about this decision so at a meeting held in St. Louis just prior to the national repeater coordinators conference, MACC voted once again. The results were the same. A non-binding recommendation that MACC member states no longer coordinate fast scan ATV repeaters onto the 70 centimeter band. And with this second affirmative vote against ATV, it could spread to other parts of the country as the ham radio airwaves continue to fill up. If nothing else, it appears as if definite battle lines have been drawn between the two modes.

(*****
HAM RADIO AND MORE

Speaking about repeaters and frequency coordination, please tune into the Sunday October 29th edition of Ham Radio and More hosted by Len Winkler, KB7LPW. Len will have as his in studio guest our own Newsline producer, Bill Pasternak, WA6ITF to discuss, among other things, the recent meeting of the nations repeater frequency coordinators and what the outcome of that meeting may mean to the average ham in the street. Others subjects that might come up for discussion include the developing "twin societies of ham radio", that being the hams who passed CW tests isolating themselves from the no-coders and vice versa. Also, plans for next years 10th anniversary Newsline Young Ham of the Year Award, the 1000th NEWSLINE report in December of 1996 and if time permits, an update on the making of the ham video "Always on the Air."
Ham Radio and More originates from the studios of KFNN radio in Phoenix, Arizona. It is heard at 6 pm Eastern Time on sixty-six stations of the Talk America Radio Network. The show also airs on tape delay over WWCR shortwave on 7.435 Mhz.
For information on where you can hear Ham Radio and More in your area write to Len Winkler, KB7LPW, Post Office Box 9219, Phoenix, Arizona 85068. Or if you prefer electronic mail address it to lenwink@indirect.com.

IARU MEETS IN CANADA

Amateur Radio societies in the Western Hemisphere have concluded their triennial meeting. Numerous important topics considered. These included band planning with emphasis on 40 meters; growing Internet use by amateurs; electromagnetic compatibility of consumer devices; improved communication between the International Amateur Radio Union and its member societies; and implementation of the hemisphere's International Amateur Radio Permit. A permit known simply by the initials IARP.
Twenty nine national Amateur Radio organizations from throughout the Americas were represented at the week long conference in Niagara Falls, Ontario in late September. The gathering was hosted by the Radio Amateurs of Canada.

(*****
MAINE TEACHER OF THE YEAR

The 1996 Maine Teacher of the year is a ham radio operator. Robert L. Maurais, KC1IV, an industrial arts instructor at the Frank H. Harrison Middle School in Yarmouth, was chosen for the honor on October 4th.
KC1IV's selection was made by Raymond H. Poulin Jr, Maine's deputy commissioner of the Department of Education, and Peter Geiger, vice chairman of the Maine State Board of Education. This the first such honor for KC1IV. In 1993 Maurais was the

recipient of the Maine State Christa McAuliffe Fellowship Award. In 1994 he received the Walt Disney Company's "American Teacher of the Year" award.
Maurais, an ARRL registered instructor and the 1992 ARRL Instructor of the Year, was picked from 17 candidates recommended by local nominating committees. His father Jerry Maurais, WA1BMG is also a ham.

NEW FROM CQ

CQ Communications plans a mid-December debut of a new magazine, CQ VHF. Veteran Publisher Dick Ross, K2MGA, says that CQ VHF will serve the specific needs and interests of hams whose operational and technical interests exist primarily in the world above 50 MHz. To accomplish this goal, Ross has named Emmy Award winning producer Richard Moseson, NW2L as the Editor in Chief of CQ VHF. Moseson tells Newsline there will be a mix of articles for the new ham as well as the more experienced operator.

"It's going to be a, hopefully well rounded, well balanced magazine with a combination of technical articles, operating articles, beginners articles, construction projects and revues, news, you name it. If it has to do with VHF or UHF or higher, it will be there." Moseson

For those of you not aware, Rich Moseson is no stranger to the world of ham radio publishing. After spending a good part of his adult career as a news and special affairs producer for the CBS television network, Rich quit the rigors of the New York corporate establishment to devote his talents to the world of Amateur Radio. He joined CQ publishing in 1992 and since then has produced an entire library of video presentations aimed at the new hams and hams to be. This year, he was the editor of the 50th anniversary commemorative issue of CQ magazine that many hams have dubbed to be a true collectors edition. With this kind of a background, you can bet that CQ VHF will be rather unique.

(*****
CQ CONTEST MAGAZINE

CQ Communications also will introduce CQ Contest, beginning in January 1996 and planned for ten issues a year. The editor of CQ Contest will be World-Wide Contest Director Bob Cox, K3EST. A spokesman for the publisher says that one of the principal goals of this new publication will be its international focus, scope and depth while concentrating on coverage of people, analysis, techniques, reporting and technology. Publisher Ross adds that these two new niche new magazines in no way signal the abandonment of reporting on either of these specialties in his flagship CQ magazine.

(*****
P3D DELAY

From AMSAT, word that the launch of its Phase 3D Amateur Radio satellite has been set back from May to September of 1996. The satellite is manifested on the European Space Agency's Ariane 5 Flight number 502. But the agency now says that tests on the launcher's cryogenic main stage that have been under way in French Guiana are still not complete. This, due to problems that have called for changes in the design. These changes will delay upcoming launches 501 and 502.
Meanwhile, all major contractual issues are now complete for the launch. Phase 3D International Satellite Project Leader Karl Meinzer, DJ4ZC, made the announcement at the annual AMSAT meeting held in Orlando, Florida the weekend of October 7th. The final agreement establishes a firm cost, schedule and technical baseline for the launch. The contract includes a launch price of about $1 million in U.S. currency. AMSAT says that contributions so far from individuals and organizations around the world will cover the first installment of the launch bill, about $800,000, which is due on November 1st.

(*****
NASA SCIENTIFIC BALLOONS

In case you were not aware, it seems that hams are not the only ones launching experimental edge of space balloon flights. So are many college students in concert with NASA. And while hams worry about radio signals, groups of students are launching the latest technology on these flights.
The first of two NASA scientific balloon missions carrying payloads designed and built by college students through the NASA Student Launch Program were conducted Wednesday August 23rd from the Goddard Space Flight Center's Wallops Flight Facility, at Wallops Island, VA.
The first balloon, launched at 2:26 p.m. EDT carried an upper atmospheric research payload for three participating universities in the Virginia Space Grant Consortium. The 95 pound payload included a water vapor density surveyor and an atmospheric sampling experiment.
The astronomy payload from the University of Pennsylvania was launched at 7:05 p.m. EDT. The 150 pound payload was developed to image star fields. Both payloads flew on a 197,000 cubic foot balloon. The Virginia payload reached an altitude of 96,500 feet and the Pennsylvania payload flew to an altitude of 90,800 feet.
The purpose of the NASA Student Launch Program is to provide undergraduate students with an opportunity to gain experience in all aspects of managing suborbital missions.

(*****
DX

In DX, 9K2HN, will activate from Kuwait this new prefix using the call sign 9K0A. Depending on propagation, he is active on 20, 17, 15, 12 and 10 meters. QSL via 9K2HN by the bureau or direct.
Also, WB2YQH, the publisher of the 599 DX Report, will be active from Smith's Parish in Bermuda as WB2YQH/VP9 on 80 through 10 meters, including the WARC bands. Emphasis will be on CW. QSL to WB2YQH direct and include an S.A.S.E.

(*****
CALGARY

Closer to home, the Calgary Amateur Radio Association has a group of hams that are compiling a list for packet and digital related information. If you would like additional information on this service contact VE6HMT at VE6YYC or howard at hmt.cuug.ab.ca via the internet.

(*****
NO QUACKING

This from VE3NDX coming to us via packet radio. Joe tells about reports in the Canadian Press that tell about an Australian man was fined $2,000 for quacking like a duck on his radio transmitter. No, we are not kidding. $2,000 for going quack, quack on the air.
The fine was levied after the man pleaded guilty to operation and possession of unlicensed communications equipment. In addition to the fine, he was also ordered to forfeit the equipment to the government.
Joe adds that the guy is probably very lucky. Lucky in that some duck hunting ham didn't get him first.

(*****
NEWSLINE LISTENER SURVEY REMINDER

A final reminder of the Newsline bulletin stations survey that's been going on during the month of October. If you are a regular Newsline listener, please take a moment to jot down on a post card or QSL card:

1) Your name and address.

2) The call sign of the repeater or bulletin station issuing Newsline in your area.

3) Its frequency or frequency pair.

4) Along with the day of the week and time of day that Newsline gets played.

Then mail your report to:

Dale Cary, WD0AKO
1310 34th Avenue South, suite 103□
Moorhead, Minnesota
56560-5162

Or you can e-mail your report to Dale via the Internet to:

wd0ako@rrnet.com

We will close the listing requests on October 31st. If all goes as we hope, by Christmas we will post a complete list of stations airing Newsline to our various sites on the Internet and to our home page on the World Wide Web.

(*****

For now, with Bill Pasternak, WA6ITF at our editors desk and Dale Cary, WD0AKO at the survey desk saying 73 and we thank you for listening.

1335. AM/FM Radio w/Digital Presets

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-29 00:00:00 UTC
From: rflood@ici.net
Message-ID: <46uugv$a9r@crusher.ici.net>
Source record: 236282

This probably isnt the best groups for this, but I havnt had much lucking finding this type of radio in the usuall electronic stores. I figured somebody in this group might know of a radio like this .....

Im looking for an AM/FM radio in the $50 range with digital presets. No CD, Tape or remote. Just a plain am/fm radio. I want it for work, so anything more exspensive and I would be too worried about it getting stolen at night. You can get a digitaly tuned walkman, but no am/fm radios. Has anybody seen anything like this in the $50 price range.

TOA

-Rich

>too far. Please help, and thanks for all replies! Please respond by

Probably the single most important part of learning the code, and increasing
speed is this: EVERY DAY!!!! Don't skip all week and spend two hours on
saturday to "catch up". Fifteen minutes a day EVERY DAY! A good time is
right after dinner...should take a little break then anyway.....Another
way is on the way to work....a tape recorder in the car with CW on the
-to-it that does the trick.

>
>What about differential GPS?

Differential GPS is good for about 10 meter accuracy. Perhaps a bit worse in the altitude reading, but not much. The problem is that the differential raceivers are still a bit pricey, and that stations transmitting the correction signal that they require aren't operational in all areas. I'd expect both of these problems to be rectified before much longer, at least in the US, Europe, and other high-tech countries.

There's also a technique called carrier-phase differential GPS, in which the phase of the signal from the differential signal transmitter is used to fine-tune the position fix obtained using the standard differential technique. This can provide centimeter level position accuracy. However, the equipment gets very expensive, the recieving station has to be stationary, and of course a suitable transmitter has to be availible, and its location has to be known to at least the desired accuracy, or the best that can be done is to obtain a location relative to this fixed position.

There is quite a bit of interesting technology used in the GPS system. If you're interested in this sort of thing, I'd recommend you find a good book on the subject. Some of the GPS manufacturers offer literature which in addition to explaining why whatever they make is better than what anyone else makes, cover the rudiments of GPS. Make a few calls, do a web search, or check with your favorite librarian. There's plenty of good information available, and if you're a regular on rec.radio.amateur, you would find it facinating.

-- John Kodis.

October 30, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KX2A, KB4TUW, KQ4GC, KI6WF, ARRL Special Bulletin, ARLA Alberta Amateur Bulletin, DF4RD, DL4FDU, F6AJA, HP2CWB, DL9GOA & DX News Letter and G4BUE & The DX News Sheets for the following DX information.

4U1ITU, ITU HEADQUARTERS. F5PAC and others will be active from 4U1ITU from November 3-5th. They will be active on all bands, CW/SSB and satellite.

4X AND JY JOINT OPERATION (UPDATE). The joint Amateur Radio operation by both Jordanian and Israeli amateurs planned to begin October 25 has been postponed according to the president of the Israel Amateur Radio Club. The planned operation still lacks issuance of a call sign and proper permits from the Israel Ministry of Communications, said IARC President Joseph Obstfeld, 4X6KJ. (For complete news release, read ARRL bulletin ARLX065.)

7J1, JAPAN. Bill, KQ4GC, will operate from Japn using the callsign 7J1AWO, during the month of November. Emphases will be placed on 80 meters. QSL via CBA.

A4, OMAN. From November 1st to December 31, 1995, all A4 stations will be using their callsigns followed by /25 to Commemorate the 25th Anniversary of National Day. On this occasion, the Royal Amateur Radio Society (ROARS) has introduced "The Silver Jubilee Award". The award will be issued to any licensed amateur station that qualifies by getting 8 points. A special event station will be active during the third week in December signing A43SJ and it counts as 3 points. Club stations A47RS/25 and A47OS/25 counts 2 points, and other individual stations count as 1 point. Contacts with the same station on different band or mode double the points. Send your certified Log Copy to: Awards Manager, P.O. Box 981, Muscat, Sultanate of Oman, Code 113.

EY8, TAJIKISTAN. Karl, DL4YT (K4YT), and Ron, DL4FDU (NP2AQ), will be active from November 6-13th (as their work schedule permits). They will operate as EY8/K4YT and EY8/NP2AQ on all bands 80-10 meters SSB/CW. QSLs for EY8/K4YT go to K4YT, Karl Renz, PSC-115 (ESC), APO AE 09213 and for EY8/NP2AQ to NP2AQ, Ron Maples, PSC-115 (ESC), APO AE 09213.

J2, DJIBOUTI. Tom, J28ML, and other amateurs are planning a DXpedition to a small island (name or IOTA number is unknown at this time) that is part of Djibouti. The DXpedition will begin operation on December 8th and end on December 14, 1995. The callsign will be J20RAD. There will be several stations active on 80-10 meters including the WARC bands. Operations will be SSB, CW, and RTTY. QSL to the Djibouti bureau, PO Box 1076, Djibouti, Djibouti.

NA-170. Ricardo/HP2CTM and Jose/HP2CWB will activate two or three islands from the Archipielago of San Blas Island Group November 4th and 5th. They will be using these special callsigns: 3F0T, H80T and HO0T each on a different island. Activity will be on 40-10 meters including the WARC bands on CW and SSB. QSL via HP2CWB direct to Jose NG Lee, P.O. Box 728, Colon, Republic of Panama or via the the HP Bureau.

PACIFIC DXPEDITION. Nao, JE7RJZ, will be active from Palau as KC6JZ from November 15-17th, and after that from Guam as WH2M until November 19th. Nao will mainly operate in the satellite mode via AO-13 (and AO-10, but it depends on AO-10's battery) and CW on the HF band. QSL via Nao's QSL Manager JA7FWR (Hat) direct or via bureau.

QSL MANAGER CHANGE. Activity by the Florida Contest Group using ZF2DX has changed their QSL Manager from K1KNQ to KG6AR.

S2, BANGLADESH. The DX News Sheets reports that Mine, JA2NQG, will be active from Dacca after his operation in Nepal (as 9N1CT or 9N1NQ), from January 5-12th (1995). Mine will be active as S21ZZ and with an emphasis on 160 meters (Just like his Nepal operation. See OPDX.227).

S7, SEYCHELLES. The trip by Gerard, F2JD, that was reported by OPDX earlier this month, has been delayed until November 10th. Gerad plans to stay there for 4 weeks before moving on to Madagascar.

T32, EAST KIRIBATI. Paul, WC5P, will be active as T32BE from Christmas Island in CW on all HF bands from November 14-28th. He plans to be an entry in the CQWW DX CW Contest. QSL via CBA.

TJ, CAMEROON. Be looking for Darek, TJ1GD. He is a young, energetic Catholic priest and avid ham radio operator who obtained his Cameroon ham ticket in late August. Also, Darek mentions that a second licence should be granted to another priest soon (callsign TJ1SP). The Church authorities have purchased them one radio, a Yaesu FT-840. The report sent to OPDX indicates that Darek has a simple beam antenna for 20 meters, but at the present time when propagation on 20 meters is poor, his signal could be weak (ed. NO QSNs were provided with this report). Darek's QSL manager is: Andrzej Kluja, SP9CLQ, ul. Aleksandry 9/25, 30-887 Krakow, Poland. ADDED NOTE: Darek would be very happy to get any antenna matchbox and power amplifier to set up operation on 160-80-40 meters. Anybody

willing to help out can contact him at the following address:
Rev. Darek Godawa, P.B. 40 Bertoua, Cameroon, Africa.

TT8, CHAD. Paolo, TT8BP has been known to show up on DX Nets. Check the 14270 DX Net around 2200z and the 14247 DX Net around 2100z. QSL via IK5ANP.

VK9, MELLISH REEF. Steve Salmon, AA6LF, continues on his around the world sailing trip and plans to be active from Mellish Reef. Look for Steve to begin operations as VK4ALF/9 on October 29 for four days. He will also sign VK4ALF/9 from Frederick Reef, which is part of the Coral Seas Island Group. This will be a new IOTA number. So, look for this operation to start November 5 for two days. QSL AA6BB.

VK0, HEARD ISLAND (Schedule Changed). The following is an edited excerpt from a press release by Bob, KK6EK, and Ralph, K0IR, in regards to the Heard Island Expedition: The Heard Island DXpedition team has encountered transportation difficulties. The advance team inspected the vessel chartered by the group and found it to be unsuitable for the intended voyage. Rather than compromise safety, the group has elected to re-schedule the expedition for early 1996..... The whole DXpedition team will be in Australia on October 29th. There are alternative vessels available. The group will work on contracting with one. All of the expedition's equipment is in Australia and safely stored. Losses were incurred with this incident, but fortunately they were financial losses and not losses of human life or safety. If you sent a contribution to: The Heard Island Expedition, P.O. Box 563, Waite Park, MN 56387; your contribution is intact. No contribution checks have been cashed. Losses have been born by the expedition team members. The DXpedition team is determined to make this happen. They promised to keep everyone informed. They hope everyone continues their support because it is extremely important to them now. (ed. The full unedited press release will be sent out via the OPDX Mailing List to all subscribers.)

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

>will be DX. Next will you call CQ ham operator?

Wrong. Other hams on Oahu island are *not* DX to me. Other hams in
Hawaii are *not* DX to me. Nor are the folks on Kure, Midway, French
Frigate Shoals, Johnston Is., Palmyra Atoll, Christmas Is., Pearl and
Hermes Atoll, Laysan Is., Lisianski Is., Necker Is., etc. etc. etc.

You should brush up on your geography, OM, before you call anyone's
actions "stupid".

>
>I would suggest a little motivation to go to your school's library.
>There I am sure you will find a lot of useful material. You should
>be able to appreciate that.
>

Obviously I went to the College library, but all 6 books had been taken out by members of the course who had received the assignment the previous day. The main central library was burnt down a year ago, and is currently being re-built. Sadly the majority of the technical books were in there, not the local librarys :(
If I want a book I have to buy it, so I want to make sure it is any good first.

It is a sad fact of life but customer service in the consumer world is dead. One must do their own homework before buying anything. Radio Shack has a number of stores that are well placed. You have to know what you want, and expect the sales person to do nothing more than ring up the sale. Sad but true. If you have this kind of attitude you will not raise your expectations to high.

>
>Sure they demonstrate technical knowledge, not *much* technical
>knowledge of course, but certainly *some*.

Theoretically you would expect this to be true, but I know directly of many people who have passed the Tech written who have no detectable technical knowledge. I think the reason for this is that there is a threshold effect involved in learning our (or any other) technical matter, and elements 2 and 3a are so simple that one can study all the material in them without ever reaching that threshold where the information "clicks" and becomes a unified whole in one's mind. The gaps and simplifications in the Tech elements are so great that a person who studies that material and no other will have knowledge that is more anecdotal than comprehensive, and the latter is IMO a requirement for claiming technical knowledge, as opposed to a smattering of unconnected facts and rules tumbling around in one's mind.

There are, of course, Techs who do possess technical knowledge, gained in school, work and/or through personal study. Nothing I have said is meant as a disparagement of any Techs, only as a criticism of the low standard of testing we now have for a large and permanent license class which awards so many privileges.

Hi Joe,
I use three different types of GPS and the question of how accurate they are is
a bit like asking how long is a piece of string !!!
It depends on a number of factors, avialable sattelites, path to them, type of receiver,
how many channells and so on and so forth.
Of the types I use the most accurate is the Trimble TNL2100 Approach. This gives an
official accuracy of +/- 300 feet. As you quite rightly said not much use for altitude,
however there are things such as differential GPS which receives signals from known
sources such as land transmitters. It then knows where they are exactly and works out the
error from the GPS sats., the accuracy can be as good as 10 feet.
GPS of this type can be so accurate as the FAA are trialling GPS based Instrument landing
systems which will give hands off landings for aircraft.
You also have to be aware that the signals from the GPS satellites are deliberatley
downgraded for civilian use. This stops other military powers taking advantage of
the targeting capabilities.

One last point, not many altimeters are better than 100 feet accurate, if like in my
aircraft when you are on the ramp it can show that I am 75 feet underground on the QFE
setting !!!!!

Cheers Joe CULTR

Right. I respect those who hand forge iron, even though factory
worked steel is typically better in quality and more cost effective,
simply because they have mastered a difficult craft. However, I
don't think that implies that others should be *required* to
master that craft, especially when there are better alternative
methods. The same applies to Morse users and Morse exams.

I'd like some opinions on the Icom 2000H mobile rig. I ordered one
yesterday. Thanks for all replys!

73 de Tom - KB2SMS

I have been running a 2000H for a few weeks. It is into a Larsen
mount 2/440 through glass antenna. The rig does a great job, the
alphanumerics are nice and it is sensitive on AM aircraft receive.
We have three airports in this city and I can listen to
approaching planes at all three. I have been very impressed and
think you'll be pleased. Mike WA8JDW

This is like saying the Yaesu Ft990 is essentially the Yaesu Ft100d,
without the extra receiver.

The 5100 came out before the 5200. There were some engineering
changes in the 5200.

I own three 5100's. I also own one 5200. I highly recommend the 5100
to people, as it is a solid radio with many features that would
otherwise cost you extra in other radios.

As an add-on note re the C508A: Note that the radio does NOT have a keypad! You must use the Select switch and save frequency+offsets in memory for quick access to any frequency.

I too, have found that standard alkaline AA bateries last about a week for standard amateur use.

I use it mainly as a scanner on my desk at work, and being near powerful repeaters, it works pretty good for about 1/4 watt.

You can buy an SMA (UHF connector) to BNC, in Boston at You-do-it Electronics ($5.75+tax).

All in all, it's pretty neat toy.

K6STI has just released a RTTY program that uses the sound blaster 16 for I/O. Program uses DSP techniques in the software to do adaptive filters and will really dig signals out of the noise. Brian has a demo version that I have placed on my FTP server which includes complete documentation. It is available by anonymous FTP from n6nd.nosc.mil in hamradio/rdemo.zip . 73...

I know it varies from store to store, but, recently when I
asked to "see" the 2M handheld at a local store the salesperson
immediately responded by telling me "you must be a licensed
amateur radio operator to transmit on this radio." He was NOT
a ham (I asked him).

No, I would not let Tandy know that one has worked this long. They may have to reduce quality even further so they can continue selling those extended warranties. If word got out that the HTs may actually work for two or three years, they may not rip off, I mean sell, people those extended warranties.

Joe,

GPS would be useless for determining altitude. GPS triangulates on
government satellites to provide latitude/longitude (x,y) coordinates.
GPS does not provide z values (altitude) at all.

jmusto@neca.com wrote:

>The first is that radio amateur is opposite to:EE. 'Tain't necessarily
>so. What about commercial radio licensees? Where do they fit into your
>scheme of things?

Are you asking about broadcast engineers? Professionals, of course.
Are you asking about licensed technicians? They are professionals
in their field, of course.
Are you asking about maritime radio operators? Given the apprentice
training required, and that ever person onboard their has their life
in the radio ops hands, they are professionals in their field.

>The second assumption 'professional' is necessarily signified by a $
>sign. Again, 'tain't necessarily so. Admittedly, it's an exception, but
>have you ever heard of Doctors Without Borders? Would you say that
>doctors, nurses and others who work for that organization without pay
>are not professionals?

Workers in DWB have professional careers in which they take a leave
of absense from to conduct their medical work abroad. The minimum
8 years of college an MD undergoes classifies him/her as a professional.
I sure wouldn't want an "amateur" doctor working on me no matter what
Third World country I reside in.

>Was Gregor Mendel an amateur or a professional geneticist? He was a
>professional monk, but that is beside?the point. Was Charles Darwin

>an amateur or a professional biologist? Was Edison an amateur or a
>professional engineer? Were the Wright brothers professional or ama-
>teur aeronautical engineers? Was Robert Goddard an amateur or pro-
>fessional space scientist?

Just like Gary you're providing early-century examples of when
new discoveries *were* within reach of the amateur. Today, the
only amateurs I hear of who are still making new discoveries are
amateur astronomers.

>The professionals, BTW, thought Goddard was nuts (and maybe he was).
>But Goddard had this vision thing, you see.

How about some more recent examples to back up your conjecture?

>You called Coffman's example of Einstein working in the patent office
>an exception. It's not an exception at all. In fact, the history of
>science is rife with crack-pot amateurs who made advances. They had
>nothing to lose.

...back when the body of knowledge was such that discoveries were within
reach of the amateur (see above). Let's move into the 21th century
where this discussion is taking place.

>BTW, was Gugliemo Marconi an amateur, a professional or just a hust-
>ster? (Maybe he was all three.)

All three: He began as an amateur which he developed into a profession
and ended up becoming a greedy and dangerous man. I've read a great
deal about the history of maritime radio comms and am sad that
lives were lost at sea due to his greed of ordering his Marconi ops
to ignore and even jam maritime radio traffic originating from
non-Marconi ships and stations.

That's another early-century example because you can't provide
present-day examples.

: Lombardi's 1st Law of Business:
: Companies succeed in spite of their best effort. If they succeed at all.

Just this past week two different state police officers were able to purchase 2m handhelds to be used on the state police freq. here in the Rochester area. They were told (I was with one of the officers) that seeing that they were not going to be used on the Ham bands that the radios did not have to be licensed. I thought that was strange and also I was told at another RS store that the use on the police freq. was not possible. I did see the radios in operation and I guess with a small change the bands can be changed some.

Again the clerk at this one store stated that the ham radios and CB radios were the same. It is very interesting.

I did receive the name and address of the local district manager and will be sending out a complant letter this coming week.

Just like you to blame everything on radio shack employees. Well, perhaps you shoud think before you speak...3 out of 4 employees at the radio shack I work at are Hams....In fact, I know alot of hams who work radio shack. Obviously you are basing your opinions of radio shack on a few bad experiences, or blaming us for things over which we have no control. Guess what these are symptoms of? Ignorance.

P.S. It's unlawfull to require an amateur radio license for the purchase of amateur gear, however illogical that seems.

It wouldn't be legal here Orville.

In any case, I thought Micom were in Guildford, not Farnham?

Super Morse (public domain; anon ftp all over the place) has some
great speed-building modes, such as one which gradually increases
speed while you copy English text. You can also set it up to do
Farnsworth (fast characters, longer spaces) which is a good method
to build up your recognition speed.

Why would a link to a licensed U.S. packet station be illegal? Do you
opine that all the existing wormholes and satellite links are also illegal?

Weird, but as a non-packet user, I really don't care if you turn away such
a very very kind offer. Of course, others may feel differently about your
kicking a gift horse in the teeth and then lecturing him on geography.

Take a vallium and have a lie down Tony.

As you might have noticed from the full text of my posting, I know the
Micom organisation intimately.

They manufacture VOICE/data/LAN networking equipment and Orville has posted
similar requests for linking voice repeaters here before (and they *are* in
Guildford :-)

Orville, if you haven't already QSY'd, regards to all at Micom from all
at ITS Euma :-)

FFTMORSE works for CW. I've never seen anything similar for RTTY which
is odd because it seems like an ideal application; maybe somebody else
out there knows of one (in which case tell us here please!)

I'm not sure about ftp sites, but you'll find FFTMORSE on The CQ Centre
BBS on Slough (01753) 595468. Downloads are free, and you'll have
download access on your first call.

Check your wording again! You made no mention of linking PACKET stations.
You asked for sysop of any REPEATER systems. Big difference! Possibly a
legal one too.

Your museum will thank you for that last disclaimer bit, if not for the
rest of your posting. GPS receivers "triangulate" on up to four SVs and
give a very nice vertical solution. It is not as good as the horizontal
solution *only* because of the disadvantageous geometry (you get no SV
available for a pseudo-range from below the location to be determined.)

>Advanced Class Amateur, ran the repair facility our shop had at the time.

>Hardly a droid.

I've worked there, too. Hey, I'm not blaming the employees as much as I blame Radio Shack corporate for their ridiculous corporate policies, their "programming" of people, and their poor compensation package which causes them to quickly lose the few good, technically knowledgeable people that they attract in the first place.

There are a few intelligent people working for Radio Shack, no doubt about that. But they are the exception, not the norm. I mean, who wants to stick around a place where you've got corporate constantly watching over you like Big Brother...especially for the princely sum of $5/hour?

For every Advanced Class ham that works there, I can show you 10 more who don't know the difference between a keyboard and a motherboard...or (worse) the ones that tell you that no license is needed for 2-meter or GMRS equipment.

>marble, or whatever else as far as it is not too expensive. I do not
>have anything other than an ordinary hand-drill, by the way. I would
>appreciate any suggestion. Thanks!

I use a wooden board, about 1/2" thick, 8" wide, and 2' long. I lay
the board horizontal in my lap when sending code. The key is attached
to the upper left-hand corner at a 45 degree angle, with the base in
the corner and the knob pointing at the 4 o'clock position. This way,
I can send with my left hand (resting the base of my hand on the
board), and have a small notepad on the right-hand side of the
board with a pen in my right hand to copy. (I'm one of those
weird people who write right-handed but send code with my left
hand -- everyone else I know uses their writing hand to send/
receive code -- I never figured out why, doesn't their hand get
tired from all that work? :-))

The good thing is, should the board get ruined for whatever reason,
I just pick up another piece of pine, attach my key, and away I go.

ARLB100 Morse requirement stays

ZCZC AG67
QST de W1AW
ARRL Bulletin 100 ARLB100
From ARRL Headquarters
Newington CT October 31, 1995
To all radio amateurs

SB QST ARL ARLB100
ARLB100 More requirement stays

On October 23, the 1995 World Radiocommunication Conference, WRC-95, opened in Geneva. As described in November 1995 QST, page 106, one of the matters expected to be raised at the conference was a New Zealand proposal to delete from the radio regulations of the International Telecommunication Union the requirement that amateurs demonstrate Morse code ability in order to be licensed to operate below 30 MHz.

On Tuesday morning, October 31, New Zealand offered its proposal in Working Party 4C. While some other administrations expressed support, most who asked for the floor either opposed the change or said the time was not right and the issue needed further study within the amateur community.

Summarizing the discussion, the chairman of the Working Party said that most comments opposed the proposal and that he would send the matter to the Working Group of the Plenary, which is responsible for agendas of future conferences, to consider adding it to a future agenda in 1997, 1999, or later. This was acceptable to New Zealand.

WRC-95 is scheduled to complete its work on November 17. No conference decision is final until it has been approved in final form by the Plenary, usually late in the conference.

Amateur Radio is represented at the ITU by the International Amateur Radio Union. Present at WRC-95 are IARU president Richard Baldwin, W1RU, secretary Larry Price, W4RA, and Region 1 vice chairman Wojciech Nietyksza, SP5FM. ARRL Technical Relations Manager Paul Rinaldo, W4RI, is a member of the United States delegation, and other national delegations also have Amateur Radio representatives.

1403. Land Mobile Radio FAQ needs your input!

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-31 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <4760ev$ibj@mrnews.mro.dec.com>
Source record: 236195
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

[I'm including part of the Motorola listings from the FAQ at the bottom, so you all can get a look at how it's presented, and what info I need. I need to do a lot of cleaning up and organizing of this somewhat scattered listing format!]

The Land Mobile Radio FAQ is now under way... I need your support!

What is it?

A listing of those surplus police and taxicab radios from the various manufacturers, how to identify them, what band they're on, how easy it is to tweak them into the ham bands, average price used, etc., all in one file for your flea market shopping convenience!

What it's not is a mod manual. You won't find out HOW to do the mods in the FAQ. That's up to you. You will find out where to get the manufacturer's manuals, most of which have detailed tuning procedures. Some of the radios can only be programmed by the manufacturer, and/or by using the manufacturer's proprietary software. Such details will be in the FAQ.

I'd like to include any and all mobile or handheld radios aimed at the commercial or public service market. Many of these out-perform the imported synthesized units by a long shot, are cheaper, and make great ham rigs! Let's put these great radios back to work and on the air!

I NEED YOUR INPUT TO MAKE THIS A REALITY!

You don't need to mail me manuals or anything like that, unless you WANT to. All I ask is a few bits of data for any of these radios you or your friends may have worked on in the past. If you've put one on the air, you've had to answer these questions, so fill 'em out and send 'em in!

Model? Manufacturer, model name (like Mastr II, Syntor, Delta, etc.), model number

Band? These radios are usually made for use in a specific band of frequencies, like 30-50 MHz, 150-170 MHz, 450-470 MHz, etc.

Freq control? Crystal, synthesized/ROM programmed, synthesized/microprocessor programmed

Average price? What did you pay? What prices did you see when shopping? New or used?

Manual price? How much did the manual cost?

Mod difficulty? How hard was it to get it tuned to ham band?
Easy: re-crystal, tweak a few tuning screws
Difficult: program a new ROM, swap a few parts
Extremely difficult: Major modification and re-design
of some circuits, you must pay
authorized technician to use
manufacturer's software

How to indentify? What details do you need to know to tell these radios
apart? Does the serial number tell you anything? Does
the Model number? Are there physical differences?
This is the stuff you need to know when sorting
through the radios at the flea markets. This
information is usually in the manufacturer's manuals
in great detail.

I will re-post this notice about every other week for a while, until the FAQ
is somewhat filled out.

My net address is: randolph@est.enet.dec.com
All information, network pointers, periodical references, anything, is
appreciated, and thanks in advance!

-Tom R. N1OOQ randolph@est.enet.dec.com

1404. Diamond Antennas - Still Around? Who Distributes?

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-31 00:00:00 UTC

Greetings,

Does anyone know if Diamond is still making antennas? I've been "off the air" for over a year - due in part to vandalism to my truck. I had excellent results with my Diamond dual-band antenna. Are they still around? Who's their major U.S. distributor? Any other recommendations for a mobile dual band (V/UHF) antenna? All help, hints, contact info is appreciated!

: >real people running it rather than politicians I may reconsider.
:
: Gee, Dan, when you consider the subscription cost of any other
: technical magazine, ARRL membership is, and has been, a great
: deal. If you count everything else they're supposed to be doing
: for us, it's a really great deal. You avoided joining the League
: over *10 cents a week*. That just about buys a stick of gum today.
: Now I do sympathize with the idea of supporting a family on a
: small budget, I had to do it on less than $4,000 a year back
: a long time ago (before food stamps and other Great Society
: giveaways), but I still think I could have found a dime a week
: somewhere.
:
: Now the League person who told you about the life membership
: was trying to do you a favor. If you plan to live a long time,
: it saves you a *bunch* of money. But you are right that he wasn't
: directly addressing your complaint. Considering the cost of paper
: and postage, the League didn't really have a choice about raising
: dues. It was that or fold the magazine. The ARRL has a better record

: of keeping dues as low as possible than any other professional or
: semi-professional society I can name. He should have explained that
: to you, of course, but considering League officers are *unpaid
: volunteers* who spend most of their spare time servicing people
: like you, he may have felt your complaint was unjustified. (Staff
: is paid, below prevailing rate, but the elected officials aren't.
: They do get some expense money, but I've never met one who wasn't
: out of pocket for a significant amount.)
:
: I have political differences with the League, but I don't have
: any illusions that they are ripping us off financially. They've
: been very prudent in that regard over the years.

I was really short of cash in about 1965. The IRS called me in because I had deducted all but $25/week on which we owned a house, a car, a Ham radio station, bought food for a family of 4, and paid for college tuition. (It took the dumb IRS agent 45 minutes to understand that the deducted expenses were from cash reserves saved in prior years.) The orginal ARRL membership was a Christmas gift from my parents in 1948; renewal came at Christmas time. I cut corners everywhere! Convert life insurance policies to annual payment and save 12%. Wait for payment warning notices because those enevlopes were postpaid -- save 4 cents. Put a scrap aluminum sign on the floor of my car so my feet won't get wet when I drive through a mud puddle. Change 4-ply car tires when you can see you have worn through the first two plys. Yet, I could not come up with the $6.25/year dues nor could I allow my membership to lapse! My only shot was getting life membership with deferred payments.

It is now forty years later and I am retired and have long since absorbed the life membership payments. I have been enjoying FREE membership in the ARRL. I feel I knew my priorities in the 60's! Here in 1995, I don't think it is reasonable to spend money on on a solid state radio to replace a tube type radio until after ones life memberhsip in the League is taken care of. How dedicated are you to the hobby?

73, Dick Wilder, K3DI wilder@clark.net NEcluster: >W3LPL

PS-- The orginal was posted to multiple groups. This is against my normal use but did want the orginator and those following this to receive my comments. ..... Dick, K3DI

My reply to Burt is as follows :

Think before you speak. First of all I do not speak for my province. I
speak for myself. You have no right to state that I have no love lost
for the French. How would you know, since I have never expressed that
opinion !!!

Buy the way (since you have an answer for everything it seems), what is
your view on the clearly racist use of the N word. Do you accept it's
use or not. Judging by your response here, I am led to believe that you
find it an acceptable practice.

>Two things. First, this HT is a "mini". It has a mini antenna, a mini
>battery, and a mini speaker. That means you're going to get mini range
>and/or mini transmit time, and the speaker fidelity will probably be mini.

I have one of these little beasts I use in the SF bay area. Betty (my SE)
& I can choose from the many repeaters here to cover her commute, be it
SF (North) or SJ (South). We manually cloned them for ease of QSY
without WingNuts (TM) following us about (yes, with only 0.28 W out,
jamming [sigh] can be a problem).

The battery life is, in fact, awesome. Using a couple of AA alkalines
will run it in mostly receive, some transmit for three days easily.
Since the transmit draw is about 300ma, you can key down for 3 hours
on a fresh set of cells. Standby receive draw is only 11ma (at a
4:1 sleep:receive ratio) and actual receive is 30-40ma.

>That's OK for your wife if she needs something to call for help with if the
>car conks out in town, but don't plan on yacking for an hour on the local
>repeater with it, unless you plug into an external power source. And

There's no connector for external power, and 3v is all the little
devil would eat anyway.

>if you stray very far from the repeater, you'll need to plug into an
>external antenna, like a mag mount.

To do this with commonly available magmounts, you need the SMA to BNC
adapter. I have a friend with the C108A (the 2m only version) that
does a very good job this way.

>And if you drive with the windows open, you need an external speaker.

Audio _is_ a problem in a vehicle with the windows down; for such
occassions I got one of those earpiece earphone/mike combo doodads.
(You _could_ just buy the wife one of those ultra-quiet Lexus things... :)

Sorry, but I know nothing about using the 508 outside the ham band
other than to tell you that the antenna is deaf as a millpost
(_not_ the radio) outside the 2m band (e.g., 162.55 WX is a no-op
with the stock antenna).

Best regards,

Bruce

>The battery life is, in fact, awesome. Using a couple of AA alkalines

I use Ray-O-Vac renewals, for which I can get 10 decent recharge cycles
before pitching them, depending on how patient I am. I haven't tried
Eveready AA lithiums but suspect they'd last well into forever.

>Audio _is_ a problem in a vehicle with the windows down; for such

I use one of those car cassette audio adapters - sony made mine - you
shove a cassette-like thing into your player and plug the 1/8" phone
plug into the HT's external speaker jack. Works great, get as much audio
as my car radio gives, and in this mode the HT audio gain is lower anyway
saving a bit more power. At a volume setting between 1 and 2 there is no
distortion and tons of available volume from the car cassette player.

Anyone know of a 2M inline amplifier that is intended for 1/4W drive
level? I think VOCOM or someone made one, but that's 10 years ago.

A.R.S. is, of course, the abbreviation for Allied-Radio-Shack, the
former name of your favorite vendor, just after Allied Radio and
Radio Shack merged.

>
>Mike
>KB0JGS
>MMiller@netins.net

Well, you're a ham, aren't you? Get out your VOM, and do a continuity
check.

If you take off the plug jacket and examine the solder terminals,
you may be able to follow them into the base and observe that the
base is made of concentric sections. The inner-most section extends
furthest out the plug (the tip). The solder tab that is longest is
almost always the ring (ground).

On most plugs, the solder tab lengths are in the order of plug
conductor. Thus, the longest solder tab is the ring, the next is
the middle section, and the shortest is the tip. If the two shorter
solder tabs are the same length, follow the tabs to the base of the
plug, and you may see that one goes inside the other, the inner one
being the tip.

Good luck.

Not to worry Dana. You're pretty close there.

I've had instances where customers who seem to want to argue with SOMEONE, ANYONE. If these poor souls cannot find a wife, children or friends to argue with it seems they come to Radio Shack as a last resort. It's not real often, but it's often enough. They'll find some kind of nit to pick and then see how far they can push the sales people. Often, it's the N&A. Last weekend it was a cluttered corner. Sheesh! I try to laugh it off but some Radio Shack sales people are human beings with egos of their own. They take offense to being the but of someone's demeaning humor and then an incident occurs.

Hey folks, if a company's policy offends you then do the *FREE*MARKET* thing. Go somewhere else. If their policy isn't so bad as to make you do something that drastic (After all, we all need the occasional 2A fuse on Sunday afternoon) then find some way to deal with it. I just wanted to put in my two cents about taking it out on the poor guy

or gal that is put "in this awkward position".

Come to RS #01-6358 in Center Line, MI and ask for Val. My N&A is usually around 98% so I can afford to let you slip through with a polite "I'd rather not." ... but don't tell anyone ... okay?

Hello...

I am the communications officer for the Blue Ridge Mountain Rescue Group located in Charlottesville, Virginia. We are part of the Appalachian Search and Rescue Conference.

I would like to get in contact with ARES/RACES coordinators primarily in the state of Virginia, but also West Virginia, Maryland, Pennsylvania, and North Carolina. What I am trying to do is put together information for our OPS kits, so that we know who to contact for additional assistance during search and rescue emergencies. Use of repeaters in local areas would also be beneficial.

If anyone knows who I can contact for this information, it would be great if you could e-mail me at lauren@virginia.edu

Thanks,

Lauren Schiff

1421. DXtreme Amateur Radio Station Log System, Version 2.0

Newsgroup: rec.radio.amateur.misc
Date: 1995-10-31 00:00:00 UTC
From: dxtreme@ix.netcom.com
Message-ID: <4741ir$283@ixnews6.ix.netcom.com>
Source record: 236213

DXtreme Amateur Radio Station Log System(TM)

Designed for HF DXers, this affordable logging program lets you maintain
a database of your contacts and track the DXCC performance of your station.
DXtreme(TM) features attractive, easy-to-use screens, and a full range of
inquiries and reports.

PC/AT-compatibles, MS-DOS 5.0+. Only $29.95 plus $3.00 shipping in NA.
Write for data sheet. DXtreme Software, 26 Langholm Drive, Nashua, NH 03062
(dxtreme@ix.netcom.com).

Thanks and 73,

Bob

1422. Schematic needed for Kenwood TR-7400A

Fellow Yams,
I am in serious need of the schematics for the
VCO unit (X50-1370-10), and the PD unit
(X50-1380-10) for my Kenwood TR-7400A. I have
all of the other schematics for this rig, but
for some obscure reason, Kenwood decided not
to include the schematics for the phase lock
loop in the Users manual. Grrr...

Yes, I know I can fork out $25 or so for the
service manual, but I'd rather not if it can be
avoided! If kind soul out there is willing to
make a copy of these schematics, I'd sure
appreciate it. I will, of course, be willing to
pay copying and postal charges.

Thanks!

>problem with having the two of them right next to each other (inches
>apart)?

Well, you might get away even with 1/4 wl on two, but expect some strange effects like detuning. Try to keep them as far apart as possible.
No touching!

The 6 m vert will work for FM as well as SSB during sporadic E openings, since by sporadic E the polarization gets scrambled anyway.

Both the HF and the 2m SWR meters will probabely allow you to determine the SWR, (see if results are consistent!), but will not allow you to measure the absolute power output.

We tested these bulbs and found that they do generate plenty of
interference in the 2.2-3 MHz band. We asked the FCC (through the NTIA)
to place a warning label on the packages to warn people of the
interference in that frequency range. We are also asking the
International Maritime Organization to prohibit use of these bulbs aboard
Solas vessels. We found that the harmonic contents of these bulbs are
attenuated enough so as to not cause problems in the HF band.

Hi fokes,
If you want to talk about selling mailing lists you need to
go no farther than ma bell, my sister moved into a new
apartment notto long ago , because she is single my
sister wanted a non published phone. Well U.S. West here
in Arizona charges real money for that. So when she signed
up for personal phone service, she gave them a phony first
name. Under this phony name it took only one weel to get
junk mail. She has figured 70% of her jukn mail is sent
to this name. I do think something needs to be done.
She does get a few telemarking calls a week also to
this name. And the new phone book was not due out for
another eight months. I dont mind being on lists where
I do bussness, I really like to get the catalogs.
BUT I HATE TELEMARKTING CALLS.....
I hope I did not get to far off the thred but I wanted
to add my peice...
Sorry if any one is offened...

Ed,
GPS does indeed provide altitude. However, it is not anywhere near
as accurate as the lat/long values. I think it may even be more than Joe's
figure of +/- 100' accuracy. Of course, 100' change in altitude is MUCH
more significant and crucial than a 100' change in horizontal position.
This is why is has taken a long time to get auto-land systems based on GPS
installed in aircraft. Military GPS receivers can get better vertical
accuracy, but it's still not as good as lat/long.

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac?

Upgrade Fast! Simulate the test and get S T I M U L A T E D!

Scores of 90% or > even get applause!

The new Macintosh Ham Test Simulators are HERE (and THERE if you can FTP)!

o Novice Ham Test 5.0 SA.sea
o Technician Ham Test 5.0 SA.sea
o General Ham Test 5.0 SA.sea
o Advanced Ham Test 5.1 SA.sea
o Extra Ham Test 5.0 SA.sea

The latest version "5" feature:

HyperCard 2.3 as a stand-alone application (SA) eliminating
your need to have HyperCard. All you need is a Mac with 4
Meg of memory and version System 7 or greater.

Each version "5" Ham Test Simulator has the latest questions
as prepared by the Question Pool Committee.

Each version "5" Ham Test Simulator is FREE OF CHARGE and work the
same way as the originals did (written by Diana, KC1SP).

You may obtain a version "5" Ham Test Simulator by mailing me a *FORMATTED
disk (1 per test) and include a Self Addressed and Stamped disk mailer for
the return.

Each version "5" Ham Test Simulator is also bundled with a shareware CW
program called MacMorse 1.4 written by Doug, WB0EON.

Also included in the version "5" collection are text files that relate an interesting variety of ideas about the best way to study CW and prepare for tests.

Or warm your phone line and get JUST the tests:

America On Line - Macintosh Ham Radio Section

or:

Connect to my home page via the WWW http://www.mv.com/ipusers/wd1v

or:

I'm wiring a 2.5 and 3.5 mm radio shack phone plug (274-289, 274-284)
and I'm not sure which terminal is which. The 3.5 mm has three terminals:
a 3/4 inch outer, and two smaller terminals. They match up to the sleeve,
ring, and tip, I'm just not sure which.

Your assistance is greatly appreciated.

Drew, now you are trying to stereotype all RS employees as droids. In 1972, when I was a high school senior, I worked for a short time for RS. I was an Advanced Class Amateur, ran the repair facility our shop had at the time. Hardly a droid.

I lapsed and just got back into the hobby after talking to a local RS employee who was an Extra, designed ATV equipment, wrote programs for controlling many of the new radios and is active in the 1296 band. Hardly a droid. He was retired from Rockwell and still had a life ahead of him. Just because you were a RS droid and all the people you associate with are droids, DO NOT blanket the RS people with the claim of being droids. Every area seems to have a different lifestyle and personnel. A good manager is usually not the best engineer, but he does now how to organize and follow the COMPANY rules. If they want to succeed that is what they must do. My local RS has both, so your stereotype doesn't fit. Most RS stores have both, maybe you are just drawn to the droid characters???

>so (and are caught), then YOU suffer the consequences. It's your fault.
>Not the store who sold you the radio, not the manufacturer who created
>the radio, not even the government.

Well, a not so good point. I agree that unlicensed people that buy the radios with the knowledge and intent to transmit illegally know what they're in for. But what about the folks that really think ham radio operators are the guys with the CB linear amplifiers they hear on their phones and TV's? According to quite a few posts in this thread, a great number of RS employees fall into this category. If they think they are buying a high-tech CB, then why should they think what they are doing is illegal?

I think it *IS* RS's responsibility to help their customers select a product that suits their needs, whether it is a stereo, a cell phone, or a ham radio. That is impossible if some of their sales people don't even know what these things are!

Quite a few RS employees in my area are hams, so this problem isn't too bad, but for the benefit of the areas without this luxury, why can't RS require that all its people pass a simple 25 question test with topics like: "The main differences between HAM, GMRS, Business band, cellular, unlicensed 49MHz, and CB radio are...". RS now sells all of these radios.

My letter suggesting this is already on the way to rs.customer.relations@tandy.com.

Hello Mike.

It seems you have met drew. Just some freindly advice, ignore him totally.
He was asked nicely not to group (stereotype) all RS salespeople as "droids",
and after arguing his point, basicly refused.

If you continue to challenge him (even with facts) or disagree with his
views, he will hurrle insults and call you names. He attacked me so much, I
had to have my server lock him out of my mailbox! He has now publicly
threatened to sue me (LOL), no less than 4 times.

Just some friendly advice Mike. Take care, & 73. :)

I own two 5100s. I bought them primarily because I already had good
experience with Yaesu FT-530 HTs. They both seem to work fine for
me, but one of them failed shortly after the first time I set it up
for crossband repeat. I don't know what went wrong, but the radio
was completely dead. Fortunately it was still under warrantee because
the repair would have cost nearly $200 otherwise. No problems since.
I just wish it had DTMF memory (speed dialing autopatches) without
buying the $130 wireless mike... Argh!

>Duffy

My wife's HTX202 has a nice crack in the metal casting on the back of the case, from when she dropped it a couple years back... It has done daily duty in two different cars that's she's owned through New England summers and winters (95 to -5F).

No complaints here, it still hears better than my Icom HT in heavy RF environments, still puts out something like 9W when hooked up to a heavy duty 13V source. My only gripes have been the junky plastic speaker-mic and slightly low audio deviation... not low enough to bother fixing it.

(No attachment to RatShack whatsoever. I'm just recognizing a good value. Why pay $100 more for intermod?)

>spectrum analysers.

Yes, I have one. It did cost nearly much as a second hand HP141 setup,
but at least you can lift it.
Basically - It works very well, but the lack of any sort of output means
that you can't record readings.

Even in the UK it took months to get one delivered.

>like to be treated!

You're missing the point, I'd say. I have said "No thanks". I've often
been met with "C'mon, it just takes a second" and "we need it for our
records", etc.

While I believe all people should treat others with respect, I tend
also to believe that sales people should go out of their way to
avoid any kind of disrespectful behavior of customers. If I say
"no thank you" and that doesn't end the subject, the salesperson
is out of line. End of story.

On the Amateur Radio Reference (http://www.panix.com/clay/ham.html),
there are several links to Windows-based contest/logging programs in
the "Stores and Supplies" section. If you find any not listed, let me
know and I'll add them.

Bob, et.al,

I found the Extra to be easier than the Advanced - except for the code {Oh Well}. Anyway, I disagree on the "Very Heavy in Theory and Practice" statement. I feel that at this level, the class of license should be *primarily* rules and authorizations for the "Administration" of Amateur Radio Stuff - VE, Observer, etc. That is what it appears to be now, for the most part, and I like it that way.

Resfectfully,
Walt

>like your remarks and any short cuts..thanks..Jeff

Well, Jeff,
I think that this perception is pretty accurate. The Advanced has more concepts, and you could get a big slice of any one of them. The result is, if you are weak on vector conversion, you will get six of those on your advanced ;-(

The Extra has alot of VE related questions, and I think it has fewer concepts in the question pool. It seems to be biased towards antennas and trnasmission lines. Use one of the freeware test generators to check your mastery of the material, and get more than one study guide. The ARRL and W5YI are worlds apart in their presentation of the question pools.

Absolutely nothing !!! I should have ignored the original post, but I
let my personal feelings on the matter get out of hand. You are correct
in 'assuming' that we should ALL ignore those types of posts and not
react to them (just like when you have someone annoying on a repeater,
if you ignore them long enough, they will eventually go away).

My apologies to this news group.

NEW AWARD AVAILABLE / SPECIAL EVENT OPERATIONS

On 12 Dec 1901, Marconi bridged the Atlantic by receiving the first transatlantic radio message on Signal Hill in St. John's, Newfoundland. To celebrate the 100th year of radio, a special QSL will be made available to any amateur or SWL who works/hears VO1AA on 12 Dec. this year. Please listen around 14.030, 7.030 (CW) and 14.300 (SSB)
An award is being established for anyone who works/hears VO1AA on 5 or more anniversaries of 12 Dec. from this year to the 100th aniversary in 2001. Further announcements will be made at a later date.
VO1AA and the awards are sponsored by the Society of Newfoundland Radio Amateurs. VO1AA also operates under the callsign VO1IMD on international Marconi Day each year.

I agree. The Extra was easier, plus fewer questions. Have no idea wy,
probably a flaw in the exam system (and I am a VE!)
Perhaps also the fac you have to pass 20 WPM code to get the full license
has something to do sit, but I doubt it.
Interesting question

1461. IPS Daily Report - 01 November 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-01 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <478v4v$jem@flare.syd.ips.oz.au>
Source record: 236158
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 NOVEMBER AND FORECAST FOR 02 NOVEMBER - 04 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

GOES satellite data for 31 Oct
Daily Proton Fluence >1 MeV: 1.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.0E+06 (normal)
X-ray background: A1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 Nov 03 Nov 04 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 Nov: 074/011

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 31 Oct
Learmonth 14 3333 4232
Fredericksburg 21 16
Planetary 15 13

Observed Kp for 31 Oct: 4332 2323
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Nov 20 Active
03 Nov 20 Active
04 Nov 15 Unsettled
COMMENT: IPS Geomagnetic Warning 27 was issued on 27 October and is
current for interval 31 October to 5 November. Geomagnetic activity
appears to be milder this rotation.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Nov normal normal-fair fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Nov normal fair poor
03 Nov normal fair poor
04 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
01 Nov 6

Observed Australian Regional MUFs:
Darwin MUFs were depressed 15% during local night hours, near
predicted monthly values during local day. Townsville MUFs were
depressed 15% during local night and enhanced 15% during local day.
Sydney and Hobart MUFs were depressed 10-30% at times during local
day yesterday.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 Nov 0 Near predicted monthly values for northern Australian
region. 15% depressions expected for southern
Australian region.
03 Nov 0 Near predicted monthly values for northern Australian
region. 15% depressions expected for southern
Australian region.
04 Nov 5 Near predicted monthly values

COMMENT: IPS HF Communications Warning 27 was issued on 27 October
and is current for interval 31 October to 3 November. Strong spoardic
E blanketing observed 00UT, 10-12UT at Sydney.

1464. Police radar, was he lying?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-01 00:00:00 UTC
From: curryds@craft.camp.clarkson.edu
Message-ID: <478g1o$ipd@library.erc.clarkson.edu>
Source record: 236161

I recently recieved a speeding ticket in the state of New York. I was the
only one on the road at the time and when he drove past going the opposite
direction, my radar detector alerted and shortly after I was pulled over.
He said that I was going much faster than i actually was because as soon
as the detector went off i checked my speed. When i asked to see the inform
ation on his radar equipment he said that there is nothing to see. He
has to "estimate" the speed of my car and then activate his radar equipment
which only displays a speed figure as long as i am in his "window". After
that, the speed disappears. Now, don't these devices simply transmit a
microwave signal and time the return? If so, wouldnt the signal bounce
off trees and rocks and other such hard surfaces on the other side of the
road? Would these indicate a speed on his display? Is there a "hold" switch
on his display? Anyone knowing anything about the police radar that the
New York State troopers use please respond here or by email. I drive a sports
car and think that these people simply add 5 or 10 miles to the speed and then
cant show you the results. Boy, that sure makes it hard to respect them.

I thought the extra was easier. The advanced is mostly theory and formulas. The
extra was mostly rules and regs for giving exams. I also thought the advanced
was more fun.

>CQ is only for HF. Please help. Thanks a lot....
-snip-

Here in the Seattle area, I've never heard anyone call CQ on a repeater. I do hear people say "is anyone around? W7XXX listening" or something like that. Often I will hear "W7XXX monitoring", but I never know if that is really a call for anyone to answer like a CQ is, or if they are just announcing that they are now on frequency so a specific station can call them.

Personally I'd like to hear more CQing on repeaters, but I'm not one to buck the local traditions... :-) I do operate 146.52 simplex a lot, and I DO call CQ there and get a surprising number of responses, even mobile.

Well, I suppose there are some people so dumb that they only look at the question pool. But that's surely the hard way to pass the tests. It's lots easier to read a book covering the theory and then you can simply derive the answer to any test question that may come along. The idea of memorizing the question pool seems like a ghastly amount of wasted effort to me. And you're right, if that's all you've done, you will have horrible gaps in your knowledge. Still, most people surely don't memorize the question pool as someone might a string of nonsense syllables. Surely they think about the question and answer just a bit, if for no other reason than to reduce the tedium. If they do, they're bound to accquire *some* knowledge.

Source record: 236087

>I have what I hope is a simple request...;-) I have this 6m SSB radio here
>and I have had little luck making contacts on SSB other than a local net.

Welcome,

It sounds like you tried only in the past few weeks. This time of the year
openings are very rare and can pass unnoticed. Try again in the sporadic -E
season between April and August, with best chances around June. You may
find the band extremely busy.

>The fact that I can communicate with the net tells me I am at least
>functional...

Just a word of warning, be sure that 1) your output power is OK
and 2) that you are not getting much better reports than you can give.
I had a 20 dB rx signal loss in a transverter and it still took a while
until I realized that something was wrong.

>a) 50.125 MHz

And if you are in a good location and have a decent antenna try 50.110
for europena stations (Portugal, Spain).

>I realize 6m is not as well populated; all I want to do is improve my odds!

Most of all, get a beacon list. (there is one on the web, I do not have the
URL right now, it is in Finland) If you scan beacons, you may detect an
opening very early.

Mark,
There are many books (probably available at the local library)
which offer what you need. The ARRL publishes several that list
all characters, numbers and punctuation. It is so easily
obtained that to ask someone to create and E-mail the information
to you is a bit much.

Mike,
"Up there in Canada" do blacks refer to each other as "Nigger" as often as they do here in the U.S.? Let's see; we have "Negro" (derived from Latin), "African-American" (alluding that all from Africa are dark-skinned), "Afro-American," "people of color," "black" and, another common name used here by Negroes or blacks or Afro-American or whatever: "mother-fucker." I know a guy (fair-skined, person of no color, etc.) who drove a bus in Southeast Washington, D.C. He told me he began to feel "m__-f__" was his middle name! "Political Correctness" is no more than "feeding the alligator" and seems to involve a posture that starts with "bend over and grab your ankles....."

>
> Duffy

Statistically, when someone is satisfied with a product they tell
three people. When they are dissatisdied, they tell nine. It
has been my impression that there are a lot more ardent HTX 202
supporters verses detractors.

Rather than making blanket statements, why don't we conduct a
scientific poll. We could have all HTX 202 users on this list
mail me and report their satisfaction, on the following scale

1 = ripoff junk, never buy another
2 = dissatisfied
3 = mediocre, might buy one and might not
4 = reasonably satisfied, would condider buying another
5 = most wonderful 2 meter handheld ever conceived

Also, please list number of units owned and number of years
owned. If you have more than one rig, please feel free to
rate them individually.

curryds@craft.camp.clarkson.edu (David S. Curry KG2EB) writes:

>When i asked to see the inform
>ation on his radar equipment he said that there is nothing to see.

If he marked "RADAR" on the ticket, you have won the case! It is improper to use radar as a witness, when it's data cannot be verified. That throws out the radar part. Now you have to throw out the policeman part. Here's how: Get your lawyer to get a copy of the published procedures the police will use. If you don't have a lawyer, then get it yourself.

Note where it says that the person cited may view the radar evidence. If there is no such procedure, you've also won, because the Constitution guarantees it.

>He
>has to "estimate" the speed of my car and then activate his radar equipment
>which only displays a speed figure as long as i am in his "window". After
>that, the speed disappears.

This type of radar is illegal, and none of those manufactured in the U.S. operates this way.

> Now, don't these devices simply transmit a
>microwave signal and time the return?

No, they transmit and receive at the same time. Your car produces a shift in receive frequency proportional to your speed.

> If so, wouldnt the signal bounce
>off trees and rocks and other such hard surfaces on the other side of the
>road?

These will reflect at the same speed as the cruiser is going.

>Would these indicate a speed on his display?

No, only a speed greater than the cruiser will display. The cruiser speed is subtracted from the received Doppler shift.

>Is there a "hold" switch
>on his display?

Yes. All honest cops will gladly show you your speed. The ugly cop will bluff his way. The ugly cop also needs to be identified to the internal affairs division. Write a letter, endorse it with your lawyer, or get it notarized.

>Anyone knowing anything about the police radar that the
>New York State troopers use please respond here or by email. I drive a sports
>car and think that these people simply add 5 or 10 miles to the speed and then
>cant show you the results. Boy, that sure makes it hard to respect them.

That's your problem then. My advice to any adult, is to get a Buick. I never got a ticket in my Buick, even though I was speeding. Buicks are invisable to policemen. I used to own a 68 442 Olds, Candy Apple Red, and the result was an SR-22 filing, $2k a year insurance, and over $1k in fines, plus suspension. After three years the Judge reviewing my case congratulated me on the improvement. He asked how I did it, and I told him I bought a Buick. He said I made a wise choice, and cleared my record.

This must not be true everywhere. In Ohio many years ago, an officer would ask if you would like to view the radar display. This was all fine and dandy untill a motorist was killed getting back into her car, comming from the cruiser on a busy freeway.

Of course a huge lawsuit insued, and it was found that the police are responsible for you during a stop.

Because of this rulino, an officer in Ohio does NOT have to let you view the display on the roadway. Instead, you are allowed to view the evidence in court. As a matter of fact, my police buddies tell me they can ORDER you to stay in your vehicle, even if you DO want to get out (they site safety reasons).

Just some input from what I have heard. :)

>>> Can a computer VGA signal be transmitted via a radio signal?

Absolutely. But at what frame rate? If you mean a real-time
VGA link at 640x480 resolution, you're talking about a real high
data rate: for example, 256 colors (eight bits) times 640x480 pixels
times, say, 30 frames per second is 73.73 million bits per second.
An amusing coincidence, given the ham radio context, but not an amusing
prospect for those who share this finite spectrum resource. Some
form of compression is clearly needed, at which point you're not
transmitting a VGA signal but rather an encoded image for reconstruction
and redisplay at the other end.

Does this help at all?

Was that written about some 18th Century radar evidence, or was the
guarantee added in some amendment that I slept through? One has a right
to confront one's accuser, but the accuser is the cop and not the gizmo.

Every time I've received a ticket, the speed written always seemed far
less than the speed that I thought I was actually doing at the time.

YSTMV (your speeding tickets may very)

1495. GB2RS News 5th November 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <815366032snx@llondel.demon.co.uk>
Source record: 236105
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 5th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The CQ World Wide DX SSB Contest took place last weekend and contesters were treated to some very good HF propagation conditions with over 120 countries being worked from the UK on both 15 and 20 metres. Even on 10 metres, over 80 countries were spotted on the UK DX Packet Cluster, while at the other end of the spectrum about 60 countries were available from the UK on 160 metres.

The November Radio Communication magazine has been posted to all RSGB members. It includes the RSGB Annual Report and an envelope for the Council election. A ballot form, details of the forthcoming AGM and a Proxy voting form are incorporated in the Annual Report. Any member who has not received the Annual Report or the envelope should contact RSGB HQ for a replacement.

RSGB Headquarters in Potters Bar will be open on Saturday, the 18th of November, between 10.00 am and 4.00 pm. The bookshop, museum, library and GB3RS shack will be available to visitors. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

A new beacon operating in the 24GHz band is expected to commence operation on Friday the 10th of November. Isle of Wight beacon GB3IOW has been built and tested and was scheduled for installation on the mast about now. The frequency of operation is 24,025.000 MHz.

A 'Club of Friendship' day on the air takes place today, the 5th of November, from 0001 to 2359UTC, to help forge links between British and Russian radio amateurs. During that time, the club stations G4BAS, or GX4BAS/P, and RK3AWP will be operating. An award will be available to those who make or hear 10 contacts with amateurs in Russia. Further details can be obtained from Howard Ketley, 1 Tewkesbury Avenue, Mansfield Woodhouse, Notts NG19 8LA.

The Martlesham Radio Society's Microwave Round Table will be held at the BT Laboratories, near Ipswich in Suffolk, next Sunday, the 12th of November. For BT Labs' security reasons, all access is by ticket only, so if you would like to attend please write straight away to Roy Smith, G0RRC, listing the names of all persons attending. All requests must be received by Roy by this Wednesday, the 8th of November, at the latest. Please enclose a self-addressed, stamped envelope. Roy's address is

correct in the 1995 and 96 editions of the RSGB Call Book.

The British Amateur Radio Teledata Group's AGM takes place next Saturday, the 11th of November, at the Strathmore Hotel, Luton. The BARTG AGM is open to all paid-up members of the Group. Details may be obtained from Peter Adams, G6LZB, on 01923 220774.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

The Heard Island DXpedition has been postponed until at least early next year. According to a message on the Internet posted by Bob, KK6EK, who was in Perth, Western Australia, the vessel that was to have taken the group to Heard Island did not meet their safety standards for the journey, and they were therefore looking for an alternative vessel.

From Rotuma, 3D2OQ is on the air from now until Tuesday the 7th of November.

And from Tajikistan, K4YT and DL4FDU will be active as EY8/K4YT and EY8/NP2AQ from Monday the 6th of November for one week. Activity will be on all bands from 10 to 80 metres on SSB and CW.

Now news of some special event stations:

The station GB8CC is operating on all bands until the 16th of November, running in conjunction with celebrations in Cleveland around the birth date of Captain James Cook.

Today is the final day of operation for OS4CLM, a special event station in Belgium commemorating the Canadian Liberation March which took place in 1944 to liberate the town of Knokke.

Next the Rally News:

The North Wales Radio and Computer Rally is taking place at the Aberconwy Conference Centre in Llandudno this weekend, the 4th and 5th of November. The event includes an RSGB book and information stand.

The North Devon Radio Rally is being held at Holsworthy Memorial Hall today, Sunday the 5th, from 10.00am until 4.00pm.

The Donegal Amateur Radio Society is holding their annual mobile rally and junk sale at Jackson's Hotel, Ballybofey, in County Donegal today, Sunday the 5th of November.

A computer and electronics show, which will feature amateur radio, will take place on Saturday the 11th of November at the Bingley Hall, Staffordshire Showground, near Stafford. A concessionary entrance fee is available to RSGB members, so take your membership card along. For further details ring 01473 272002.

The Great Northern Hamfest takes place at the Metrodome Leisure Complex in Barnsley town centre next Sunday, the 12th of November. The event features trade stands, electronic components and kits, clubs, repeater

groups, Novice and special interest groups and a large bring and buy stall. Morse tests will be available on demand between 12 noon and 3.00pm: please take two passport-size photographs and the appropriate fee if you wish to take your Morse test at the Hamfest. Talk-in is on 2 metres, channel S22. The contact number given for this event in November's RadCom is incorrect. It should read: 0836 748958. Apologies to those concerned.

Also on Sunday the 12th, the Coulsdon ATS Radio and Electronics Bazaar will take place at the HQ4 Purley Scout Group, Liongreen Road in Coulsdon. Doors open at 10.00am. For further details ring 0181 684 0610.

The Mars - Stockland Radio and Computer Rally takes place at Stockland Green Leisure Centre, Slade Road, Erdington, Birmingham on the 12th of November. Doors open at 10.00am and further details may be obtained from Norman, G8BHE, on 0121 422 9787.

On Saturday the 18th of November, the Carrickfergus Amateur Radio Group Rally will take place at Downshaw School in Carrickfergus. Doors open at 12 noon and further details may be obtained from GI0JPR on 01960 361627.

The Rochdale and District Amateur Radio Society Traditional Radio Rally takes place at St Aiden's Vicarage, Sudden, near Rochdale on Saturday the 18th. The event features a bring and buy stand, components and "loads of junk"! Doors open at 11.00am and talk-in is on 2 metres channel S22. For details contact John, G7OAI, on 01706 376204.

And a further reminder that RSGB headquarters in Potters Bar will also be open on Saturday the 18th.

Now for the HF contest news:

The Ukrainian DX contest is taking place this weekend, the 4th and 5th of November, from 1200UTC Saturday until 1200UTC Sunday. Operation is on CW and SSB on 80 to 10 metres and the rules are on page 20 of November's RadCom.

The RSGB Club Calls Contest takes place next Saturday the 11th of November between 2000 and 2300 UTC. The rules for this event are the same as those for next year, which were published in Contesting Guide supplement in September's RadCom.

And next weekend, the 11th and 12th, the Czech and Slovak OK and OM DX Contest takes place on CW and SSB. Brief rules were published on page 20 of the November RadCom.

Next some VHF contest news:

The 144MHz CW Marconi Contest and RSGB 24-hour contest is taking place this weekend, the 4th and 5th of November, finishing at 1400 UTC on Sunday. The rules are in the July RadCom. The RSGB 6-hour 144MHz CW contest also takes place during the weekend, and the rules for that event are in the June RadCom.

On Friday the 10th of November, the third session in the 432MHz Cumulative contest will take place. The rules are in the June RadCom. Please note that this contest takes place between 1930 and 2200 local time as printed in the rules, and not at the times stated in the Contest Exchange column in the November RadCom.

And now the solar factual data:

The period from the 23rd to the 29th of October saw solar activity at very low levels and the geomagnetic field decline from sub-storm levels. Sunspot numbers declined from 35 on the 23rd to 5 by the 29th, with a mean of 20. Solar flux levels declined from 77 units on the 23rd to remain at 74 units from the 24th to the 28th, and then decline again to 73 units on the 29th. The average for the period was 74 units. Only a few small and insignificant sub flares took place during the period. The electron fluence declined slightly but remained at moderate levels. X-Ray flux levels declined from A6.4 units on the 23rd to A1.0 units by the 29th, with an average of A2.6 units. The 90-day solar flux average on the 29th was 75 units, one unit up on last week. Geomagnetic activity declined from unsettled levels, with an Ap index of 19 units on the 23rd, to quiet levels, and was down to Ap 3 units on the 28th. The average was Ap 8 units. The aa indices, as supplied by the British Geological Survey for the period from the 17th to the 23rd, saw conditions increase from unsettled levels on the 17th to sub-storm levels from the 18th to the 20th, with 55 nanoTeslas recorded on the 20th. Conditions then declined to active levels, with an average of 34.8 nanoTeslas, which is K3. Bartel's rotation number 2216 starts today, the 5th of November.

I'll repeat the figures: spots - 20, flux - 74, Ap index - 8, X-Ray flux - A2.6.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 20th to the 26th of October, saw levels increase from 6.8MHz on the 20th to 7.7MHz the following day. Levels declined to 6.1MHz by the 23rd, but then improved up to the 26th. The average was 7.0MHz. Darkness hour lows increased from 1.7MHz on the 20th to 2.5MHz by the 26th, with an average of 2.3MHz. The daytime highs took place between 1100 and 1500 hours every day, with the darkness hour lows between midnight and 0500 hours, except on the 26th, when the low took place at 2000 hours.

I'll repeat the figures: highs - 7.0 MHz, lows - 2.3 MHz.

And lastly the solar forecast.

This week solar activity could increase to moderate levels with the more active side of the sun rotating into view. Solar flux levels are expected to increase from the mid 70s to the high 80s. From midweek onwards solar flares could take place. Geomagnetic activity is expected to be at unsettled levels for most of the week due to a recurring coronal hole. Activity may show signs of declining to quiet levels by

next weekend. Ionospheric MUFs for the south during daylight hours are expected to be about 20MHz, but may increase later in the week. The darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Oscar and G7 Victor Whisky series, and Novice calls in the 2 0 Alfa Mike and 2 1 Echo Oscar series.

This is to inform you that my latest version of QSL Managers
software and data list is available

Cost is US $ 10.00 or 20 IRCs

It has over 50,000 calls and requires some 20MB of HD memory.

>Tnx,

>Joe

The balloon flights which I have worked use a GPS system which can be
off by that much in any direction. To get accuracy with a non-military
GPS, you have to get repeated readings without moving the GPS.
If you have a fixed platform, no problem. If you use the GPS in an
airborne device (airplane, balloon) lots of luck.
A friend who uses GPS daily demonstrated to me how to use a $300 unit.
Accuracy meant leaving the GPS stationary for at least half an hour, and
let it or your software process a weighted average of the readings.

i know that the old MPH k55 (X-band) units have a hold function!

ps I tried that once, the officer said "If I let you see it, I'll have
to give you a ticket" I don't think he had "it" but i didn't risk
getting a ticket by pushing him - I took the warning.

Steve Sampson (ssampson@icon.net) wrote:
: That's your problem then. My advice to any adult, is to get a Buick. I never
: got a ticket in my Buick, even though I was speeding. Buicks are invisable
: to policemen. I used to own a 68 442 Olds, Candy Apple Red, and the result
: was an SR-22 filing, $2k a year insurance, and over $1k in fines, plus
: suspension. After three years the Judge reviewing my case congratulated
: me on the improvement. He asked how I did it, and I told him I bought a
: Buick. He said I made a wise choice, and cleared my record.

I drive a Buick, too. On two occasions I have passed police cars
on the side of the road while traveling well above the speed limit
and the police cars turned on their lights and started moving and
then shut the lights off and stopped again. One of the occasions,
the officer might have not have got a good return and decided not
to pursue it (I had just passed a bunch of cars), but the other
time the previous car was at least a quarter mile ahead and the
next car was at least a quarter mile behind (it was about 3 am).
Another time, I was talking to a deputy sheriff about something else.
He looked at my car and asked if that was me that had driven past a
few minutes earlier at twice the speed limit. I said yes and he
just suggested that I hold it down. This was in a park where the
speed limit was 15 mph.

>radios is way above the norm.
>

Keep in mind that with 7000+ stores selling these, there are far more
units out there than any one model of Kenwood, Icom or Yaesu---
maybe than all of them combined. The percentage of problem radios
may be well above norm if you are looking at sheer numbers, but I'll
bet that the ratio of problem radios to number of units sold are far lower
than most of the other brands/models. You can put down the Radio
Shack HTs all day long but the thing most of you belly-achers are
forgetting is that the Radio Shack HTs cost far less than the others

and are a bargain, especially if you got it used or on sale. The amount of performance/dollar is greater than others!

: : The HTX-202 and 404 maybe has less sensitivity than these radios, but
: the sensitivity is more than enough. The problem in the Yaesus, Kenwoo

: : Steve, WA3RVT

: The HTX 202 isn't as dead as you think
: I took mine over to a friend's commercial lab where they do tests
: like that and we tested the HTX 202 along with an Icom and a Yaesu.
: All three were about .16 - .18 uV in the 2 meter band.
: (Yaesu FT 416, and two Icom u2at's were the other ht's tested).

: 73 Shel WA2UBK
:
I don't think it matters: They're obviosly sensitive enough. The reason I
sold my Kenwood was the intermod. I go to school downtown, and I got sick
of not being able to use my HT without hearing pagers. I have absolutely
NO intermod problems with my HTX-202. Also, for an extra $40, i now have
it warrantied for 5 years, which sure beats the 1 year limited warranty
that I had on the last two HT's. (And YES, the warranty is transferrable..)
I like the Idea that I can have an HT for 5 years, and not have to go to
AES way out on Good Hope RD. if it has a problem.

Works Great on packet, too...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 NOVEMBER AND FORECAST FOR 03 NOVEMBER - 05 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/010

GOES satellite data for 01 Nov
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Nov 04 Nov 05 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Nov: 073/010

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 01 Nov
Learmonth 17 3334 4422
Fredericksburg 21 22
Planetary 15 23

Observed Kp for 01 Nov: 4453 4233
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Nov 20 Unsettled to active
04 Nov 15 Unsettled to active
05 Nov 13 Unsettled
COMMENT: IPS Geomagnetic Warning 27 was issued on 27 October and is
current for interval 31 October to 5 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
02 Nov normal fair fair-poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Nov normal fair poor
04 Nov normal normal fair
05 Nov normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
02 Nov -3

Observed Australian Regional MUFs:
Darwin MUFs were near predicted monthly values. Townsville MUFs were depressed 15% during local daylight hours. Sydney and Hobart MUFs were depressed 10-30%.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
03 Nov -5 Near predicted monthly values for northern Australian region. 15% depressions expected for southern Australian region.
04 Nov 0 Near predicted monthly values For northern Australian region. 15% depressions expected for southern Australian region.
05 Nov 0 Near predicted monthly values

COMMENT: IPS HF Communications Warning 27 was issued on 27 October and is current for interval 31 October to 3 November. Strong sporadic E blanketing observed near dawn at Sydney and Hobart. HF conditions for southern regional Australia are currently degraded due to geomagnetic activity.

13.3. Xearth

Author
Kirk Lauritz Johnson, tuna@cag.lcs.mit.edu, modified by Dimitris
Evmorfopoulos, devmorfo@cs.mtu.edu.

Description
A rotating earth for X-windows root window. It has real life
shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
released, stable.

System requirements.
X-Windows.

Detail
xearth is much like sunclock except that it draws a view of the
earth onto your root map in blue and green, as the earth would
be viewed from space. You have a number of options in
determining the behaviour of the view. You can either have it so
that the same part of the earth is displayed, and the sun
rotates, so you'll have varying light and shadow on the display,
or you can have it shown as if you were travelling with the sun,
so the whole of the globe is visible, and the earth rotates.
You can specify the latitude/longtitude that will be the centre
of the display. xearth is also capable of producing gif and ppm
```

graphics output, so you can generate custom graphics of the globe. When run as your root map, you can adjust the interval of time between updates. On my 486sx25 you notice a small degradation in performance when it is recalculating, but it's not annoying.

Where and How to obtain it.
A precompiled xearth binary is available from: sunsite.unc.edu, or the source can be obtained from just about any X11/contrib directory. Try export.lcs.mit.edu if you can't find it elsewhere.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The copyright notice included states that xearth is freely redistributable so long as the copyright notice is left intact, and be included in documentation.

Contributed by:
Alan Cox, GW4PTS.

14. Installation, Configuration, Hints and Tricks.

This section provides some detail on how to actually install and use some of the listed software. It will also detail some solutions to some tricky problems that you might encounter with the software.

14.1. AX.25 - Packet Radio protocol kernel software.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as tcp/ip and netrom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

Alan Cox has developed some kernel based AX.25 software support for Linux and these are available in ALPHA form for you to try. Alan's code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card and the Z8530 SCC driver.

The User programs contain a P.M.S. (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol.

Be sure to read /usr/local/ax25/README as it contains more complete information regarding this software.

14.1.1. Where to obtain the AX.25 software.

The AX.25 software is comprised of two component, the kernel source and the utility programs. As of the version 1.3.* release of Linux kernel source the AX.25, Netrom, Z8530 SCC and PI card drivers are all

included as a standard. I strongly recommend you obtain and use the version 1.3.* kernel source. Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter.

You can obtain the latest kernel source from:

ftp.funet.fi

/pub/OS/Linux/PEOPLE/Linus/v1.3/

You will also need the utility programs. The latest version of those can be found at:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-030.tar.gz
.../ax25-utils-030-patch1.gz

14.1.2. Installing the AX.25 software.

The software comes in two parts, the kernel source, and the user programs.

14.1.2.1. The kernel source.

If you are using the 1.3.* kernel source then all you have to do is build the kernel as you would normally.

The following should be safe:

```
# cd /usr/src/linux
# make config
# make dep;make
```

Be sure to answer `yes' when you are asked if you should include the AX.25 support in the make config step. You will also need to answer `y' to including SLIP if you want the AX.25 code to support a KISS TNC or if you intend running a version of NOS on your system so you can link the two. You will be asked if you wish to include the Z8530 driver. If you wish to support the Ottawa PI driver then you must answer `y' when asked: Do you want to be offered ALPHA test drivers ? and: Other ISA cards ? then `y' when prompted: Ottawa PI and PI/2 support.

14.1.2.2. The user programs.

To install the user programs you should try:

```
# cd /usr/local
# gzip -dc ax25-utils-030.tar.gz | tar xvvof -
# gzip -dc ax25-utils-030-patch1.gz | patch -p0
# cd ax25
```

You should then read the README file and follow its instructions. When you are happy you are ready to compile, then do:

```
# cd /usr/local/ax25/src
# make clean
# make install
```

14.1.3. Configuring and using the AX.25 software.

Configuring an AX.25 port is very similar to configuring a slip device. The AX.25 software has been designed to work with a TNC in kiss mode or an Ottawa PI2 card. You will need to have the TNC preconfigured and connected to your serial port. You can use a comms program like minicom or seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the slattach program. For example:

```
# /usr/local/ax25/bin/axattach -s 4800 /dev/cua1 VK2KTJ &
```

would configure your /dev/cua1 serial device to be a kiss interface at 4800 bps, with the hardware address VK2KTJ.

You would then use the ifconfig program to configure the ip address and netmask as for an ethernet device:

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 257 up
```

To test it out, try the following:

```
/usr/local/ax25/bin/call VK2DAY via VK2RVT
```

The call program is a linemode terminal program for making ax.25 calls. It recognises lines that start with ` ' as command lines. The ` .' command will close the connection.

You also need to configure some items such as the window to use. This necessitates editing only one file. Edit the /usr/local/ax25/etc/ports file. This is an ascii file containing one line for each AX.25 port. You must have the entries in this file in the same order as you configure your AX.25 interfaces.

The format is as follows:

```
callsign baudrate window frequency
```

At this stage not much of this information is used, it will be picked up and used in later developments.

Please refer to the man pages in /usr/local/ax25/man and the README file in /usr/local/ax25 for more information.

14.2. Ottawa PI/PI2 card driver.

The Ottawa PI card is a Z8530 SCC based card for IBM PC type machines that is in common usage by Amateur Radio operators worldwide. While it

is most commonly used by Amateur Radio Operators, it could be pressed into service in other fields where it is desirable to have the features of a Z8530. It supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem, and improved hardware design.

A driver for this card has been written by David Perry, <dp@hydra.carleton.edu>, and is available from in the standard linux kernel. Please refer to the AX.25 section for configuration details.

14.3. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users. Brandon S. Allbery, KF8NH, contributed information to explain how to achieve this.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this would be slow and costly. Linux provides a feature that many other unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must chosoe a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

15. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible. So I'm keen to hear about any developments or products that I don't already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing? Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

terryd@extro.ucc.su.oz.au or terry@orac.dn.itg.telecom.com.au

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

16. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on niksula.hut.fi. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and I believe there is an `IRC' channel that sometimes is used to discuss them as well.

To join the Linux HAMS channel on the mail list server, send mail to:

linux-activists@niksula.hut.fi

with the line:

X-Mn-Admin: join HAMS

at the top of the message body (not the subject line).

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion
of the use of advanced protocols, of which tcp/ip is one, in Amateur
Radio. Linux specific questions should not ordinarily go there.

1517. 6m calling?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: jds@neptune.net
Message-ID: <479lpv$par@neptune.neptune.net>
Source record: 236127

I have what I hope is a simple request...;-) I have this 6m SSB radio here and I have had little luck making contacts on SSB other than a local net.

The fact that I can communicate with the net tells me I am at least functional...

I am fairly new still to 6m. In my travels, I have noted several different "calling frequencies" for 6m SSB. What I'd like to know is, what frequency do real, honest to goodness 6m SSB operators monitor as a calling frequency?

a) 50.125 MHz
b) 50.150 MHz
c) 50.200 MHz
d) something else?

I realize 6m is not as well populated; all I want to do is improve my odds!

Cast your votes and I'll tally and report back!-) and thanks!

To all radio amateurs

SB DX ARL ARLD056
ARLD056 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

HEARD ISLAND, VK0. The DXpedition group has encountered transportation difficulties and has rescheduled the trip for early 1996.

BANGLADESH, S2. JA2NQG, is planning to be active from Dacca January 5 to 12 as S21ZZ. Activity will be mainly 160 meters.

SEYCHELLES, S7. The trip by Gerard, F2JD, is delayed until November 10. Plans are to stay there 4 weeks before moving to Madagascar.

MELLISH REEF, VK9M. Steve, AA6LF, continues his around the world sailing trip. He plans to be active for 4 days from Mellish Reef as VK4ALF/9 starting October 28. Starting November 5 he will use the same call sign from Frederick Reef, part of the Coral Seas Island Group, and a new IOTA number. This will be a two day stay. QSL via AA6BB.

CHAD, TT8. TT8BP has been showing up on dx nets. Check 14270 kHz around 2200z and 14247 around 2100. QSL via IK5ANP.

OMAN, A4. From November 1 to December 31, all A4 stations will be using their call signs followed by /25 to commemorate the 25th Anniversary of National Day.

PACIFIC DXPEDITION. Nao, JE7RJZ, will sign KC6JZ from Palau November 15 to 17. After that he will be QRV from Guam as WH2M until November 19. Nao will concentrate on satellites OSCAR 10 and 13, and HF CW. QSL via JA7FWR.

EAST KIRIBATI, T32. Paul, WC5P, will be active as T32BE from Christmas Island November 14 to 28. He will operate CW on all HF bands and plans to be in the CQWW DX CW Contest. QSL via WC5P.

CAMEROON, TJ. Listen for Darek, TJ1GD. QSL via SP9CLQ. Darek reports that newly licensed TJ1SP should be QRV soon.

ITU HEADQUARTERS, GENEVA, 4U1ITU. F5PAC and others will sign 4U1ITU November 3, 4 and 5 on all bands, CW, SSB and satellite.

PREFIX HUNTERS NOTE. Ricardo, HP2CTM, and Jose, HP2CWB, will be on from two or three islands in the Archipelago of San Blas Island Group, IOTA NA-170, November 4 and 5. Listen for the call signs 3F0T, H80T and HO0T on 40 through 10 meter CW and SSB. QSL via HP2CWB.

JAPAN, 7J1. Bill, KQ4GC, will operate as 7J1AWO during November, with an emphasis on 80 meters. QSL via CBA.

THIS WEEKEND ON THE RADIO. Page 124 of September QST details the ARRL International EME Competition. Complete rules for the ARRL November Sweepstakes CW appear on pages 125 and 126 in October QST. Rules for the HA QRP Contest are in November QST on page 132.

1520. 2M VS 70CM??

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.47007.4727.0N1FC78B@canrem.com>
Source record: 236130

Hi. I currently use a Kenwood TM241A, with a 5/8 magnet mount on the car, and a very small 2m beem on the house, about 35 feet off the ground. I am fed up! I am mainly tired of overcrowding, and incredible amounts of intermod almost everywhere!
How much is 440 MHZ used these days? When I had a scanner years ago, I thought it was quite dead compared to 2m, but things may have changed. Also, assuming all variables are the same (ie. putting out 45-50 watts to 5/8 antenna), what are the performance differences between the two bands? I may escape the intermod by switching to 440, and be able to have higher gain but smaller antennas then those on 2m, but do the bands perform radically different from each other?

Anybody with any thoughts on this matter?

Thanks,
Chris.

1522. Radio Amateur Callbook

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: clinton.peebles@saloon.bcbbs.net
Message-ID: <95110220120414085@saloon.bcbbs.net>
Source record: 236132

Did anyone else get a flyer in the mail from Radio Amateur Callbook for callbook CD's? They have a CD coming out this month with the 1996 International callbook for $49.95. I was going to order it until I read "Please add sales tax in CA,DC.IL,MA,NJ,NY,OH,PA,TN,VA and Canada" These guys are located in New Jersey U.S.A., and they want Canadian sales tax in U.S. funds!! I have no problem paying GST, but not to the states in U.S. funds.

Linux HAM-HOWTO, Amateur Radio Software List
Terry Dawson, VK2KTJ, terryd@extro.ucc.su.oz.au
v1.8, 9 July 1995

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field. This document also
provides some detailed information on how to configure and install
some of the more important pieces of software.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but Matt Welsh
suggested that there was no reason why it shouldn't be distributed
with the Linux Documentation Project documents, so it has been renamed
the HAM-HOWTO and will be made available with the rest of the Linux
Documentation. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
Added Brian Lantz's TNOS.
Added Philip VanBaren's audio spectrum analyser.
```

Added Emarit Ranu's FT-890 controller program.

Corrections:
Updated Packet Cluster information.
Updated AX.25 kernel software.
Updated AX.25 utilites information.
Updated howto configure PI card.
Updated rspf daemon information.

2. Where to obtain new versions of this document.

This list will be periodically posted to the comp.os.linux.announce newsgroup, and to the HAMS list on niksula.hut.fi.

It is also available from the following World Wide Web sites:

The Linux Documentation Project runs a Web Server and this list appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application
viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/microsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

Contributed by:
John Melton, G0ORX/N6LYT, Alan Cox, GW4PTS, Jonathon Naylor, G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written in 'C' language on a UNIX workstation. It provides two different live displays, for single or multiple satellites, and two different orbit prediction facilities. Cursor controls used in both live displays are compatible with the VT100 standard, which allows the program to be run basically from any terminal. An optional X Window graphics display shows the typical world map tracking chart. The orbit prediction can be run either interactively or in a batch mode. In the latter case all necessary parameters are specified on the command line. The program uses the NORAD/NASA two-line Keplerian element (TLE) sets directly.

The current version of SatTrack can track a single satellite and/or display multiple satellites for a single ground station. It also can control suitable ground station hardware, like antennas and radio equipment, and has an autotrack mode in which it switches automatically between a number of specified satellites. For calibration purposes tracking of the Sun and the Moon are also provided. Future releases will provide more options. SatTrack requires about 5 MB of disk space in the full distribution with eight different world maps (2 styles, with 4 different sizes each, to fit everyone's screen and taste) and less than 1.5 MB of memory at run time. More information can be obtained from the SatTrack WWW Home Page <http://ssl.berkeley.edu/isi_www/sattrack.html>

Compiling the software under Linux is quite straightforward. Manfred has designed the Makefile to compile the software directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack.V3.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack.V3.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack.V3.1.tar.Z> or
the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used
without special permission for non-profit, non-commercial use.
For commercial applications a license from the author is
required.

Contributed by:
Manfred Bester, DL5KR

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt
equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com
port to use. Once started the program is menu driven. Future
versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

o You may not charge ANYONE for the program itself.

o You may not distribute modified versions of the program.

o If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. Kernel Based AX.25 networking.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk and Jonathon Naylor, G4KLX, jsn@cs.nott.ac.uk

Description
Software that allows the Linux Kernel to perform AX.25 networking.

Status
ALPHA. Still under development. In a working state.

System requirements
Linux kernel 1.3.0 or later.

Detail
Alan's software provides the programmer with a berkeley socket based interface to the AX.25 protocol. AX.25 sockets can opened for either connected, or connectionless modes of operation. Support to allow tcp/ip over AX.25 is provided. The user applications have been written by Jonathon Naylor G4KLX. Jonathon has recently added NetRom support and provided fixes and other enhancements to the code. The software comes in two parts, a kernel patch, and the user programs. The user programs included are:

axassociate
to associate a particular AX.25 callsign with a userid on your system.

axattach
to convert a serial device into a KISS device.

axl
an AX.25 listener designed to start a PMS when it receives an incoming connection. The PMS is still very new.

axsetcall
to change the callsign of a port.

beacon
generated beacon messages every 30 minutes.

call
A linemode AX.25 connection program. Call allows you to make connections to other AX.25 nodes. It provides file transmit and receive capabilities, and newer versions allow YAPP binary file transfers.

listen
a packet trace tool for radio links.

mheard
a program to display callsign heard on radio ports.

netromd
a daemon program to generate netrom routing broadcasts.

noderest
a program to restore netrom routing information from a file.

nodesave
a program to save netrom routing informtion to a file.

nrparms
a program to configure a netrom interface.

rip98d
an implementation of the rip98 routing protocol.

Where and How to obtain it.
There are a number of different versions of the software. You must choose the one that suits your version of Linux kernel. Software for kernel versions older than 1.3.* is available from:
sunacm.swan.ac.uk
<ftp://sunacm.swan.ac.uk/pub/misc/Linux/Radio/>

More detail on where and how to obtain the software is provided in the AX.25 section of the `Installation, Configuration, Hints and Tricks' chapter below.

Licensing/Copyright
Most of the software is covered by the GNU Public License, some of the software is Copyright by the Regents of University California Berkeley.

5.2. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
The current version is ALPHA.4. Brandon is still tracking down bugs, as well as evolving new features.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback) and slattach (kernels pre-1.1.13 or post-1.1.20 required for this).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself. Brandon has supplied the following list of known bugs:

o some servers seem to be causing unexplained exits.

o PPP is reported not to work in ALPHA.4, although it worked in ALPHA.3.

o BBS forwarding when convers is compiled in but not configured causes core dumps.

o the finger server is getting bad filenames.

o the bbs W command is case-munging filenames.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/j109lxA4.tgz> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.3. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is avialable for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 1.14 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/current/linux/>.

Where and how to obtain it
The current version of TNOS is always available from: www.lantz.com <http://www.lantz.com/tnos/current/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/tnos/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.4. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set

to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.
Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in March 1995.

System Requirements
Linux Kernel version 1.1.50 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of PacketCluster nodes with some experience on both PacketCluster and Linux will find this application interesting.

Here are some of the features of CLX:

o It is fully compatible with the internal PCxx protocol and from a users' point of view. It allows multitasking and different priorities for different things.

o The software detects looping DX spots without generating endless messages. clx filters out such duplicate information. We have implemented a concept which allows us to connect the network at multiple points, which would formerly have been called a "Cluster Loop". clx knows of so-called "active" and "passive" links. The outcome is that more DX information is seen by clx.

o An interface to call your external programs (even dialog programs).

o clx uses modern programming concepts like shared memory for common data, lex & yacc to implement command language, shared libraries to keep binaries small (this is still on our wish list), remote procedure calls for inter process communication. It is strictly modularized with its own dedicated process for every major task.

o Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).
clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

o The following is the only application program which can be run
on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

o A console monitor to watch ongoing activities

o Speed optimization

o An internal clx protocol

o An additional command shell for experienced users

Where and How to obtain it:
You can obtain clx from ftp.uni-erlangen.de <ftp://ftp.uni-erlangen.de/pub/public/pc-freeware/hamradio/packet/packclus/clx> or ftp.ucsd.edu <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

o 00index

o clx_105.tgz

o install.clx

o README_1.06

o upd_106.tgz

Licensing/Copyright
clx is available for non-commercial use, but the authors want to keep track of who is using their product, so before you can actually use the software you have to ask for an encrypted callsign string to be placed in the configuration file. You must send mail to <clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. TNT.

Author
Mark Wahl, DL4YBG, DL4YBG @ DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A Hostmode terminal program for TNC's that support the WA8DED hostmode protocol.

Status
Version 0.8 is reportedly stable.

System requirements
TNC supporting WA8DED hostmode protocol, serial line.

Detail
TNT is a full featured hostmode terminal program. Compiling it on Linux is as difficult as untarring the source and typing `make'. It provides both a `dumb' terminal and X11 version. It comes with some comprehensive documentation which describes its features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual screens that you can switch between. Each session window provides split screen (seperate transmit and receive text) operation with a status line. Commands can be entered in either a command session, or in any terminal session using a command key. Each of the virtual screens can be larger than the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an

ethernet and you want other terminal on the net to have use
of your radio.

Where and How to obtain it.
The software is available by anonymous ftp from: ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc08.tgz>. This site
is mirrored at a number of places so you will probably find it
at other places as well.

Licensing/Copyright
GNU Public License. Freely redistributable, no warranty.

Contributed by:
Steffen Weinreich, DL5ZBG.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA
(port to BSD), then Ron Atkinson N8FOW and John Paul Morrison
(port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an
IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have
been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet
radio you have probably been connected by an encapsulation
gateway of some descpription. Most run KA9Q's NOS and DOS, but
others run Unix and this daemon. It allows you to encapsulate IP
within IP, so that you can 'tunnel' IP connections over the
Internet. The software allows you to connect a KISS TNC to your
linux machine and to have all datagrams received on it carried
across the Internet to a similar gateway. Bdale has installation
instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp
site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code

and like it you might send him a QSL card or a postcard.
Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.

Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table

style conversation. It is compatible with the NOS convers servers, but provides extra facilities such as saving/restoring of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very stable.
System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available in the sunsite.unc.edu ham apps directory <ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers-941122.tar.gz>. The home of the software is at insu1.etec.uni-karlsruhe.de ftp server <ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated), but some portions appear to be free for non-commercial use and copying provided the copyright notices stay intact.

5.12. AX.25 digipeater for Linux

Name
axdigi

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Allows Linux to digipeat across different ax.25 ports

Status
Beta release

System requirements
Requires Alan Cox AX.25 kernel support

Detail.
Allows frames to come in one port and out another using normal ax.25 digipeater methods. Changes the digipeater callsign to the correct one for the correct return port.

Where and How to obtain it.
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/axdigi.tgz>
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/axdigi.tgz>

Licensing/Copyright etc.
GNU GPL

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.13. Gracilis PacketTwin kernel driver

Name
Gracilis PacketTwin kernel driver

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
Device driver for Gracilis PackeTwin cards.

Status
Alpha test - needs some more work before it is properly
released.

System requirements.
Gracilis PackeTwin card, Alan Cox's AX.25 kernel software.

Detail.
Provides kernel based driver support for the Gracilis PackeTwin
card using the kernel AX.25 code.

Where and How to obtain it.
Currently available only by email from the author.

Licensing/Copyright etc.
Restricted use by alpha testers only, general GPL release is
some months off.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.14. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha test - running. Current version is 0.03

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It hopefully addresses some of the quirks of RSPF v2.1, the version in NOS. It will also allow remote/local queries via a tcp session.

Where and How to obtain it.
Alpha versions are available from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/> or from the author.

Licensing/Copyright
Will be covered by the GPL when formally released.

Contributed by:
Craig Small vk2xlz <csmall@acacia.itd.uts.edu.au>

5.15. Z8530 SCC driver.

Name
generic Z8530 SCC device driver.

Author
Joerg Reuter, <DL1BKE@melaten.ihf.rwth-aachen.de>

Description
A device driver to allow you to use a range of 8530 based SCC cards under Linux.

Status
stable

System requirements.
a modern Linux kernel

Detail
The Zilog Z8530 SCC provides Synchronous/Asynchronous, HDLC, NRZI encoding and other capabilities. There are a number of peripheral cards that use the Z850 as the basis of their design. The driver is generic enough to be pushed into service for just about any sort of 8530 card. The README file that comes with the package provides detail on installation and configuration.

Where and How to obtain it:
The driver can be obtained from: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/z8530drv-1.8.dl1bke.tar.gz> for kernel versions older than 1.3.*. Kernel version 1.3.* supports the driver in the standard distribution.

Licensing/Copyright
Gnu Public License.

6. Morse Code

Software for use in conjunction with, or for facilitating Morse communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for

amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile
and install the software. I compiled it without error under
X11R6. It comes with package layouts for a range of popular
components and the example layout nicely demonstrates the
capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz>
or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-
ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro
<lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256
color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits>or ifi.uio.no
<ftp://ifi.uio.no/pub/>.

Licensing/Copyright
Modified GNU Public License, Caltch specifically disclaimed from
liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, ported by Jeff@EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer

modelled environment to see how they will behave without having to touch a soldering iron, or solder. A readme file comes with the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>

Licensing/Copyright
Copyright held by University California, Berkeley. Freely redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, drewvel@ayrton.eideti.com

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha software, but usable.

System requirements
Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit and 8-bit sample resolution on supported Linux soundcards. It's display is something akin to a high-end spectrum analyzer with falling peaks.

Where and How to obtain it:
Look for svgafft-0.2.tar.gz on sunsite.unc.edu

Licensing/Copyright
Unknown, check any README supplied.

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: umich.edu
<http://bul.eecs.umich.edu/~phillipv/signal>, sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.

System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.
Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page
<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it
is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

- --- END Linux HAM HOWTO part 1/2 ---

1524. Re: Radio Shack HT-deaf

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.11970.7585.0NFBB745@woodybbs.com>
Source record: 236134

Subject: Re: Radio Shack HT-deaf

>>We constantly see posts about problems with these RS Korean HTs.

No - we don't. We see re-stated, non-first-hand experiences, and modern day myths repeated over and over. We see people repeating rumours and non-truths from a bad batch of HTX-202s from over 5 years ago.

Unless you have first-hand experience with the equipment mentioned in a thread, why not press your ENTER key and pass it by? Why add your name to a list of rumour-mongers and people whose statements we should not trust?

>>...extended warranties...

Eight bucks a year. Full parts and labor. Even after a little user abuse. No, I didn't purchase an extended warranty last year when I bought my HTX-202. (Haven't experienced any problems with it, either. But it's only in use 24-hours/day on packet for the past nine months.)

>>With my Yaesu HTs...[I am happy]...

THAT'S what we want to hear, Duffy. Which HTs? Why? And what features do you like/dislike about 'em? THAT is the type of first-hand experience that proves beneficial to ALL readers.

Clint Bradford

1528. Commercial Radio Exam Opportunity * Sat. November 4th * Cambridge MA

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-02 00:00:00 UTC
From: w1gsl@ATHENA.MIT.EDU
Message-ID: <47bllu$bm5@senator-bedfellow.MIT.EDU>
Source record: 236175
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sci.electronics,rec.boats

Subject: Commercial Radio Exams * 4 November * 10 AM * Cambridge MA

Summary: MROP GROL GMDSS Radar + Radio Telegraph Operator exams

** FCC Regulatory fee eliminated **
** Question pools to be changed effective Dec 1 1995 **
** New questions pools have been released **

Keywords: Radio Exams Commercial GROL GMDSS MROP T2 Radar

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 77 Mass Ave, Cambridge MA in
MIT's room 1-150 at 10 AM.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

At least for the moment the FCC has eliminated the $35 regulatory
fee charged when applying for for 5 year licenses. A similar fee
may be imposed in the future. This does not change the $35
examination fee we charge to give the exam.

This may be your last chance, with the questions from the original
pools. The GMDSS question pools change effective 1 December and
the element 1,3 and 8 (MROP, GROL and Radar) question pools
change effective 1 January. The Radiotelegraph exam will be
updated effective 1 February. If you have been studying from the
old guides now is the time. Copies of the new question pools
should be available now from National Radio Examiners. A
comprehensive study guide to the new GROL questions is not
expected to be published for a couple months.

Our next Cambridge commercial exam session will be held at 10 AM on
Saturday January 13th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For the Telegraph exams bring 2

passport style photos in an envelope to attach to your application.

Copies of the question pools are available from the Government Printing office or from W5YI at 1 800 669 9594. This is probably the best study guide available for the GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West covering the MROP and GROL exam material is now available at Radio Shack.

The General Radio Telephone Operators License is required to service transmitters in the aviation, maritime and international radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required 2nd class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

1529. Re: Various 6m & Antenna Questions

A few answers:
1. USB is the mode of comunication for 6m just as it is for 15, 10 and 20. Just one of those established things..
2. There are now available separate SWR/Power meters for 6 meters. They are made by MFJ.. As far as I know, you cannot get a SWR meter made for 2m, HF or 432 to properly measre anything for 6 meters.
3. Listen on 50.125 (national USB calling freq.) and when the band is open listen down from there (for overseas stuff)
A great book on 6 meters is called "6 Meters The Magic Band" available through WorldRadio Books or your favorite ham store.
See ya on 6

I have the spectrum anal/track gen 8028/8038
Dont expect performance of a good HP analyser, but I think the
unit price/performance is good.
I only worry about service/spare parts.
I have a deffective cable which connects unit to the scope.
A funny BNC lookalike connector on this cable is deffective and it seems
to be impossible through the Dutch distributer to obtain a new cable or
connector. (airparts in alphen a/d rijn)

>
> THANKS FOR YOUR HELP

There is a program that has yet to be started that would allow hams to pay a $30 fee and choose a callsign from the appropriate group that is assigned to their license class. The program is called the "Vanity Callsign" and works quite like vanity plates for your car.

The catch is that you can only request a callsign that is appropriate for your class of license.

For example, an amateur extra class can request any unassigned call sign, while a novice or technician can only request a callsign from "Group D", which is the two by three callsigns like: KB5UAE, KC5ABC, etc.

Your first call sign will be automatically assigned by the FCC. Then, once you've got that call sign, you can request a vanity callsign by paying the extra fee, which is good for 10 years of the license.

Message-ID: <47anu5$4u5g@lamar.ColoState.EDU>
Source record: 236182

Jeffrey D. Stai (jds@neptune.net) wrote:
: I am fairly new still to 6m. In my travels, I have noted several different
: "calling frequencies" for 6m SSB. What I'd like to know is, what frequency
: do real, honest to goodness 6m SSB operators monitor as a calling frequency?
: a) 50.125 MHz
: b) 50.150 MHz
: c) 50.200 MHz
: d) something else?

a and c are what I monitor for SSB, and I monitor 52.525 and two local
repeaters on a scanner.
Don't be surprised at the lack of activity this time of year. There
are usually local 6m SSB nets on Sunday eves at 7 or 8 pm (maybe 9?),
a good time to listen for DX.
6m takes patience and perseverance,
Galen, KF0YJ, DN-70

David S. Curry KG2EB (curryds@craft.camp.clarkson.edu) wrote:
: that, the speed disappears. Now, don't these devices simply transmit a
: microwave signal and time the return? If so, wouldnt the signal bounce

I think police radar is a doppler radar. i.e., the signal bouncing off
a moving object is changed in frequency. When it is beat against the
xmit frequency the resulting audio signal is proportional to the speed
of the object. The time of return is to measure a distance. It doesn't
surprize me the cop would lie. After all, the judge knows the only person
not telling the truth is you.

If you get a close hotel room on your first try, then you have the wrong
weekend or extremly lucky!

I have the dates as May 17, 18, 19.

Jeff Kashinsky (jeff@sec.sel.sony.com) wrote:

Gary,

When U.S. car manufacturers had quality problems back in the 70's and early 80's and people criticized them, did you claim that those people just had a "hard on" for GM, Ford or Chrysler? Don't you feel that the complaints were justified? Should we just praise RS for selling us lower quality products at higher than average prices? It is not a "hard on", just reality.

If you have never worked at a RS and are not familar with their costs and pricing, point of manufacture, etc., then I can understand your ignorance. I am also not claiming that all of the stuff they sell is poor. Their U.S. made computers were very good, but poorly supported. Before they had their Korean factories, their Japanese made stuff was pretty good. But most of it is overpriced when compared with name brand electronic goods. A product made in Korea is not as good as a product made in the U.S. or Japan. There is a difference in workmanship. Now if the Korean product were being sold at a lot lower price than a Japanese made product, that would be understandable and a consumer would have a reasonable choice. In one case they could pay a little more for quality or a little less quality but go for a lower price.

I just believe that many of the RS products are poorly manufactured and overpriced. Some people are willing to overlook the quality and the high prices. I am not one of those people. I want value and quality for my money. Is it asking too much to expect quality and value?

```
I am looking to buy a wireless communication device
that can transmit over 150 miles (250km). It cannot be a cellular
phone since the infrastructure for cellular phone is
not available. The requirements are for point-to-point communication
over long distances. Security issues have not been decided.

What kind of device will solve my problem?
If radio, what type of Radio communication device will suffice?
How much will this cost?

Please reply to rguha@bnr.ca since I usually don't frequent these
newsgroups.

Hello all!

I'm still looking for schematics for a very simple, single freqency
crystal controlled 8m cw transmitter and/or receiver. I have found
lots of fancy, tunable units, etc...what I need is a very stable,
one frequency unit. It's for telemetry - low power is fine!

Email to ejacksch@bnr.ca would be greatly appreciated.

Thanks,
Eric.

: Gary Try AES (Amatuer Eletronic supply) I think it's on Sahara Blvd. In
: Las Vegas, Or if I'm wrong maybe Someone else will Correct Me :] you
: should be able to find it in the phone book when you get there!

Actually, AES is on Rancho. From the strip, take [15] North to the
[93/95] North (to "Mercury") through the Spaghetti Bowl (just look for
all those annoying Fitzgerald's billboards), stay in the right lane
and exit Rancho, turn Right, head up about 1/2 a mile and look for the
beams on the right side of the street. The store is in a strip plaza
facing south.

From Downtown, you can take Bonanza to Rancho then turn Right.

Do you have anything other than racist blather about Korean quality, and venom toward Tandy's excellent warrantee plans, to offer? In other words, what exactly is your complaint about the HTX-202? Have you had service problems with one? Has one you've owned failed to meet its published specifications? Where's the beef?

And BTW, as someone who has to work on electronic equipment every day, I can tell you that your slur against Korean electronics is just so much BS. I'd rather have a Goldstar than a NEC any day. I've been inside both, and know which is better engineered and built. And in case you don't know, the Japanese subcontract a lot of their stuff to Korean companies, and Indonesian companies, and Filipino companies, and increasingly to Chinese (Red variety) slave labor companies.

You regularly post diatribes against Tandy here, but offer no hard facts to back up your claims, or even an explanation for your personal vendetta. A company with over 7,000 retail outlets, selling, if my informal survey of what I see hanging on amateurs' belts is any guide, probably the most popular 2 meter HT on the market, is not a company like GM or Ford of the 1970s. Their market share is not declining, and they appear to be sharply cutting into the market share of some heavily advertised Japanese brands, at least one of which actually does deserve condemnation for appalling performance and quality problems. The Japanese companies themselves have done quite well disspelling the myth of Japanese quality superiority. All you have to do is listen to the howling intermod on one of their Gameboys and compare it to the solid performance of the HTX-202 to see that.

Sure, its no Motorola, but it comes closer than the Japanese Gameboy radios. I say that as the owner of one of those Gameboys, I've used and tested several HTX-202s, but don't own one simply because I want dualband capability, and they don't offer that. But in terms of raw performance under high RF condtions, the major Japanese brand name radios aren't in the same league with the HTX-202. Radio Shack products are generally lowball, and sometimes are of spotty quality, but their HTX-202 is a gem.

>If you have never worked at a RS and are not familar with their costs
>and pricing, point of manufacture, etc., then I can understand your
>ignorance. I am also not claiming that all of the stuff they sell is
>poor. Their U.S. made computers were very good, but poorly supported.

Now *that's* funny. From the TRS-80 forward, their computers have been very overpriced junk. Popular junk in a time when there was little else standard in the personal computer industry perhaps, but junk nonetheless. Today they act as resellers for national brands like IBM, but their price point is totally non-competitive. Any Taiwan clone reseller can slap you together a better system for less money.

Radio Shack, like Kmart, buys in bulk, so their margins are high, but with 7000 stores to stock, so's their overhead. It's like buying groceries at the 7-11 rather than at Kroger, you're paying extra for the convienence of only having to go down to the corner to do your shopping. So 7-11 and Tandy make a good profit by being convienence stores, good for them. I'm not one to begrudge a company charging what the market will bear. It's the American Way.

If you want cut-rate pricing, don't look for it at the 7-11, or at Radio Shack. That's not their niche. Go to Walmart or Sam's Club for your radios if you don't like the Shack. Good luck finding anything, however. Radio Shack should be commended for carrying amateur products at all. Its such a small market niche that its really amazing that they bother. And it says someone at the corporate level cares about amateur radio that they offer a product as good as the HTX-202 when the volume it generates probably barely covers the overhead of carrying it.

Frankly, I'm sick of the carping about Radio Shack I see here day after day. People complain about Radio Shack clerks, but, people, do you expect the clerk at 7-11 to give you a nutritional lesson when you go in for a Slurpee? You're lucky if he speaks English. Realize you're dealing with a convienence store here, staffed by mostly part time minimum wage help. Your expectations are out of line.

And people complain about the high prices at Radio Shack for small components, fine, order from Hamilton Avnet next time and wait 30 days for the backorder notice. *Theoretically* you saved a few cents, but where's the part you needed last

March? Still on backorder? At least the part is on the wall
at the Shack, even if it does cost 10 times what you could
get it for from a bulk distributor, if the big guy didn't
have a $50 minimum order, and if he didn't put you on a
"forever" backorder. Tandy is a very successful company,
and there's a reason for that. Like 7-11, they're there
when you need them, with what you need, when you need it,
even if it may be a touch more expensive and you have to
find it yourself because the clerk doesn't have a clue.

}
}
}>Would these indicate a speed on his display?
}
}No, only a speed greater than the cruiser will display. The cruiser
}speed is subtracted from the received Doppler shift.

I thought the units were required to have a dual display for this
usage. One to display the cruisers speed and one to display the target.
Further, many states have stopped the practice of using radar while moving.
The computers, ignition, fan motors in the AC, all can interfere
with it's operation. Here in Fl. The troopers can only sit still with everything
else in the vehicle OFF! This came about when a news crew demonstrated the above.
}
Also, the departments with any decency will have a very rigid training course
before they allow the officers on the street with radar. One of those
requirements is that they be able to estimate the speed of a vehicle within
5MPH or they don't receive their accredidation.

There is also a certificate of calibration required with these things.
Every department has different requirements, make sure you know what they are.
If the cop shows up without the certificate, he can't prove his equipment is
operating properly.

There is a web page that has a bunch of good stuff on radar. But, drat it all,
I guess I didn't add it to my bookmark list. Can anyone help here???

GOOD LUCK!
Bruce

>>> the calling station comes back and says "nothing heard."

A useful way of letting the called station know, for example, that its attempt to answer was not heard because its transceiver was in simplex mode, or because its transmit power was not sufficient. There are plenty of times when you can hear the repeater but it can't hear you. "Nothing heard" isn't meant for the ears of everyone else on the repeater; it's meant to let the called station know that if it's trying to answer, it needs to try something different.

I agree with above reference to being helped by a licensed ham not always meaning what it sounds like. If you can hear the conversation between some of the hams on our local repeater, most of you better informed hams will laugh.

Just because they passed a test that anyone can memorize does not make them an authority on electronics. I still hear Bozo statements from hams who have been into the hobby for many years, like:

"You are real strong into the repeater. I am getting full scale on my meter!"

"I can't understand why you are noisy. I am getting full scale on my meter."

"You better not drain your batteries all the way down, because their memories will be shot!"-----This was heard in a conversation in a Radio Shack store between a Radio Shack ham and one of his newly liscensed

ham customers.

" My HT drains too much voltage in the car because I get alternator whine!"

"My antenna must be broken. I get almost a dead short from the center conductor to ground"

"There must be something wrong with the repeater. I hear paging tones all the time."

These statements were all from "liscensed hams". Need I say more?

I was stopped in January on the I-75 near Valdosta. I had driven up
from St Pete's (Fl) with the cruise control set for 65, and forgot
to reset it upon entering Ga.

The officer did *not* offer to let me see the radar, which he said
showed 71 point something. Should I have insisted?

As it was, he seemed more worried that my license didn't have my
picture on it. After producing my passport he let me go with a stern
warning.

Yes, and I've done it in the dim-and-distant past.

I used a device called a PC-PAL (about 60 UK pounds) to convert the VGA into composite PAL video, and then fed this into a Microwave Modules MMT435 70cm TV transmitter. The PC generated graphics / callsign / colour bars etc, and was used in conjunction with a camera (the MMT435 had an integral switch for two separate inputs).

I guess that similar devices are available to convert VGA to NTSC for the USA, and if you're into nostalgia, some *CGA* cards included a phono socket which gave a composite 525 line NTSC colour output, so if your application supports CGA there's another avenue to explore.

>car and think that these people simply add 5 or 10 miles to the speed and then
>cant show you the results. Boy, that sure makes it hard to respect them.

1. The simplest solution is to drive the speed limit!

2. The one time in recent years I have been pulled over I was driving a
grey station wagon (Volvo) on the way home from my parents house with the
wife and the kids in the car. After the policeman ran the usual checks he
asked me to step out of the vehicle and walk back a few dozen feet behind
the car (I did). He said that he didn't like to chastise people in front
of their kids. He also indicated that I could get a $140 speeding ticket
but was in stead writing my up for a $40 seatbelt violation (we all had
them on). I was glad to "get off easy", thanked him, and was on my way.
BTW think about the first comment he said, it seems clear in retrospect
that if a policeman is chastising a parent this will make the policeman
seem wrong in the children's eyes since young children automatically see
the parent as always being right (it's natural).

Anyway, slow down and you won't have to worry about it. If you are
driving the speed limit (even in a sports car) they will leave you alone.

I would rate mine a 4.7. I love the radio. I used to have several HTs
including a dual-band. I got rid of all of them in favor of this one.
I also used to own the HTX-404 and only got rid of it because I didn't
use 440MHz, but would rate it about the same.

If FAA plans on using it (differential, of course), it must be pretty dam accurate for even the most critical approach categories. You can get some good information on GPS/DGPS from the USCG server at http://www.navcen.uscg.mil, or you can gopher into it at gopher.navcen.uscg.mil. FAA also uploads its GPS info on this server....Ron, W4VR

: I hear hams say "clear and listening." Why would anybody say that?
: Clear means you are leaving the air, listening means you are staying.
: Which is it?

'Clear' means the *frequency* is no longer in use, 'listening' is
self-explanatory.

: On repeaters I hear a station call another but when there is no reply,
: the calling station comes back and says "nothing heard." Does the caller
: think we are all deaf and feels a requirement to state the obvious?

No, the caller is saying that if the station they called responded, the
repeater didn't hear it or didn't retransmit it, meaning the called should
check their power levels and CTCSS tone if they heard and responded.

Please have some compassion for those AFFIRMATIVE ACTION CLASS operators, who no matter what, do not have the ability to learn a simple, basic form of communication..the amateur welfare recipients...I think it's a great idea to even just do away with the exam totally (including written). That way there will be more people to buy radios and all the major manufacturers will have greater profits...people will be able to enjoy talking..and the ARRL will sell more magazines...With no exams there will be less government expense for licensing..no exam fees..After all the radio frequencies belong to us all...a gift of god...The government has no right to give them to us---we already own them...One day I will get me a radio when I don't have to study for the license..

>Go read up on Ohm's law. I think it would be 30,000 _volts_.
>They're different. DUHHH!

No, no, no, Al, they are watts! You probably are not a member of the CDRCC (Californian Death Row Contest Club). Every time there is a candidate for frying, they arrange a meeting in their club home and bring their Californian Kilowatt-Amps along. They have a direct feed to the chair with Flexwell Coax. All amps are then switched parallelly and on the sign from the executioner, the head of the club (K1LL) takes the TS850SAT (SaveAltTasteless) and yells "CQ Contest". It is watts, not volts killing our friends.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 NOVEMBER AND FORECAST FOR 04 NOVEMBER - 06 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/010

GOES satellite data for 02 Nov
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Nov 05 Nov 06 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Nov: 073/010

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 02 Nov
Learmonth 5 1222 1211
Fredericksburg 7 16
Planetary 10 15

Observed Kp for 02 Nov: 2434 3320
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Nov 10 Quiet to unsettled
05 Nov 10 Quiet to unsettled
06 Nov 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 27 was issued on 27 October and is current for interval 31 October to 5 November. Geomagnetic activity appears to have declined. This recurrent activity was shorter in duration and less intense than previous disturbed interval (3-9 October).

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Nov normal normal fair-normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Nov normal normal fair
05 Nov normal normal fair
06 Nov normal normal fair
COMMENT:Degraded HF comms conditions possible for mid-high
latitudes 8-9 November.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
03 Nov -2

Observed Australian Regional MUFs:
Darwin and Townsville MUFs were near predicted monthly values. Sydney
MUFs were depressed 15% and Hobart MUFs were depressed 15-30%.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 Nov 5 Near predicted monthly values
05 Nov 10 Near predicted monthly values
06 Nov 10 Near predicted monthly values
COMMENT: HF conditions for southern regional Australia are expected
to return to normal for today. However, recurrence suggests degraded
HF conditions may be experienced 8-9 November for southern Australia
region.

>Please have some compassion for those AFFIRMATIVE ACTION CLASS operators,

Before you start frothing, I know code...

Your basic thesis is that Amateur Radio has two classes. Those that know code, and those that don't. You further wish to add, that the people who don't no code are a sub-class. Those that do know code are the super-class.

This brings to question, the need for one class of license. This has been proposed many times to the FCC, but they do not like the idea. The ARRL has fought this issue ever since the hobby was destroyed with the incentive licensing program. That program created the class war, and today the war still finds new recruits.

Would people of your self-described "super-class" be willing to work with the ARRL and FCC to finally terminate the incentive licensing failure? What components would you wish to have in this "all-class" license?

With one class, the idea of class warfare will wane, and we will no longer have religious debates.

My own proposal, is that all Hams must first be interested in electronics and radio communication. As such, they will be required to show understanding of hazards, and basic components, terminology, and good citizenship. There will then be indorsements. I envision a linear endorsement, certified by at least 5 others so indorsed. I envision a repairmen indorsement, certified by at least 5 others so indorsed. I envision an Emergency indorsement. You get the idea. Your peers will indorse you, and you will not be authorized to operate in any mode not indorsed.

This makes it a team effort, a non-cheat effort, and probably a lot more fun than isolating yourself, and studying a stupid book that has all the answers so you can be a "super-class" and spit on all those "sub-class."

Then people like this idiot I'm responding too will dry up and fade away.

I know your antenna is the most important part of your rig.

I have no room for a bigger antenna. I have a small yagi on a camera tripod in my 2nd floor apartment.

I do stick the antenna out on the balcony sometimes.

Will DSP and/or a pre-amp help me "pull in" the weak signals on 2m ssb? I can usually tell there is modulation there. It's just so low I can't understand it.

What are the affects of DSP?

What are the affects of a Pre-amp?

Buster

: we're now hearing all sorts of (unlicensed) construction workers,
: apartment maintenance workers, truck drivers, etc. on 2-meters these days?

: -Drew in Charlotte-
: KF4DDM

Ummm, I'm not hearing any of those folks here in my area on 2 meters.
Although we do get an occasional idiot now and then but they go away when
ignored enough.

Tom - KB2SMS

there's a great deal of stuff here on the networks -- pick a favorite search engine like yahoo or lycos and start sifting. (got some pointers at work..was the "clincher" that showed there finally was a practical side to putting a computer on everyone's desk...8))

anyway, there's a lot available from the WWW and other sources. believe the US Coast Guard has a bunch via their web pages.

Yes, but you forgot that the ARRL and W5YI would never support
this, because they'd lose too much money from their sales of
exam preparation materials. Think of all those code tape,
question pool answer guides, and video tapes they wouldn't be
able to sell.

1586. This Week in Amateur Radio #136 (for air through 11/10/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-03 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RFPHpfV.sanderman@delphi.com>
Source record: 236083

Here is a summary of news items covered on edition #136 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 10-Nov:
-
1. WRTC-95 in Geneva Considers Elimination of Morse Requirement
2. FCC Grants General Electric Waiver to Market "RF Lightbulb"
3. Commission Official Moves from WTB to Common Carrier
4. Amateur Examination Fees Again Increased by FCC for 1996
5. New NNY Section Appoints Interim Section Manager
6. Upcoming Special Event Stations with George Bowen, N2LQS
7. Shuttle Continues Lengthy Mission, Plans Readied for STS-74
8. Intel Announces New Smaller 120 MHz Pentium Processor Chip
9. Oman to Offer Special Event Station Award Next Month
10. Special "PacSat" Software Available for Your Computer
11. "Amateur Radio Newsline" - Edition #951 from Los Angeles
12. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
13. Weekly Propagation Forecast
14. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the AREC Repeater Group, of West
Palm Beach, Florida, which carries "This Week in Amateur Radio" on
the WA4HXZ repeater on 146.67 MHz, and heard in West Palm Beach,
Fort Lauderdale, Jupiter, and the Bahamas. Satellite time and
uplink equipment have been provided by SKYVISION as a service to
the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EST) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at

518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

By: Auxiliary Communications Service (ACS), the volunteer
communications reserve of the State of California
Governor's Office of Emergency Services

RB403 for release 11/6/95
OPS - Training - Local Log Jam 4/4

A group in a large city got together and formed its own emergency net. Each week a different member was the net NCS and provided that weeks emergency scenario. Each participant responded as if it was the real thing. In time their proficiency attracted attention and their services became in demand. Perhaps your unit can do something similar.

Another approach: find someone in your unit that is very very good at interpersonal relationships, has a vision of the future and how the unit can strengthen and support the government as a DIRECT PART of the agency, working FOR the agency just like paid staff. Ask that person to serve as the Radio Officer. Expect that person to take the time and effort to go into the agency and become part of it and find ways for the unit participants to solve its needs, however little it may initially seem related to "communications." It's the building of the relationship of trust and rapport that makes it all possible. Some people do this on the golf course, some in clubs or groups, some in direct relationships and others by going in and doing the needed functions, actions and work. I personally have found the latter to be most effective over time.

Do NOT select a Radio Officer because he or she is very good at technical aspects. Extremely few technicians are strong in management skills, and can be very undiplomatic at times. By management skills, here I refer to the ability to manage the relationships between people affirmatively and positively for the benefit of all concerned; to solve problems and bring people into an expanded use of their skills, talents and abilities. To help each person to rise to new levels of achievement by making it a

pleasant experience. [End of series]

When using a repeater to call someone who does not answer, I often
come back and say "nothing heard" as a way of saying that I have given
up and the repeater is now free.

I appreciate it when others say something to indicate that they are through
with the repeater.

>
>Do we have to go through this every 6 months?

I guess we'll just have to keep going through it until you get it right.

>You pick an exceptional
>case - he was not the norm. But even so, in the earlier part of this
>century making new discoveries without formal training was not the
>challenge it is today; the limits of knowledge were within grasp
>of the amateur.

That's an absurd statement for several reasons. The first of which
is that there are no known limits to knowledge. You sound like the
head of the US patent office in 1890 who claimed it might as well close
it's doors because everything worthwhile was already known, and there
was nothing new left to be invented.

Now it's certainly true that the total body of what we assume we
know is larger today than it was in the past. And there are no
Aristotles or Archimedes' or deVincis around who can claim to
know *all* of it (and besides it turns out much of what they thought
they knew was wrong anyway). But that's not a requirement for making
an important contribution to a particular field of endeavor. Each
worker only has to master the niche in which he works. That niche
can be very narrow in some cases.

It is true, however, that over-specialization is the bane of
recognizing major breakthrough discoveries. The overly-trained
specialist is like the man with only a hammer, everything looks
like a nail to him. This is one of the problems with formal
training, it tends to blind the overly-trained worker to new

ideas. He's like the drunk looking for his keys under the
street lamp, though he dropped them across the street, because
the light is better under the street lamp.

Lets list some examples closer to current times of amateurs,
with no formal training in the field, who made major breakthrough
developments.

The person who developed the image dissector tube, the first
practical television pickup device using electronic scanning,
was an amateur, a 16 year old amateur, at the time he developed
the idea. He patented the device and sold it to RCA where it
remained the basis for television cameras until the recent
development of solid state imagers. His name was Philo T Farnsworth.

The person who invented spread spectrum technology, both DS and FH,
and who first brought it to practical realization, was an amateur
with no formal training in electronics at all. In fact, this person
was an actor. Her name was Heddy Lamar. She also contributed to
a number of other inventions outside her specialty field, including
work on the first practical homing torpedeo.

Admiral Grace Hopper was working outside her formal training when
she invented high level programning languages. And Moore, an
astronomer, invented the ubiquitous real time control language
Forth. And lets not forget Jobs and the Woz who invented the
Apple computer in a garage, starting a whole industry.

Less well known perhaps is the Chattanooga kitchen table tinkerer
who invented the quick release ratchet, found in every mechanic's
toolbox. He had no formal mechanical engineering degree, but
caused a major change in the way mechanics work.

Or back on a more theoretical level, there is Dr. Thomas Gold,
an astronomer and cosmologist, who has made a major theoretical
discovery pertaining to the origin of oil and gas. His book,
"Power From the Earth" has seriously shaken formally trained
petroleum geologists' notions of where to look for gas and why.

>Those working in RF engineering *now* are not self-taught - they've
>earned at least a 4-year BS if not an MS (at least 2 additional
>years) in their field.

You might want to consult your university EE department about
this. See if they offer a degree program in RF engineering.
I doubt that they do. It's a very narrow specialty, and few
schools offer degree programs for it. In fact, most working
engineers are largely self-taught in this specialty. They
may hold EE degrees, or they may not, but it's unlikely that
they hold a degree in the specialty discipline of RF engineering.
I know some with physics degrees, some with math degrees, and
even one with a degree in agronomy. I also know several with
only a tech school or military training background.

>"Amateur" RF engineers, if they had the BS or MS, wouldn't be
>"amateurs" - they would be working as professionals, for no one
>would go through that 4 or 6 years of formal training "for the
>love of it".

But of course, as noted above, even the professionals in this
field rarely have a BS or MS in their specialty. The field
is primarily dominated by those who obtained their skills the
same way amateurs do, by OJT and experience. Amateur radio is
nothing if it is not a lifelong OJT experience.

>I contend that there are few, if any, amateur radio operators
>that have self-taught engineering skills that come close to
>those of the professional with his/her associated university
>and OTJ training. Prove me wrong if you can.

Well, gee, that's easy. I only have to point you to the
proceedings of the Central States VHF Society to show you
professional level work by non-engineers, or to the proceedings
of the xxth Computer Networking Conferences or the proceedings
of AMSAT-NA Space Symposiums. In all of them you'll find papers
of professional quality reporting on professional level work
by amateurs with no formal RF engineering degrees.

>>Demeaning amateurs because they are willing to work without pay
>>is an insult to all those who have worked so hard and so long at
>>their chosen avocation.
>
>Ridiculous. Four to six years of 4 hours of class daily plus 4 hours
>of homework nightly while attending a university cannot be compared
>with the amateur's self-study methods. You're demeaning the professional
>by elevating the amateur. "Worked so hard and so long"? Is your
>amateur giving up many hours of sleep weekly for many years in
>preparation for exams, quizzes, homework, and completion of lab
>projects? Does your self-taught amateur worry about a GPA or
>project deadlines or final exams?

No, he doesn't have to worry about any of that, mostly irrelevant,
stuff. Most of that study isn't directly pertinent to the professional
field in which the student eventually will find himself. The amateur
need not concern himself with it. In the 6 years I spent in universities,
perhaps two courses total directly related to the work I do today.
Some others were useful background, but the majority of it was a
waste of time if I only wanted to gain the knowledge necessary to
perform at a professional level in my occupation. That's not to say
the time was wasted, a broad background in science and technology,
history and economics, and even English literature, makes me somewhat
of a more informed and well rounded person. But most of it had no
direct bearing on my eventual work specialty. Most of that I learned
the way most working engineers learn, by doing, hands on, outside
the academic environment. I've learned more about my field in an
industrial seminar than I learned in 6 years at university. I don't
think I'm atypical in that respect.

>I supposed that you also believe there are many private pilots with
>skills equal to those of professional airline pilots. If so, then you
>ought to consider escaping from the little fantasy world you reside in.

Indeed, I know several private pilots who are more highly skilled
than the glorified bus drivers called airline pilots. Most any
aerobatic pilot is a more skilled airman, and certainly most pilots
operating Ag-air are more skilled than the average airline pilot. Of
course there are some airline pilots who are both, but they're the
exception rather than the rule. Most come directly from driving a
military bus, multi-engine bomber, to driving a civilian bus. They
are the guys who couldn't cut it as fighter pilots and had to settle
for second best.

Perhaps you should come out of your little academic ivory tower
and see what the real world is like.

Gary

Version 3.0 of CAPMAN, Communications Analysis Prediction Manager, is now available with many enhancements.

A mapping module is also available that provides color contours of: MUF or S/N, Reliability, Angle, Field Strength, Antenna Gains,
Virtual Height, Loss, Range and more relative to frequency, projected on a user specified area or the entire world map.

See ads in the current issue of NCJ and CQ for more details.

BTW, it also wastes your time and irritates the pig when you try to force
him to learn an outdated mode of communication like Morse code. Even
pigs are more sophisticated than this in 1995.

I test drove one at a vendor's table at a hamfest. I don't recall the brand name, but it was around $39. On-the-air reports indicated very low audio level. I had to shout to be heard. And of course, in normal use, one would appear to be shouting at no one. This could make one look a bit silly, if not raving mad. Perhaps the more expensive version might be better.

1615. Re: Police radar, was he lying?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-04 00:00:00 UTC
From: rkenner@saba.kuentos.guam.net
Message-ID: <47gmpo$21s@lehi.kuentos.guam.net>
Source record: 236013

I spent 10 years policing down in S Texas and worked a lot of radar.
Most people (even some police agencies and courts) have the wrong idea
about how it is used.

Of course, everyone here needs to remember that every agency, every court,
and every state have different regulations and philosophies. Testifying
about speeding is in great part no different from testimony about any
other traffic violation. The cop sees it and he writes a ticket.

In short, your officer was right. The proper way to testify to radar
checked tickets is for the officer to (after going over in court his police
experience and some of what happened just before the vehicle came along)
is to say something along the lines of:

"I observed a [insert vehicle type] proceeding
[describe a direction] moving at speed which in my experience and
training as a police officer was in excess of the [insert local posted
speed limit]. I checked that vehicle's speed with my [insert radar
type], which showed that the vehicle was travelling at [insert speed]. I
had checked the radar unit before and after the stop for accuracy and found
the unit working properly."

It is up to the judge [or jury] to decide if the officer's testimony is
more creditable than your testimony. But the key is that in his/her
experience and training as a police officer he observed the vehicle
travelling at a speed greater than the posted speed limit. He only
verified/quantified this observation with radar. The radar is not, as
someone pointed out above, a witness against you. In many jurisdictions
the police could just as easily have written a ticket for "unsafe speed
for conditions" and pulled it off.

Going back to the top of this post, I have testified in courts that if I
couldn't show the individual the radar when asked, then the court would
dismiss the case. But I have also testified in courts where it didn't
matter since it was my testimony against the driver's testimony. I said
I saw a certain speed on the radar, and that was the end of it because
it only verified what I observed.

This actually happened a lot with handheld CMI units that would often pop
the lock button out on the trigger when you dropped it into the seat and
threw the car into drive.

Can you beat it? Maybe. Get an attorney? That's up to you and your
state's "points" situation and your insurance situation and what kind of
jack you've got to spend fighting the case. Very clearly it's a case of
"you can beat the rap, but you can't beat the ride," or, in other words, it

will cost you time and money, regardless. So the police win. Rest assured that the cop in the street doesn't give two hoots in hell what happens with your particular ticket.

Rick - NH2F

From: LARRY ROLL Refer#: NONE
To: STEVEN HILDEBRAND Recvd: NO
Subj: Burt Fisher: The Legend! Conf: (10) HAM

Steve:

Burt does EVERYTHING better than everyone, don't you know that by now? He's a one-man army, the hero of heroes, and a legend in his own mind! I just hope I get a chance to meet him in person some day and see what he's really like! But for now, all I can do is read his posts here on Fidonet, where he graciously tells us of his overall superiority as a human being, ham radio operator, lover, etc. and just dream about being like Burt when I grow up!

I think Steven Spielberg should do a film all about the adventures of Burt Fisher. Burt could be played by Harrison Ford, his wife by Anne Archer. The screen play should be based on the upcoming novel by Tom Clancy entitled "Burt Fisher...A Clear and Present Hero of the World!" I can't wait...it should be quite entertaining to see how normal, everyday people stumble around, trying to muddle through their pitifully dull lives somehow, while Burt Fisher stands apart from them all, serving as the shining example of perfection for all to emulate.

I think Burt should also have his own nationally syndicated radio talk show, just like Rush Limbaugh or G. Gordon Liddy. Instead of the "Excellence In Broadcasting Network" his show could run on the "Overwhelming Superiority in Broadcasting" network.

Of course, Burt probably agrees with all of this. After all, a person with all of Burt's qualities has no need for false modesty. And, it's just as well...after all, how we know about all of Burt's fine qualities, and our own shortcomings, if he didn't tell us of them!

Ah, yes...Burt Fisher...the man, the myth, the legend! Burt Fisher for President? Naw...that's too lowly an office for him. We need to think of something a lot better. Dictator? Chancellor? Fherer?

Hey Burt...I know you're reading this...how about an autographed picture?

1619. A story

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-04 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8036-25650603@ccsnet.com>
Source record: 236017

Well I have at least one story to tell related to a spark transmitter.
When I was stationed at Otis AFB I had a lot of trouble sleeping because
the guy in the barracks near me played his AM radio real loud. So I
hooked up a buzzer to my 40 meter dipole and wrapped the buzzer in a
blanket (to silence the SOUND) and when he played the radio I turned on
the buzzer destroying his station. After several days of this I offered
my "help" suggesting that playing the radio too loud caused it to
"oscillate", he played it lower and he had no more problems.

1621. A Real MAN who was a ham and is now a man

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-04 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8036-256506605@ccsnet.com>
Source record: 236019

Recently I wrote a story that showed hams for what they are,
very self involved and less than caring about their families.
The story was a take off on a commercial in which the "fellows"
are playing golf while "Dick" is not there and the "fellows" are
laughing about how his wife has a ring through his nose making
him do "honey dos." The commercial the shifts the scene to show
Dick and his wife engaged in clean light love play thus
highlighting what was REALLY important. My story drew a parallel
between devotion to contesting and a lack of devotion to one's
wife. It was one of the more insulting stories about hams I have
written. Most of the other similiarly insulting stories receive
plenty of comments, this story received only one which is below.
Why?
Hams are so far out of the normal structure of society, they
cannot even understand the message and/or the "insult."
Here is one who did, learn from it, wake up before it is too late.
Note: Where it says "BF>" that is a quote from the original story.
I have withheld his name but will release it to any who doubt
the story.

BF>is complete fiction.
BF>

Burt well you go me nailed to the cross on that one. I am guilty
of ignoring my wife at times and it is not due to contesting.

See Burt I am the local "Dummy Load". What you might ask is a dummy
load that is a person who can't say no to friends. He is the guy who
will take the time to help set up a freind of a friends
shack. At the local club will volunteer for task others say they don't
have the time. He is at all attenna parties and goes to the local candy
store to p/u the connector you need but don't have the time to get.ect...
but sometimes overextends himself and doesn't even have the time to do his
own honey dews.
Burt my wife would love me to get involved with contest if that kept
me home. What you just said really hit home but not the contest part.
time and has to change family plans to help others and to top ot off
thoose late night "Emergency calls".
I just realize I spend "Quality time" with my kids but with my wife
I don't I just take her for granted. Last Saturday I said I would be with
her so what did we do, went to HRO so I could win a door prize.
I am going to go out and p/u my
wife some flowers and candy take her to a NICE dinner and then shut off
the phone, Beeper,Computer, radio and put up a Do not disturb sign and
spend a quiet evenning getting to know my wife again. Kids of cousre will
go to a babysitter. I can't remember the last time we did that.

Please don't echo this message all over the place but thanks Burt for
giving me a wake up call.

Note from Burt- I have since received permission to quote the message.

In <1995Nov3.062304.3765@ke4zv.atl.ga.us> gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>Do you have anything other than racist blather about Korean quality,
>and venom toward Tandy's excellent warrantee plans, to offer? In other
>words, what exactly is your complaint about the HTX-202? Have you had
>service problems with one? Has one you've owned failed to meet its
>published specifications? Where's the beef?

Oh, now this is too funny. Critisize the quality of products made in a particular country and that is racist. I guess one should expect this kind of double talk today in the present political climate. When you don't like something said about someone immediately go to the racist charge. The beef is that goods made in Korea are generally not of the same quality is goods coming from the U.S., Japan and many of the Western European countries. Most educated people recognize this. It's your problem if you see this as racist.

Meeting specifications is something totally different from quality. A product can meet electrical specifications, but can be poorly or cheaply constructed.
>
>And BTW, as someone who has to work on electronic equipment every
>day, I can tell you that your slur against Korean electronics is
>just so much BS. I'd rather have a Goldstar than a NEC any day.
>I've been inside both, and know which is better engineered and
>built. And in case you don't know, the Japanese subcontract a
>lot of their stuff to Korean companies, and Indonesian companies,
>and Filipino companies, and increasingly to Chinese (Red variety)
>slave labor companies.
>
>You regularly post diatribes against Tandy here, but offer no hard
>facts to back up your claims, or even an explanation for your personal
>vendetta.

I have offered numerous hard facts about Tandy's retail policies. There is no personal vendetta only a crusade to get Tandy to improve the quality of the goods it sells at premium prices.

A company with over 7,000 retail outlets, selling, if my
>informal survey of what I see hanging on amateurs' belts is any guide,
>probably the most popular 2 meter HT on the market, is not a company
>like GM or Ford of the 1970s. Their market share is not declining,

GM and Ford's market share has been steadily improving. In fact in the past couple of years they have taken away some of the market share the Japanese took from them over the past 20 years. This has recently been published. Let's look at Tandy. They have lost market share in computers; that is no secret. Were are your facts to back up that they are gaining market share? I find it very hard to believe when you see the likes of Best Buy, Circuit City, Sun and numerous other electronic retailers that offer competitively priced, name brand goods plus IN and OUT of warrantly service. Tandy is facing some serious competition.

>and they appear to be sharply cutting into the market share of some
>heavily advertised Japanese brands, at least one of which actually
>does deserve condemnation for appalling performance and quality

What is Consumer Reports saying about the quality of Tandy's private brands versus the competition? I rarely, if ever, see the RS brands rated at the top. It is usually the Japanese name brands.

>problems. The Japanese companies themselves have done quite well
>disspelling the myth of Japanese quality superiority. All you have
>to do is listen to the howling intermod on one of their Gameboys
>and compare it to the solid performance of the HTX-202 to see
>that.

What the heck does the above mean? Gameboy versus the HTX-202?

>
>Sure, its no Motorola, but it comes closer than the Japanese
>Gameboy radios. I say that as the owner of one of those Gameboys,
>I've used and tested several HTX-202s, but don't own one simply
>because I want dualband capability, and they don't offer that.
>But in terms of raw performance under high RF condtions, the
>major Japanese brand name radios aren't in the same league with
>the HTX-202. Radio Shack products are generally lowball, and
>sometimes are of spotty quality, but their HTX-202 is a gem.

Are you referring to quality or price when it comes to "lowball" with the RS products?
>
>>If you have never worked at a RS and are not familar with their costs
>>and pricing, point of manufacture, etc., then I can understand your
>>ignorance. I am also not claiming that all of the stuff they sell is
>>poor. Their U.S. made computers were very good, but poorly supported.

>
>Now *that's* funny. From the TRS-80 forward, their computers have
>been very overpriced junk. Popular junk in a time when there was
>little else standard in the personal computer industry perhaps,
>but junk nonetheless. Today they act as resellers for national
>brands like IBM, but their price point is totally non-competitive.

After seeing the post on Super Morse for the pc, which helps build code speed by progressively increasing the speed as you copy, I was wondering if anyone knows of such a program for the mac?

What Mac programs have people actually used to learn and build CW speed?

As for myself, I am up to 10 wpm after a week with MorseTrainer 1.1.1. Had to create my own sections and lessons for it, though.

Hi all
I'm chasing schematics or circut diagrams/proofs full designs
what ever , to make modems, phone modems , fax modems packet tnc. etc...
Can anyone help in this area. I wish to build telecom approved modems
in the not to distant future. I have a pet project: I would like to
program multi port software and I think purchasing volumes of modems
may get expensive. So I'm waying up the option of building them myself.

Any replys with schematics for Australia preferably , if not anything will
do . I can add modifications I guess.

I'm new at the modem game so go easy on the any details :)

It would also make it into a popularity contest, where you would have to
be "one of the guys (gals)" to get your endorsement. Without OBJECTIVE
standards, clearly defined ahead of time, and not subject to the whims of
personal likes & dislikes, such a proposal would be a farce.

10 is open almost every day. The path between North and South America is
especially reliable, although not very strong at this point in the solar
cycle. Last December I made an even 500 QSOs during the ARRL 10 meter contest
on a supposedly "dead" band. They're there.... just listen hard. A simple
three element beam will help a lot. Six elements would be a real eye-opener.

Creeb: Phrasing on +/- 100 meters being 600' leaves question... I'd have said it
was +/- 300' unless I wanted to toss in the loose change.

Accuracies to centimeter levels is two commonly available ways. Leica makes
suvey instruments that use GPS and integrate long enough to get honest to
1/100th a platinum bar in France or the appropriate number of cycles of the
appropriate frequency of light. Leica also inherited some of the Magnavox
differential GPS product line when they bought our commercial GPS products
group. These give on the order of +/- 3 to 5 meters accuracy for vehicles with
the dynamics such as you might find on a ferry boat threading the channels
between Helsinki and Sweeden. (Trust me - they *NEED* it. {^_-})

A lesser used option involves carrier tracking differential GPS which can return
a van to within centimeters of a bullseye on the pavement after drving around
the city. (That is not to guarantee they always know precisely where they are to
that accuracy while driving, though.)

Bandini (tm)

Differential carrier tracking GPS can tell you within a few centimeters your location in all three dimensions relative to a very nearby reference point. (Say the point at which you started the measurement series.)

It all devolves down to what in heck is the proposed application? For a boat there is no reason to report the derived altitude. The person sitting reading the instrument hopes like heck he is within a foot or two of where he thinks he is vertically. If he is not he is in <Bandini (tm)>. However a person piloting a plane would rather like to know altitude. For most of a route the +/- 300' level of accuracy commercial uncorrected GPS gives is plenty good enough. During landing approaches differential GPS could prove so accurate that the commercial folks would want to do what the Military has done for military instrument auto-landings - introduced an intentional random error longitudinally along the runway. Otherwise the runway deteriorates within the 10' circles around the assigned wheel touchdown spots. {^_-}

I don't like to claim centimeter accuracy the way you have in that it implies you know where you are in a city within centimeters using this technique. More precisely you can reposition yourself to a given datum within centimeters. This is a slightly different "solution". Note also that it only applies where you do not have nearby multipath generating objects. Multipath can screwup any thought you might have of centimeter accuracies *REAL* fast. This became very obvious when the GPS prelaunch testset I designed had accuracy problems at the 2-3nS level traceable to a defective design in bulkhead female type N connectors designed for RG-223U cable. (Three manufacturers and two assemblers ALL gave the same impedance bumps at 1GHs to about 1.7GHz. We changed to RG-223 to SMA connectors with bulkhead SMA to N adapters and the problem fell down under 1nS. But talk about problems that are pi**ers to find this one was a class one GEM.) The upshot of this is a *GREAT* deal of scepticism on my part for any position report more accurate than perhaps 4 or 5' unless the site is very multipath free or the measurement takes place over a long enough time to cancel the multipath effects.

Whenever a hurricane is within 300 miles of land in the northern western hemisphere, the Hurricane Watch Net is operational on 14325 kHz USB. The Hurricane Watch Net provides communication between the National Hurricane Center and the affected areas.

During a communications emergency, W1AW transmits special voice bulletins on the hour on 1855, 3990, 7290, 14290, 18160, 21390 & 28590 kHz.

The National Institute of Standards and Technology broadcasts storm warnings on 2.5, 5, 10, 15 and 20 MHz AM according to the following schedule:

This is the kind of information a well organized and coordinated ARES organization would be able to provide in a minute. The only problem with this is that a few well meaning but sadly mistaken RACES supporters have been insisting that each jurisdiction have its OWN cadre of volunteers and that NO HAM volunteer for more than one agency. This leads to a situation where the opportunities for cross training and familiarization with different disaster service organizations is kept to an absolute minimum. The final result of this is that the synergy that might've been obtained is lost and a ready pool of TRAINED operators is not available. Worse, when a major incident occurs for one organization, they do not have a trained pool of communications volunteers to draw on, even if the people exist because many of them, perhaps the vast majority, are registered with and trained by some other organization that takes a VERY propritary view of their volunteer resource.

The result is that ARES/RACES does not function anywhere near as well as it might. The ultimate losers in this are then the general public that the disaster service organizations are alleged to be helping.

One thing that you will need to do to receive GPS is be able to recieve a spread spectrum signal. If you know what that means, then you likely know more about GPS than I do. If you don't know, you are unlikely to build a successful GPS receiver. - Glenn Thomas wb6w

>in bed. Guess she got tired of you downloading binaries from the
>internet and stuff. Heh heh m heh.

Yeah, you're cool now. All you proved by writing this response is that you can insult people just like a first-grader. There was little point to making your comments. If you agree with Burt's ideas, tell him. If you disagree with what he says, tell him, but act like an adult- or don't put it on the newsgroup.

This thread has been going on for far too long now- and I doubt it has anything to do with amateur radio anymore. Is there any chance we can let it die now?

Thank you and have a nice day.

In these times, the FCC has had to save some $ and have been turning off the propagation generators for many hours of the day. (Sometimes they make some minor modifications to the generators and turn them on without formal notice -- Instead of listening on 10M, Give a CQ. You never know who is also listening!)

If they are similar to any of the other Motorola products 160 Mhz is either at the top of the band or the bottom. If memory serves me correctly Motorola products run in 3 groupings for VHF 136-150, 150 to 162 and 162 to 174. I am not familiar with the 300's but don't be surprised if this is the case. You would have to rebuild the radio from scratch to get it to work. I look after comms for the local Red Cross branch and they are at 162 Mhz and I have had to pass on a lot of free Motorola gear because it was from the lower groupings.

Quite correct. I was trying to get the essentials across without writing the definitive reference on the subject, and may have shot through this point a bit too quickly. Thanks for providing the clarification. I wouldn't want anyone to get their expectations too high.

Given your background in this area, I was wondering if you could provide some insight into something that I've wondered about. Do you have idea what the motivation is for inflicting "the insanity induced by SA and dither and all that nonsense" on the civilian users of the system? Given the ease with which the positioning error induced by jittering the signal can be corrected for with differential techniques, the standard answer of "so the enemy can't use it" doesn't ring true. It seems like a ludicrous waste of money (even by military standards) to have the DoD put up GPS, dither the signal to degrade its accuracy, only to have the USCG and FAA put up differential transmitters to get the accuracy back to about where it would have been in the first place.

Sounds like this is a pet peve of yours. I certainly have one also.
When reading these news groups, I see alot of newbies writing the word
Ham as "HAM" -- in all caps -- like it's an acronym (sp?).

It's not. It's "Ham" or just "ham" radio. The letters H, A, and M
do not "stand" for anything.

Get with the program. :)

Oh, yeah.. I had a discussion one evening with a fellow who
though "ham" were the initials of Hiram Maxim. That would be a nice
story if his middle name was not Percy. Heheh.

You are a ham AND have (and even enjoy) sex?

That is rare indeed.

I've had one of those. They work great and also have a good audio
quaility in the mic. If you have a use for one I would recomend it.
I bought mine used and don't know where a new one could be obtained.

4. Mine has worked well for a year now with no intermod ever heard in a room where an Icom and a Yaesu (sp?) were both unsquelching to out of band noise.

Yeah, a couple of other people were confused by what I wrote.
If you know your location to within 100 meters of a point,
you really only know your location is somewhere in a circle
with a diameter of about 600 feet centered on the point the
GPS is claiming you are. This is your CEP in targeting lingo.

Hi. I heard somewhere recently that Popular Communications Magazine could
be obtained in an alternate format, namely on computer disk.
Can anybody confirm or deny this info? Is anybody currently receiving
this magazine on disk, and if so, how much is the subscription per year?

Thanks,
Chris.

I worked for RS for a year. They know it requires a license to use a ham radio. They don't care. If you have the money, they
will sell it to you. I never would do it. It really pissed off the manager.

>doesn't care who it infests.

Ditto all the stores I've frequented in the Southeastern New England
area

It's always amusing to be wandering around in the electronic
components section only to have the salesmoron come up to you
and say 'is there something I can help you find?' I usually
reply 'yeah, I'm looking for an electrolytic isolinear thermoflux
capacitor with a photoionization ohm restrictor". When their
eyes start to clear a little the next thing out of their mouth
undoubtably is "do you have the part number for that?" to which
I reply "No... but gee, I know its in the electronics section
of the latest catalog." Being ever so helpful they always offer
to go look it up for me, because with a name that long, its
gonna be really expensive and the commission they'll get on it
will buy clearasil for the rest of the month.

While they're off in the back room looking or asking the
"manager" (invariably another zit-faced kit in the back room)
I quietly pick up what I need, pay at the counter, and leave.

The next time I go in, they usually don't bother me.

>73

>Jeff, AC4HF

Jeff,

I've heard lots of good things about this radio. Dual VFOs, 30 memories, Call channel, 45 watts, plus CTCSS encode and DECODE. The only thing I don't like about it is that transmit is from 144.600 to 147.995 MHz, not 144.000 to 147.995. However, it is expandable to MARS/CAP transmit. Can't beat the price this month, either. Never seen a new mobile under $300. I'm going to get one next week.

Not sure who makes it, though. Has same mic and front panel as Kenwood TM-241A and Yaesu FT2200H. However, these radios do not come with CTCSS decode standard. And the prices are higher. When I get the HTX-212, I'll let you know if I like it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 05 NOVEMBER AND FORECAST FOR 06 NOVEMBER - 08 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 075/013

GOES satellite data for 04 Nov
Daily Proton Fluence >1 MeV: 1.1E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.2E+08 (moderate)
X-ray background: A8.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 Nov 07 Nov 08 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 06 Nov: 075/013

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 04 Nov
Learmonth 14 3223 43--
Fredericksburg 13 10
Planetary 13 11

Observed Kp for 04 Nov: 0223 3421
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Nov 10 Quiet to unsettled
07 Nov 10 Quiet to unsettled
08 Nov 20 Active
COMMENT: The geomagnetic field was mildly disturbed overnight. Active
levels expected on 8 November.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Nov normal fair-normal fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Nov normal normal fair
07 Nov normal normal fair
08 Nov normal fair poor
COMMENT:Degraded HF comms conditions possible for mid-high
latitudes 8-9 November.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
05 Nov -7

Observed Australian Regional MUFs:
Darwin and Townsville MUFs were depressed 15-20% during local night.
Sydney MUFs were depressed 15%, with Sporadic E blanketing observed
00-04UT, and 08-09UT. Hobart MUFs were depressed 15-30% with spread F
observed during local night.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
06 Nov 5 Near predicted monthly values
07 Nov 5 Near predicted monthly values
08 Nov 5 Near predicted monthly values
COMMENT: Sporadic E blanketing expected at times today for Sydney
region. Degraded HF comms possible 8-9 November for southern
regional Australia.

Steve,
I recently re-crystalled an FT-101 (put 10m back in it) with crystals I purchased from JAN CRYSTALS in Florida. They came very quickly in the mail and I believe they were about $18.00 each. Nice and friendly company to do business with.

Call the R.L.Drake company for the crystals you need. They are very helpful. They are in Miamisburg, Ohio, and the last phone# I have is (may be out of date, but try it) 512-866-2421. The crystals are about $15 each.

: if you say no, but the most important thing is to treat the person as you would
: like to be treated!

While I agree that we should not take out our anger with a misguided
corporate policy on the salesperson, know that there are many who are very
persistent about getting this information.

I just became aware that RS has a presence on the Internet:

rs.customer.relations@tandy.com

Those of us who do not like the name-and-address policy at RS should
complain loudly, right to the corporate level. For the most part, making
any sort of complaint, even to the manager, just will not accomplish
anything; this is true of most retail businesses.

I have already used the above address to send e-mail, notifying them of the
ongoing discussion/outrage about their policy in this newsgroup.

Better yet: get Caller ID which displays the name and phone number of the person/business calling you. By looking at the box, you will instantly know whether it's an important call or whether it's an unwanted telemarketer/bill collector/boss on day off/ex-boyfriend, girlfriend, husband, wife/other nuisance call. The use of Caller ID together with an answering machine has proven to be quite effective; I would highly recommend it.

Jeff Hall (szhall@rocky.ucdavis.edu) wrote:
: I understand that the extra is easier than the advanced..Why? I would
: like your remarks and any short cuts..thanks..Jeff

This is what I am hearing all the time. I am currently studying for my Extra. Unfortunately, I cannot comment on the difference, as my Advanced dates back to 1968. I do feel that exams were more difficult then [read: technically oriented] but taking them at an FCC office definitely raised the anxiety level, especially if one had to drive as much as 150 miles, as the regs were then.

I am not yet a VE, but as treasurer for our local club, I work with our VE team to collect the fees at our monthly testing session. Just with what I learned from this experience, I took the exam with the full set of questions on the Commissions rules, and scored a 79 percent score cold.

Well, the short cut the works for all license classes is memorizing the question pool. I cannot resolve myself to this approach, after many years of working as an electronics technician, and even more years of being a ham. The best approach for me would be a classroom experience, but our clubs classes cut off with Advanced. This would certainly get me to my goal faster than the occasional self-study from the ARRL manual.

Good luck in your pursuit, however you decide to do it.

Hi Jim,

The answer is...it depends. Unfortunately, the government regulators got their hands on Caller ID and crippled it in most areas by allowing blocking on a per-call or per-line basis. (IMHO, the telephone line is a service that I am paying for, so I have the right to know who's calling me...but that's a subject for another thread) In the interest of balancing the rights of callers & recipients (and protecting the dollar-generating potential of Caller ID...who's gonna pay $6-7/month for it if everyone just blocks it), most areas now let a Caller ID customer "block the blocker" In other words, a feature that automatically intercepts blocked calls and gives the caller a recorded message that "this number does not accept blocked calls. Unblock your line and try again." With "blocked-call blocking", your phone never rings with an anonymous call... it's intercepted before it gets there. That's what I use and it works well.

> of numbers and letters and anybody would take that as a license and talk
> to you.

That's the fault of the salesperson, not Radio Shack.

ALL their amateur radio promotional material mentions the fact that a license is mandetory.

ALL the amateur radio packages mention the necessity of a license.

The training materials that all employees are required to read and the weenie test on those materials cover the licensing requirement.

Radio Shack's VP of marketing is an active ham. He used to be in charge of the communications line. The fellow that replaced him in that capacity is also an active ham.

The problem you saw there is a common problem wherever you have sales persons.

New car salesman: "This truck will easily handle a 36 foot trailer."

Watercraft salesman: "...we even include a fire extinguisher so you'll have all the safety equipment the coast guard requires".

Home improvement salesman: "We'll take care of all the permits and follow all the building codes."

Equipment rental person: "Sure, anyone can run a trencher. You just turn this key to start and pull back on this lever to go."

Hardware store help: "Of course you can use this paint in a basement. You can use ANY of our paints in a basement."

Gardening supply salesperson: "You need to use a face mask with that bug spray. Any kind will do."

OKAY, okay.... I know I tend to get carried away...

Thanks to all for the advice on the cars. Yeh, i realize that when driving a 1994 Mustang you might as well paint a sign on it saying "Pull me over" My main concern is the fact that he couldnt prove to me that I was speeding by not showing me the radar. The other constraints i forgot to mention in the original post was the fact that i was coming round a corner, he was coming the oposite way and there was a hill between us, he only had me for a second or two. This is a small town area. I had the idea that he was required to show you the radar, it must be different in different states but this sure is gonna be a hit to the wallet.

Tnx for the Web sites

Come on, fellows; stop pulling this guy's leg. Everyone knows that funding for 10 meters was dropped from the FCC's budget about 3 years ago. We should all write our congress-people to lobby for reinstatement of the funding. If past legislative efforts are any indication, we can probably get 10 meters restored in about 3-4 years.

Additionaly, most phone services offer a "call-back" feature. Some charge
on a per-use basis, however this feature will call back the last person
ringing your home, regardless of whether its anonymous or not.

I built one for my father to use when he skiis in the Birkebeiner
race in Edmonton. It worked well but he didn't appreciate the wires up
his sleeve when he tried to change clothes. He had a ptt on the top of
his ski pole and he did look strange talking to himself in the parking
lot. The circuit was just an opamp audio amp and a mail order earpeice
that was offered in QST about three years ago.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 06 NOVEMBER AND FORECAST FOR 07 NOVEMBER - 09 NOVEMBER

1A. SOLAR SUMMARY
Activity: NA

Flares: NA

Observed 10.7 cm flux/Equivalent Sunspot Number : NA

GOES satellite data for 05 Nov
Daily Proton Fluence >1 MeV: 5.8E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 8.3E+06 (normal)
X-ray background: A2.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Nov 08 Nov 09 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Nov: NA

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: no data

Estimated Indices : A K Observed A Index 05 Nov
Learmonth -- ---- ----
Fredericksburg NA NA
Planetary NA NA

Observed Kp for 05 Nov: 3212 3323
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
07 Nov 10 Quiet to unsettled
08 Nov 20 Active
09 Nov 13 Unsettled
COMMENT: IPS Geomagnetic Warning 28 was issued on 6 November and is
current for interval 8 November.

1702. Re: How to fix intermod?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-06 00:00:00 UTC
From: k5qq@aol.com
Message-ID: <47m7hm$8hf@newsbf02.news.aol.com>
Source record: 235910
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

You might notice if it always sounds like a pager or some other such tone is one of the intermod signals. Your HT will be more suceptible (sp?) than other radios as they are usually run with a much higher gain in order to hear signals with their small antennas. When you hook them to the outside antenna is when you run into problems..

In Albuquerque we have some paging transmitters in the 152 MHZ band that are running over 1000 watts and they cause a lot of trouble for lots of folks. I just bought a PAR electronics filter which is a notch filter and it works GREAT!!

Might check them out in QST and if your intermod is from pagers, I know that will fix a lot of your problems.

Adios
Jim

>Eric.
I don't remember the years, but the ARRL handbook published a
transmitter they called the Cubic Incher, I would guess about the 1985
timeframe. It was a cubic inch in size, and I beleive 1 watt output.

Also a very simple single conversion receiver can also be constructed
using a crystal for the LO, greatly simplifying the circuit. I beleive
a Popular electronics about 5 years ago had the schematics for this.

Sorry I can't be more specific, I made a great sacrifice, We have a
foreign exchange student from Paraguay and ALL of my reference material
is stored for the year along with most of my test gear.

>
>Any advice and/or experience? (Gary maybe?)

As far as I know, storage at 0F shouldn't cause any damage. NiCads are rated for storage down to -55C. Of course available capacity will be virtually nil until the battery warms back up. Skiers often keep their HTs inside their parkas for this reason. It's not to prevent damage from the cold, just to keep the chemicals active enough to produce power on demand.

One *good* effect of storing the NiCads at low temperature is that because the chemical activity is low, self-discharge is reduced and the batteries will hold their charge longer between rechargings. You should still top the charge off at least once a month if you aren't regularly using the radio but want it to be ready for use. (Of course, unlike lead acid batteries, it's perfectly safe to store NiCads in a completely discharged condition, so you don't have to top the charge off unless you want the radio at full capacity on a moment's notice.)

One more caveat, *don't* attempt to recharge a cold battery. Allow it to warm to room temperature before charging. Attempting to charge a cold battery will cause localized heating in the battery and will promote dendrite growth which can short the battery.

Caller ID can be blocked. The solution is simple, don't answer any
call that doesn't display a caller ID, let the answering machine
handle it.

>technically oriented] but taking them at an FCC office definitely raised the
>anxiety level, especially if one had to drive as much as 150 miles, as the
>regs were then.

The exam may have seemed harder then, but remember that to a fifth
grader, fifth grade level exams seem hard too. Hopefully, you know
a lot more now than you did then, so those exams *should* seem easy
to you now, just like fifth grade exams seem easy to a high school
student. You can't really trust your memory on this. Go back and
look at a 1968 study guide. I did recently. The material really
wasn't that hard after all. Compared side by side with today's
exam pool, I'd have to say the older exam was easier. Much of this
talk about the older exams being harder is colored by memory
of days when you knew less.

Now it's true that the Advanced exam introduces more technical
concepts than the Extra, and requires a bit more knowledge to
navigate. For many of the questions on the Extra, memorization
is required since they are regulatory in nature rather than
amenable to being derived from first principles. To me, memorization
is more work than simply understanding principles, but your
mileage may vary.

>Internet: chris.smart@canrem.com Fido: 1:229/15

Chris,

Here in Columbus, Ohio, 2 meters is very crowded. There are no more 2 meter frequencies available for 2 meter repeaters. On 440, however, there are several repeaters but none are very active. They are nice to get on and chat without worrying about someone else needing the repeater.

440 is different in that it is a much higher frequency. Therefore, the antennas are smaller. The wavelengths go through walls much easier; 440 is ideal for inside use. On the other hand, DX is usually rare. Occasionaly I have heard a repeater in Ft. Wayne, Indiana but was unable to reach it with 5 watts. I'm sure if I had 45W I'd do a lot better.

So if you're looking to escape from the activity on 2 meters, give 440 a try. It's less active and there is much less intermod.

To all radio amateurs

SB SPCL ARL ARLX067
ARLX067 Sound on TAPR Home Page

Tucson Amateur Packet Radio Inc (TAPR) has added an audio ''virtual meeting, workshop, and seminar page'' to its Home Page on the Internet, according to TAPR President Greg Jones, WD5IVD.

The address is http://www.tapr.org/

TAPR is evaluating a ''RealAudio'' system to present packet radio meetings and presentations. The system only allows six concurrent connections, so if you find that an audio channel is busy, try later, Jones said.

The new audio selections include:

The March 1995 TAPR annual meeting in St Louis, with a TAPR/AMSAT workshop and a seminar on error control coding by Phil Karn, KA9Q;

A national meeting of repeater frequency coordinators on October 7, 1995, near St. Louis, including talks by Ralph Haller, deputy chief of the FCC Wireless Telecommunications Bureau, and ARRL President Rod Stafford, KB6ZV; and

An interview with TAPR President Jones on the syndicated radio program ''Ham Radio and More,'' August 13th, 1995.

The TAPR Home Page also contains a primer on amateur packet radio and other packet-related material.

220V wiring uses 2 circuit breakers to supply 2 110V lines to a 220V receptacle.One common line also
runs fron the breaker box to the receptacle.Do not use standard 110v receptacles.You want a receptacle
rated for 220v use that there is no way one could accidentally plug a common household plug into!Check
your local code for correct installation,wiring and grounding guidelines.Use properly sized breakers.Use
correct size wire to avoid overheating and voltage drops (if long runs are involved) Again: consult your
local / state electrical code. 73 KE6LZS

Hi,

I recently bought an ICOM 2000 and didn't like a couple things
about the mic, so I made some mods to make it work the way *I*
want.

1) Its hard to hold the PTT and press the buttons on the keypad
when accessing the autopatch so I added a 2nd slide switch PTT.

2) I can't see the keypad at night so I added a 'super bright'
LED just below the keypad.

More info about what I did can be found at

http://polaron.physics.colostate.edu/~fiz/icom2000.html

Uh huh, and in response to your post you are basing everything on a few
Radio Shacks that you are familiar with. Tandy Corp.is ultimately responsible
for the actions of their employees. Period. True, the salesman behind the
counter wants to make a sale (do they work on commision?), but Tandy pays
that guy and while that guy is working behind that counter Tandy is
responsible for what that salesman says and does. The only way Tandy is
going do something about it is if someone repeater trustee catches an
unlicensed operator using equipment with the RS label. I dare say that
if that happens AND the guy who gets caught admits that the salesperson
told him that he didn't need a license, that Tandy could have a nice
lawsuit to contend with. That's a lot of ifs, but should this scenario
come true, I for one will not feel sorry for Tandy/Radio Shack.
representative of Tandy while he is working.

>P.S. It's unlawfull to require an amateur radio license for the purchase
>of amateur gear, however illogical that seems.

This is true, but salesmen giving false information is also unlawful as well.
The whole point is not if salespeople represent the majority, but the fact
that individuals ARE giving false info out of ignorance or intentionally.

I too have had mixed reviews about the sales people at RS. One guy didn't
know a license was required. Another knew and wanted to sell me a bunch
of code tapes and books along with the radio.

1722. The log of wireless station 9CU Edwin Watkins

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-06 00:00:00 UTC
From: tonyz@rose.hp.com
Message-ID: <47m45j$ghi@rosenews.rose.hp.com>
Source record: 235930

Hello,

During a foray in Old Sacramento's antique shops, I found a package of
materials from one Edwin Shore Watkins, wireless operator 9CU, Chicago Ill.

Apparently Watkins kept some of his old momentos including 2 ARRL memberships
dated 1920 and 1921 with Hiram Percy Maxim's handwritten signatures on them.

Also I have his his license to Radio Operator, Amateur First Grade
dated May 26, 1916 when Mr. Watkins was 18 years old. Another, a license
to Radio Operator, Commercial Second Grade. Both were issued by the
Department of Commerce, Bureau of Navigation dated May 6, 1921.

There are some old photographs, a couple of which show Edwin Watkins,
9CU operating his spark-gap transmitter and silicon detector receiver.

His friend Allyn Temple, call sign unknown, is shown at the station
pounding brass. These pictures are dated 1913. The back of the photo
indicates Watkins had this station set up in his parents garage,
and he was using a 1/4 kw transformer inductive receiving system with
silicon detector, straight gap.

The logbook is manufactured by Wm. J. Murdock Co. and in the back
there are advertisements for various spark-gap generators, detectors
and the like.

In front of the logbook there are "Gentle Hints for Amateur Operators"
and one bit of advise is as follows:

"Give the other fellow a chance. Tuning
is not yet so perfect that six fellows
in the same city block can work on 200
meters without interference. Take your
whack at it, but don't think that your
license gives you a monopoly of the
ether when YOU want to use it."

This logbook is very old and the pages have to be carefully
turned in order not to crumble the pages.

Here are some highlights from the log of 9CU. Some of
the entries are from other operators, and it seems Watkins
was called to duty in the Great War, serving as a Lt., as
there are photographs of he and his officer buddies in snowy
Europe. There are no indications of where or what year. The
log stops in Dec. 1916...either due to the government shutting
down all stations for the duration of the Great War or Watkins

had left for Europe with the Expeditionary Forces.

One interesting item to note is Watkins' reference to having ordered one of Lee DeForest's new Audion but no other reference to sets utilizing tubes appears other than a request to keep the filament voltage down.

Sept 2, 1914 8.50 PM (Watkins is 16 years old)

Am trying out the new buzzer test I got from Nichols Elec. Co. and it seems to work well.

9.45 PM Buzzer is OK because I tested detector with it. It tested fine and now i am receiving messages with same adjustment. Somebody calling WGO, later answers but I cannot get call letters of 1st party. 1st party continues as follows:
Grahame-White heads English Aero Corps (kind of faint) officially learned today Claude Grahame-White, has been appointed temporary aero commander- British aviation corps.
He sends his call letters too fast- cannot read them. This was in the morse code, and a wave length of about 600 metres. Spark has a very high and musical pitch.

Conditions: Quite a bit of induction and some static but very little. Otherwise condisions were pretty good.
Time finished: 10.15 PM Operator: Watkins

(The Great War had just broken out in August 1914 but US forces would not be involved for some time yet)

Sept 3, 1914
Time: 7 bells There is so many hams working I'm afraid to start copying them. Most in continental code. Not much doing after 8.30 PM. Receiver's (I re-wound over) phones very sensitive.

Sept 12, 1914

(Here young Watkins talks about his friend Robert Laidlaw who lived at 5217 Glenwood Ave, Chicago and who was licensed 9PR. Watkins also hand draws his station showing a simple schematic of the spark gap generator and his detector system.)

8.00 PM Worked Laidlaw with ease- using straight gap, and oscillation transformer. Connections as follows, also got Arlington fairly loud with following hookup using loader.

conditions: good- some static, no induction.
time finished: 10.00 PM Operator: Watkins

NOTE: the log is full of references "Punks" who were apparently unlicensed Ner-do-Wells and press reports as well as NAA weather reports and some

stock reports. The same wavelengths were shared
with different services as there was no way to
efficiently tune out interference from other stations
nearby on a particular wavelenth.

Jan 27, 1915 6.00 pm

Got CB and WH loud on 200 metres
NP calling NS 200 metres Lay phones on table and hear him.
9HF calling CH 200 m. loud. DF calling OF 200 m.
WGO - 200 m. real loud. Could hardly hear NAA, too faint
to read. Got a 'freak' message tonight. Dont know if
it was due to atmospheric conditions or to the station
that emitted the wave. The message strengthened and
weakened alternately at uneven intervals as per diagram.
(Watkins drew what appear to be some sort of modulation
occurring- unknown what it was he was hearing)

conditions: Pretty good, no static and little induction from
"110" (a reference to the input ac voltage to the spark gap
generator) but the atmosphere isnt as good as last night.
time finished: 10.00 PM Operator: E.S. Watkins

June 17, 1915
Time: 8.59 PM
Heard WGO working quite a few boats tonite. Quite a few
things have happened since last entry (Jan 28) WDU has new
quenched set. Grand Haven has new quenched set and WGO has
synchronous (unknown scribble). Sounds like NAA. Almost
all lake (Great Lakes, presummably) excursion boats have
started now, heard WFA, WDO, WDS, ...WFO (not assigned when
copy of "radio staions" was published). also heard NAK once.
The static is awful on some nites now; so bad that hardly
any receiving can be done. The strength of NAA is also
gradually decreasing. Just heard PW trying to work 9IC but
he got no answers. Just heard WGO working WME who has
a rotary now. Weather report predicts rain for tomorrow.
Conditions: Quite a bit of static. Good sign of rain
tomorrow. Time finished: 10.20 PM. Operator: E.Shore Watkins

July 24, 1915 8.55
JR from WEO, also heard following at different intervals of
morning: WDU, WDV, (etc)
Unusual occurrence:
WGO de WFC- message etc. Mrs.--- 629 West 135th st. New York,
NY: wish you many happy returns of the day, Mr. ---, on board
'Virginia'.
Eastlans (some confusion here, possibly Eastlang..TZ) capsized
in the river today. WGC reports 300 drowned at 9.30 AM It happened
at 7.30 AM. Boat was overloaded and all were on one side and when
ropes were let loose it fell over onto its side in the river
at South and Clark St. Bridge, great panic. The reason of the

big load was that Western Electric Co. was having a picnic and boat was making a special trip to Michigan City. They had 5 boats chartered for this special trip and Eastlang was one of them. George Dibble was operator at time. (Apparently there were so few licenced Amateurs at this time that operators knew who each other were- TZ) Likely he went down with the boat.

The rest of the text is gone, long since rotted away.

There are quite a few more pages of logs, but I'm almost afraid to turn them, they are so brittle.

Here's one more interesting page:

Oct 16, 1915

Came home from John Johnsons house and one of the most terrible sights that I ever witnessed lay before me as I entered my station. The complete station demolished. (The works of one of the meanest and most cowardly devils on earth. I am ashamed to say- my brother) and strewn all over the floor. The neat sign that decorated the ceiling, torn from its place and smashed to pieces, wires laying in a tangle to one side, rotary absolutely banished. As I write this I am in an awful state of mind, one of primitive mood: I feel, on the impulse of the moment like going downstairs and choking him. "God be with me and help me to fogive him" He is probably sorry for what he has done. "God help him" I lay thinking almost all night. Watkins.

Dec. 1915
Time: about 7.45 PM
Have had set working on low power for abt 2 weeks. Condenser not large enough, as yet, to use full power. Got 2 good ammeters now. DX comes in fairly well. Have ordered an audion but same hasnt arrived as yet.
8.15 9IK - 9VK 200 metres , later faint.
9UT - 9AS 200 m. fair.

Jan 4, 1916

Important msg. to be saved.

WB de WGO- I'm going to report you for operating an unlicensed set and sending on five hundred metres and report 9IC from working you.
WB de WGO,

Notice for all 'hams'

The rest of the log is full of stations worked and entries by other operators. Watkins possibly took his station and logbook with him while in the US Army, as there is one entry referring to a Sgt Harrison and requesting him to turn the filament voltage down while operating the station.

Watkins came home from the Great War and was honored by what appears to be an early form of the Veterans of Foreign Wars. There is an undated newspaper clipping from Los Angeles where Watkins apparently settled. "Honor is conferred upon Monterey Park Veteran of World War by naming local organization Lieut. Edwin S. Watkins Unit. All Veterans are invited to Big Meeting to be held tonight at 8 O'clock in Weaver Auditorium.

I also have a picture of Watkins as a small child, and another dated 1961 of what could be grandchildren at Christmas morning.

On the off chance that one of you out there that knew this one who pioneered our hobby or his family in the Los Angeles area, please e-mail me. They may want these things and may consider them precious.

I dont know how they came into the hands of "Archives and Artifacts" in Sacramento, but if he was my Grandfather, I'd be pretty proud of him.

Tony WB6TRU Wireless Operator and keeper of old radio stuff.

"What good is it?"
-It's coming from out there.
"Out where?"
-Space.
"Just Space?"
"You have spent thousands of dollars on transistors...and...and...circuits and cathode ray...what good is it?"

-Well, it's..... interesting.
~cliff robertson, Galaxy Being, THE OUTER LIMITS

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(27 OCTOBER - 02 NOVEMBER)

ISSUED 03 NOVEMBER 1995

SUMMARY
Date 27 28 29 30 31 01 02
10cm 74 74 74 73 73 74 73
A 6 2 3 11 16 22 (21 ESTIMATED)
T 21 11 23 18 -4 6 -3

SOLAR ACTIVITY VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 27TH TO 29TH
OCTOBER. THE FIELD INCREASED TO QUIET TO UNSETTLED ON 30TH TO
31ST WITH AN ACTIVE PERIOD 1200 TO 1800 UT ON 30TH. THERE WAS
A FURTHER INCREASE IN THE GEOMAGNETIC FIELD TO UNSETTLED TO
ACTIVE CONDITIONS ON 1ST TO 2ND NOVEMBER.,

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR
PREDICTED LEVELS 27TH AND 28TH, NEAR PREDICTED TO 20 PER CENT
ENHANCED ON 29TH. FREQUENCIES ON 30TH WERE NEAR PREDICTED
LEVELS WITH OCCASIONAL 30 PER CENT ENHANCEMENTS, REDUCING TO
NEAR PREDICTED LEVELS WITH SHORT DEPRESSED PERIODS TO 30 PER
CENT ON 31ST. FREQUENCIES WERE DEPRESSED TO 10 TO 30 PER CENT
DURING LOCAL DAY ON 1ST NOVEMBER, AND ALL SAY ON 2ND. SPORADIC

E AND SPREAD F WAS OBSERVED ON 29TH TO 31ST OCTOBER.

FORECAST (03 NOVEMBER - 09 NOVEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE UNTIL 05 NOVEMBER THEN QUIET
TO UNSETTLED FOR 06-07 NOVEMBER, RETURNING TO
UNSETTLED TO ACTIVE LEVELS 08 NOVEMBER.
UNSETTLED LEVELS EXPECTED 09 NOVEMBER.

IONOSPHERIC: DEGRADED/DEPRESSED 15 PER CENT FOR SOUTHERN
REGION AUSTRALIA UNTIL 03 NOVEMBER. DEGRADED
CONDITIONS POSSIBLE ON 09 NOVEMBER. NEAR
PREDICTED MONTHLY VALUES ON OTHER DAYS.

COURTESY OF IPS RADIO AND SPACE SERVICES

Notes of Interest:

SAO TOME & PRINCIPE, S9 - Five French hams will operate from Principe Island (AF-055) signing S92P from 21 Nov. to 6 Dec. They will be active on all bands including WARC, on CW/SSB and RTTY. QSL via F6KEQ.

MYANMAR, XY - A multinational team is operating a demonstration type station using the callsign XY1HT until 30 Oct. They have been worked on both CW and SSB, but have promised RTTY "later in the week". QSL to P.O. Box 1300, Bangkok 10112, Thailand.

JA3JA's Pacific Tour to V73, T30, and C21 13-30 Oct. had to be cancelled due to an arm injury.

NEED HELP QSL - Has anyone received a QSL card from the August 1994 CY9CWI expedition to St. Paul Island? Some QSL's sent to the manager, VE2CWI, have not yielded responses.

For next week's bulletin send your bandpass and notes of interest to Luciano, I5FLN at ZS5S.ZAF.AF

ARLD055 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, the OPDX Bulletin, Ron, DL4FDU, Jan, KX2A, Michael, KA2AEV, and Contest Corral from QST. Thanks to all.

MYANMAR, XY. XY1HT continues to be active. Ops include LA7JO, G3NOM and JA1UT. Several other JA ops are enroute to Yangoon. This is a multi-station, all band effort on CW, SSB and RTTY that was also active in the CQWW DX SSB Contest. Try 7045 kHz at 1400 and 1945z, 21249 kHz at 1345z and 14180 kHz at 1330z. QSL via PO Box 1300, Bangkok 10112 Thailand.

XZ1X and XZ1A is a two or three station effort by JA1BK, K5FUV, N7NG, OH2BH and OH0XX. For CW try 7005, 14005, and 21005 kHz. On SSB try 14195 and 21295 kHz. Additional frequencies might be authorized. QSL via JA1BK.

NORTHERN MARIANA ISLANDS, KH0. Listen for Multi/Multi KH0AM during the CQWW DX SSB Contest. The ops are KH0AM/JE1CKA, AH0K, JA1WSX/KI7QD, JH1GTV/N1SID, JR1EFG/KU0Q, JF1MIA/KH0A, JE2JCV/WH6CQ, KH0BA and JA6VZB/AH0T. Operating outside of contest hours will be limited. QSL via JE1CKA. QSL cards will be sent via the bureau to all stations in the log.

Another group will be active from Saipan November 3 to 6. Listen on 80 through 10 meters for KH0R by JE6DND, KH0CS by JA6PFR, WH0ABC by JR6OCL, KH0U by JA1QNV, KH0S by JA1OGX, KH2GR/KH0 by JF6BCC, AH0AV by JH6RTO, and WR1J/WH0 by JR2BEF. Activity will be 80-10 meters including the WARC bands. QSL WR1J via 7J2YAA. QSL all others via home calls.

NEPAL, 9N. JA2NQG will sign 9N1CT or 9N1NQ from Katmandu December 23 to 31, and will concentrate on 160 meters.

UNITED ARAB EMIRATES, A6. Steve, K7SP, was in the CQWW SSB Contest as A61AF. After the contest, he will operate mostly CW on 30 and 40 meters.

MALDIVES, 8Q. Andy, G4ZVJ, and Ken, G4RWD, will sign 8Q7VJ and 8Q7WD, respectively, November 21 to December 3. Activity will be CW only on 1827, 3503, 7003, 10107, 14027, 18077, 21027, 24897.

TAJIKISTAN, EY8. Karl, DL4YT and K4YT, and Ron, DL4FDU and NP2AQ, operate from EY8 November 6 to 13 as work schedules permit. Listen for EY8/K4YT and EY8/NP2AQ on 80 through 10 meter SSB and CW. QSL via K4YT, Karl Renz, PSC-115 (ESC), APO AE 09213 NP2AQ, or Ron Maples, PSC-115 (ESC), APO AE 09213, as appropriate.

DJIBOUTI, J2. Tom, J28ML, and other amateurs are planning a DXpedition to a small island that is part of Djibouti. The DXpedition will start December 8 and run until the 14th. Listen for J20RAD on 80 through 10 meters SSB, CW and RTTY. QSL via the Djibouti bureau, PO Box 1076, Djibouti.

ANTIGUA. Frankford Radio Club members will be in the CQWW SSB Contest as V26B. Outside contest hours listen for V26A by N3BNA, V26B by WT3Q, V26DX by N3ADL, V26E by AB2E, V26R by KA2AEV, V26T by K3MQH AND V26U by WA2UDT. V2 calls for KF3P, KR2J and NM2Y are unknown at press time. QSL V26A via WB3DNA, all others via home calls.

PACIFIC DXPEDITION CANCELLED. JA3JA cancelled his island hopping to V73, T30 and C21 due to an injury.

Silent key

Silent Key

Norm Skulander VK2JW died in Orange on Thursday night 2nd November aged 70 years, after a long illness.

Norm was the main founding member of the Orange and District Amateur Radio Club in 1956. He is survived by his wife Gloria, sons Peter and Max, daughters Helen and Robyn, and their families to whom we send our condolences.

The funeral will be at the Orange Crematorium at 11am tomorrow (Monday).

Vale Norm Skulander VK2JW.

Federal news

Federal news

Beacon & Repeater Technical Licence Specifications

The Spectrum Management Agenct (SMA) last month issued drafts to the WIA of the long-awaited Technical Licence Specifications (TLSs) for Amateur Beacons and Repeaters, asking for comments to be returned by the end of October.

However, as the period for comment was felt to be too short for adequate consideration by Divisional Technical Advisory Committees, so the WIA sought an extension of time. This has been granted, and final comments from the WIA will now be returned to the SMA by or before 24 November. The Divisional Technical Advisory have until 17 November to return comments to WIA Federal Technical Advisory Committee Chairman, John Martin VK3KWA.

This is the third round of draft TLSs for Amateur Beacons and Repeaters issued this year.

The existing regulations governing the establishment ans use of beacons and repeaters are generally felt to be unnecessarily re-strictive and in need of updating to reflect what can be achieved with modern technology, and to permit new applications and techniques to be developed by amateurs.

The WIA has already paid considerable attention to reform the regulations applying to Beacons and Repeaters in representations to the SMA on earlier drafts of the TLSs, seeking the lifting of restrictions for example, on the linking of repeaters. Action on these new drafts is the latest step in the reform process.

The new TLSs for Beacons and Repeaters are expected to come into effect by the New Year.

VK2 WICEN news

VK2 WICEN News

November is a quiet month for WICEN, so this would be a good time to review your equipment to be ready for that sudden activation.

Central Coast WICEN will have its regular meeting at Kariong this Friday, conducted by David VK2UDT. The Management Committee meets on Saturday, and Sydney South has a Committee meeting next Sunday. Those who took part in the Hawkesbury Classic Paddle can attend the dinner and presentation on Saturday 25th, the details of which appeared in your briefing notes, and those with an eye for advanced training may be interested in the Latrobe Emergency Services seminar, on the weekend of 25-26th November, with further details obtainable from Morton VK2DEX. Finally, the closing date for the WICEN newsletter is Thursday 30th November, to John Howard VK2AMH, the State Co-ordinator and newsletter sub-editor.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB. Please note that the VK2AAB system is no longer operating as a BBS.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Heard Is. DXpedition

Heard Island DXpedition 1995

This expedition previously advised to sail on the 1st Novemebr has been delayed due to shipping movements, it is now expected a later

departure will be negotiated.

This will allow further time for a VK operator to consider participation in this unique expedition. Length of time away from Australia is 7 weeks. Does Australia have an amateur wishing to become a member of the group that put Peter One, Easter Island, and Falklands Islands on the DX map in recent years?

Any VK operator interested should ring Neil VK6NE on 09 4099333 QTHR as soon as possible.

73 Neil

VI2SIGNALS DX Contest

Australia remembers VISignals DX Contest 1995

This "Au revoir" event on our Australia Remembers programme, is open to veteran and serving amateur radio signals operators to establish a living memorial, to those who strove to get the message " through".

It commences at 0600 Hrs, Greenwich Mean Time, 9 December 1995.

It extends for 24 hours to make best use of frequencies.

Rules are simple as follows:

1. Contact scoring points are: State 1, Country 2, International 3, Control VI2 Signals 5.

2. R/T or W/T may be used to encourage participation.

3. Logs should contain Call sign and name of HAM contacted, time, frequency, strength, name of unit served, comment and service recollection if possible. Include caller's name, address, Callsign.

4. Entry donation of $5 to VI2SIGNALS, helps to cover administration and for the return of certificates and newsletters by February.

5. Logs with the above to be sent to Dennis Batley QTH 76 Gordon Vale, Manly Vale, NSW, 2093, Australia, as soon as possible.

Already, Australia Remembers, three service newspapers, Wireless Institute of Australia have been notified.

WIA will broadcast the event Sunday mornings, three weeks before the event.

Already Royal Signals Society, HAMS from the three services in Australia and New Zealand, have offered constructive comments.

Dennis Batley, VK2ADO, works possibel sched. Wednesdays, after 2030 Hrs. EST, to provide event details.

Call Sign VI2SIGNALS is authorised by Government Spectrum management for 24 hours. Recollecyions will build an "unofficial history".

This contest pays tribute to Mr. Os. Mingay MBE, who as a member of WIA, set up a HAM station after WW1 and was involved in organising the first World Radio Conference, Sydney, 1937, to which Marconi was invited. A tree will be planted in his honour at Simpson Barracks., Macleod, on Tuesday 12 March 1996.

Some HAMS may like to join Royal Australian Signals Reunion, Wagga Wagga, 9-10 March, 1996.

In the Australian War Memorial, a message at Gallipoli to Naval wireless operators reads "Embarkation Completed". There were no casualties left ashore. At 24oo Hrs. conclude with Os. Mingay'sd last message "Mission Accomplished".

Wilbur Wright, Contest Secretary

Channel 31 Sydney

What happened to Channel 31 (Community TV)

The new community television station in Sydney, Channel 31, has not lost its licence. As the frequency of differences of opinion with the contractor resulting in his switching off of the transmitter rose, it reached a stage where the contract was unworkable and was therefore terminated.

An alternate transmitter of 1 kW output power into an antenna array with a maximum gain of 14.6 dBi and a minimum gain in a horizontal direction of 8.6 dBi is being installed at a site in Artarmon. The new antenna is also at least 12 metres higher than the old antenna. This would provide a better signal to most parts of Sydney.

If agreement is reached with all concerned, then this service could be on air again within a week. Otherwise it could be a little longer.

from Murray Peterson VK2KGM

News briefs

NEWS BRIEFS

US networking giant Novell has announced a joint venture with American power company UtiliCorp, to use power cables to carry data as well as standard AC. Novell says that the lines could be used to allow domestic users access to Internet, use fax machines, and remotely control their home appliances.

If you'd like to use electronic mail, but you don't have a computer and a modem, you might be interested in a new service, soon to be introduced in the United States. Compuserve is planning

to offer subscribers an email-to-fax conversion service. Soon you will be able to receive your email on your fax machine. If you don't have a fax, then you'll have to wait for the "Calling All Card" service, which will convert your email to voice mail.

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(27 OCTOBER - 02 NOVEMBER)

ISSUED 03 NOVEMBER 1995

SUMMARY

Date 27 28 29 30 31 01 02
10cm 74 74 74 73 73 74 73
A 6 2 3 11 16 22 (21 ESTIMATED)
T 21 11 23 18 -4 6 -3

SOLAR ACTIVITY VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 27TH TO 29TH OCTOBER. THE FIELD INCREASED TO QUIET TO UNSETTLED ON 30TH TO 31ST WITH AN ACTIVE PERIOD 1200 TO 1800 UT ON 30TH. THERE WAS A FURTHER INCREASE IN THE GEOMAGNETIC FIELD TO UNSETTLED TO ACTIVE CONDITIONS ON 1ST TO 2ND NOVEMBER.,

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PREDICTED LEVELS 27TH AND 28TH, NEAR PREDICTED TO 20 PER CENT ENHANCED ON 29TH. FREQUENCIES ON 30TH WERE NEAR PREDICTED LEVELS WITH OCCASIONAL 30 PER CENT ENHANCEMENTS, REDUCING TO NEAR PREDICTED LEVELS WITH SHORT DEPRESSED PERIODS TO 30 PER CENT ON 31ST. FREQUENCIES WERE DEPRESSED TO 10 TO 30 PER CENT DURING LOCAL DAY ON 1ST NOVEMBER, AND ALL SAY ON 2ND. SPORADIC E AND SPREAD F WAS OBSERVED ON 29TH TO 31ST OCTOBER.

FORECAST (03 NOVEMBER - 09 NOVEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: UNSETTLED TO ACTIVE UNTIL 05 NOVEMBER THEN QUIET TO UNSETTLED FOR 06-07 NOVEMBER, RETURNING TO UNSETTLED TO ACTIVE LEVELS 08 NOVEMBER. UNSETTLED LEVELS EX-PECTED 09 NOVEMBER.

IONOSPHERIC: DEGRADED/DEPRESSED 15 PER CENT FOR SOUTHERN REGION AUSTRALIA UNTIL 03 NOVEMBER. DEGRADED CONDITIONS POSSIBLE ON 09 NOVEMBER. NEAR PREDICTED MONTHLY VALUES ON OTHER DAYS.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Liverpool

LIVERPOOL AND DISTRICTS AMATEUR RADIO CLUB.

The next Liverpool Club AUCTION will be held on Saturday the 18th of November commencing at 12 Noon.

Doors will open to Sellers for equipment registration at 10:30am and to buyers and browsers at 11:30am.

The venue as usual will be the hall at the Glenfield Scout Camp in Cambridge Avenue at Glenfield, just off Moorebank Rd.

See you on Saturday the 18th.

--Brad. VK2QQ Publicity Officer.

Club news: Waverley

WAVERLEY AMATEUR RADIO SOCIETY

A reminder that the next meeting of the Waverley Amateur Radio Society will be HELD on Wednesday, 15th November. A topic for the evening has yet to be announced, but come along anyway for a ragchew. The venue is the society's premises in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. club where a number of members gather for pre-meeting refreshments. Starting time is 7:30 pm, with doors opening at 7 p.m. Members and anyone interested in amateur radio are invited to come along.

Don't forget that the society holds its weekly net at 7:30 pm every Tuesday using the Paddington 2 metre repeater on 147.025 MHz.

All are welcome to join in.

--Simon Buxton - VK2EII - Publicity Officer

Club news: Radio Veterans

Radio Veterans Group

This November meeting of the Group on 16th November will be the last for this year. The first meeting in the New year will be on Thursday 15th February 1996. Members of the group wish listeners of this Broadcast a Merry Christmas and a Happy and Prosperous New Year.

A Franklyn Pain VK2DYP

Club news: Parkes

From the Parkes and Districts Amateur Radio Club comes the news that they will be holding a Western Area Meeting or W.A.M. '95 on

Saturday the second of December. This will be a chance for all Hams in the Central West and beyond to get together for a day of very interesting lectures and talks followed by the widely renowned Christmas party at John Meagh, VK2AMV's place.

So mark the second of December on your calendar for W.A.M. '95 at FORBES - the 1993 Tidiest Town in Australia.

Club news: AATC

Australian Amateur Television Club

The AATC will hold the next general meeting as usual on the 2nd Sunday of next month - note : at Chipping Norton - near Liverpool. More details next week.

The AATC wishes to thank all those who p[articipated in the JOTA weekend last - for the Boy Scouts and Girl Guides of Australia - thank you.

AATC Publicity Officer Bob Barnes

Club news: Illawarra

Illawarra ARS auction

The Illawarra Amateur Radio Society will be holding its Annual auction on Tuesday 14th of November commencing 7.30pm at thr SES Building Montague St North Wollongong.

submitted by Ken VK2KWG
Publicity Officer

Club news: ALARA

1995 Australian Ladies Amateur Radio Association Contest, Saturday 11 November 1995

The 1995 Australian Ladies Amateur Radio Association Contest is to be held on Saturday 11 November between 0001 and 2359 UTC.

This Phone and CW Contest is open to amateurs and SWLs throughout the world. In the contest, YLs can work anyone, whereas OMs and clubs can work YLs only. The bands are 80 metres through to 10 metres.

Full rules are in the October issue of AR; or contact Dot VK2DDB, QTHR. Phone 02 477 3243 or a packet message can be left for VK2DDB at VK2DAA.

YL novices entering the CW section are eligible for the Florence McKenzie CW trophy which is awarded to the highest scoring VK YL Novice.

from Dot VK2DDB, VK1/VK2 ALARA Representative

Club news: SPARC

The next meeting of the Sydney Progressive Amateur Radio Club
SPARC

will be held on Wednesday the 8th November at 7.30 pm at the club rooms. These are located at Middlemiss Street, Milson's Point, in the first arch below the railway line (the State Emergency Services headquarters for North Sydney) and immediately to the north of Lavender Street and the new roundabout.

The antenna modeling programs known as Elnec, Eznec and MN (based on Mininec) have allowed Radio Amateurs to create their own antenna systems with some confidence that results will resemble the intentions of the designer. These programs all derive from an enormous research program undertaken by the American Navy and a program developed to run on a Mainframe computer. Their operation is not difficult but it helps to be shown how to run them. They also have certain inherent limitations. Before you spend a lot of time using them, knowing what the pitfalls are is useful.

At the next meeting of SPARC, Alan Avery, VK2AXA and Peter Jensen, VK2AQJ, will demonstrate and discuss the use of these programs. John Innes, VK2AUI, may also be available to describe the use of Eznec for the design of major antenna installations.

Come along and see these inexpensive and useful programs in operation. This could be the answer to testing that pet antenna program that you have been thinking about for years.

As usual refreshments will be available and all are very welcome.

Peter R. Jensen
President

Club news: Fisher's Ghost

Fisher's Ghost Amateur Radio Club Inc.

The Club is celebrating Koshigaya Week during the month of November. Koshigaya is the Japan's sister City in Campbelltown, NSW. The Club will have active the Club';s Callsign VK2FFG suring this time & anyone who makes a contact with the club callsign will be able to claim for a Special Event award.

RULES
You must maske a contact with VK2FFG & any SWL's need only to hear a contact being made. If you like to work it using packet all you have to do is log onto VK2GDM's BBS & make a printout of the contact.

Cost of the award is $5.00 AUST.

NOTE:- ALL applications must be in by the end of January '96.

Please send all correspondence to :-

AMERICAN RADIO RELAY LEAGUE (ARRL) WEBMASTER

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are *essential* to its ongoing success, so please drop by and say hello!

REC.RADIO.AMATEUR.MISC FREQUENTLY ASKED QUESTIONS (FAQ)

Available from:

* http://www.smartpages.com/faqs/radio/ham-radio/faq/top.html
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/faq/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

Currently the posting of these articles have been suspended indefinitely (and will probably be removed from the above sites shortly). New editors are being actively sought to take over maintenance of the above resources and keep them from disappearing from the net permanently. As with any volunteer effort, new volunteers are often needed. We need new editors to post the above FAQ's. Preferably this should be someone who has enthusiasm for hobbyist radio, experience with Usenet, and the ability to work with the other editors. No single person can know all the various aspects of these diverse hobbies so the editorial review groups are intended to make a greater combination of experience. A new maintainer is desired at this time to provide a fresh outlook as well as the opportunity to train new volunteers and avoid overreliance on a small group of people.

The FAQ's were posted with the auto-faq software, which is written in Perl (see Paul Schleck's entry). So it would be a plus for volunteers to post the FAQ to have Perl installed on their system and be able to use "cron" or "at" so that postings can go unattended.

With widespread net acceptance and use of the World-Wide Web, it might be desirable to rewrite the FAQ as a minimal "pointer" article with URL links. Such a minimal FAQ would reduce maintenance burdens, ward off criticism of the document for being "too big," and could be maintained as Hypertext Markup Language (HTML) at a WWW site, then "dumped" to an ASCII file for posting to news (to cover users who don't use WWW, as well as to actually feed a couple of automated FTP, Gopher, and WWW sites. Such an approach is used for the Elmers list; see the companion posting to this file, "Amateur Radio: Elmers List Info and Administrivia" for more information).

Anyone who wants to make their contribution to the Net as a volunteer should contact the Elmers Directory maintainer at elmers-request@gonix.com.

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back to the 1920's. I will be happy to assist those needing copies of out-of-copyright information for specific makes and models of receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all types. Unfortunately I have not taken the time to catalog all this information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment, (and I have the information in my collection) I will research and copy it for you. Cost will vary depending on the time required to find the information and the amount of pages to be copied. I estimate 10 pages or less at $1.00 US/page including US postage. I will quote on larger manuals.

This is NOT my career or a business. Any requests must be prepaid or I will ship COD at additional postage costs.

Bruce Perens AB6YM

perens@hams.com

MAINTAINER OF LINUX FOR HAMS CDROM

What Is Linux for Hams?

Linux for Hams is a full-featured Linux system with special additions for Amateur Radio. The system includes all of the sophisticated software that one would expect on one of today's engineering workstations, along with software for packet radio communication, electronic design, printed-circuit manufacture, a database of FCC rules and license exams, a code-practice program, and other Amateur Radio applications.

The general-purpose software includes software for connecting to the Internet, compilers for the C and C++ languages, a full-featured typesetting system, a symbolic mathematics program, CDROM authoring tools, and many other programs. Unlike other Amateur Radio software collections, Linux for Hams is an integrated system. The programs are already compiled and configured to work together with the rest of the system.

Linux for Hams is being built by Bruce Perens AB6YM, with the help of several volunteers. Of course, it builds on the work of the thousands of volunteers who helped create Linux and the other programs it contains.

The system will be available for free if you download it using FTP. A low-cost CD will be available, for about $30 US.

FREE CDROM SUBSCRIPTION FOR VOLUNTEERS

Most of the software in Linux for Hams is free software, contributed by its author for anyone to use. I would like to compensate those authors for their work. If you are the author of a significant piece of software included in Linux for Hams, please E-mail to Perens@Rahul.net. You may be be able to get a free CDROM subscription to Linux for Hams.

Bruce Perens AB6YM reserves the right to decide who gets free subscriptions, what is included in a free subscription, and for how long those subscriptions last.

For more information about Linux for Hams, check out the WWW page:

http://www.hams.com/perens/LinuxForHams

or send E-mail with the word "help" to:

PHD CANDIDATE IN ADULT AND HIGHER EDUCATION

EDUCATIONAL ADVISOR, AMERICAN RADIO RELAY LEAGUE

I am primarily an adult educator conducting research in self-directed learning. I have been involved in the following activities:

* Teach licensing classes, since 1974.
* Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy Club, Lawton Astronomy Club.
* Public speaking and publish on growth in volunteer organizations, marketing adult and higher education and teaching amateur radio courses.
* Research in adult learning theory, adult motivation and organizational theory.
* Conducted a SAREX activity that involve seven communities, 21 schools and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

AMSAT-NA LIFE MEMBER #2109

I am the AMSAT coordinator for the Portland, Oregon area and I do a lot of the "Elmering" in this area as well as steering people toward others.

This would be for satellites only, as I am not doing HF anymore.

I am currently set up for all of the digital and analog satellites, all modes including AO-13 Mode S and weather sats.

I would be happy to assist people with getting started and beyond in all areas of satellite operations.

Henry Ruh KB9FO

atvq@aol.com

AMATEUR TELEVISION QUARTERLY (ATVQ) MAGAZINE

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can try to answer questions on here, and frequently do, but time is expensive and limited!

Bob Salnick WA9BVE

Bob Salnick, Spokane,WA | UUCP: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Internet Services (Finding FAQ's, using Usenet, FTP, telnet, Archie,
FTP mail-servers, mailing lists, etc., etc.)

Club Activities, Examinations, and other events in the Omaha/
Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone
interested in customizing their presentation of the rec.radio.*
newsgroups

I would be particularly interested in mentoring/training new FAQ/Info
maintainers for the rec.radio.* newsgroups (see also Jack Hill and Joe
Nobody for FAQ maintenance opportunities and the rec.radio.amateur.*
Working Group mailing list). To paraphrase Zack Lau, I can't post it
all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.2pl1, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message body. An acknowledgement message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

ftp://ftp.ucsd.edu/hamradio/packet/arrlcnc/1990/

I'm certainly willing to be an Elmer if there's a need. I hope I've learned a few things since 1966 when I first went on the air. :-) Here's a list of subjects I might be able to help with:

* Combining amateur radio and flying
* Antennas
* Civil Air Patrol

* General Operating Practices
* Older (Tube) Equipment
* Test Equipment and Measurements

Dave Stine WA2JTA/6

dstine@cisco.com

My areas of expertise are:

* vacuum tube amps, receivers, exciters
* CW operating tips
* wire antenna tips, hints & kinks

David Stockton GM4ZNX

dstock@hpsqf.sqf.hp.com

* SWL since 1960
* Licensed since 1984 (UK full class A)
* Degrees in electronics&comms and digital techniques etc.
* Currently senior design engineer doing RF design

* Fairly broad interest in amateur radio (but not contests!)

* Antennas, Transmission lines,filters from fundamental theory to
practice
* Receiver structures and circuits from simple to state of the art.
* Transmitters, ATUs
* Test equipment
* Wide experience of troubleshooting/repairing equipment.
* Professional experience of EMC/RFI
* QRP
* UK Operation and Licensing

* My morse is flaky, but I keep working on it
* No interest in contests
* No interest in packet radio or in fixing computers

Just wrote the new oscillator and synthesiser chapter for the 1995
ARRL Handbook. Also co-developed (with G3ROO) a robust phase-locked
summing loop circuit to replace the common mixer-filter LO frequency
adder. A technical article describing the project was recently
published in RADCOM.

ARRL TECHNICAL INFORMATION SERVICE COORDINATOR (TIS@ARRL.ORG)

ARRL E-MAIL INFORMATION SERVER SYSOP (INFO@ARRL.ORG)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available

locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many amateur radio informational documents are also available from the ARRL E-Mail Information Server (or Info-Server for short). To find out how to use the Info-Server, send E-mail to info@arrl.org with any subject (it is ignored) and the following text in the body of the message:

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when the baby is asleep, so the XYL demands silent running. Besides, with my wimpy wire, there is little point in trying to run voice.

Charles R. (Chip) Veres WB4OQN

Jim Walsh W7LVN

jwalsh@efn.org

Quarter Century Wireless Association, Inc. (QCWA), headquartered in Eugene, OR, is pleased to announce the QCWA World-Wide Web Home Page, available by either text or graphics browser at:

http://www.efn.org/~qcwa/

Membership in QCWA, a not-for-profit 501(c)(3) corporation, is open to any radio amateur licensed today AND also licensed 25 years or more ago (there is NO REQUIREMENT for continuous licensing over this time period -- if you received your first ham license on or before January 1, 1970, you're now eligible). Included on the Web page are:

* Photos, biographies, addresses and phone numbers of QCWA 1995-1996 Officers and Directors
* Database of local Chapters (nearly 200, worldwide), including name, address, and callsign of Chapter Secretary
* Listing of on-the-air Chapter meetings
* Details of upcoming National Convention -- with photos, as soon as we receive them
* A few words about the quarterly QCWA Journal (we hope soon to have excerpts from Editor Barry Wiseman's new, improved Journal available to you on the Web)
* Rules and schedule for QCWA Phone and CW QSO Parties
* QCWA Memorial Scholarship Program
* Criteria for and recent winners of QCWA Awards
* A Photo Tour of QCWA Headquarters and W2MM/7 memorial station (soon to display a spiffy new IC-738 . . . THANK YOU, ICOM!)
* Links to other interesting ham-related Web sites

Please visit QCWA on the Web . . . and take a moment to E-mail me with your comments, corrections, and suggestions at my E-mail address above. If you administer a ham-related Web site, QCWA would appreciate a Link from your page. We're 12,000-strong -- worldwide -- and growing! Come join us!

QUARTER CENTURY WIRELESS ASSOCIATION

(see also Jim Walsh)

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/amsat/AmsatHome.html

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT NEWS SERVICE

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your

local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT BULLETIN BOARD

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - KEPLERIAN ELEMENTS MAILING LIST

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA RELATED INFORMATION MAILING LIST

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - SHUTTLE AMATEUR RADIO EXPERIMENT MAILING LIST

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be

processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

http://www.acs.ncsu.edu/scripts/HamRadio/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipgsun.mipg.upenn.edu/pub/yee/uploads/

or via E-mail to yee@mipg.upenn.edu

The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

- Z -

-----BEGIN PGP SIGNED MESSAGE-----

AMATEUR RADIO: ELMERS LIST INFO AND ADMINISTRIVIA

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via the Internet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII. The URL format is easily

mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and

years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages or FTP archives, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@gonix.com, the default Reply-To: of this message). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not necessarily get reviewed for some time (although all E-mail sent to me is certainly read with interest *eventually*).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource

Directory [*-*]," and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

+ news:rec.radio.amateur.misc
+ news.rec.radio.info
+ news:rec.answers
+ news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

+ ftp://ftp.cs.buffalo.edu/pub/ham-radio/
+ ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
+ ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail
within 24 hours (the mail-server uses batch priority to reduce
system demand).

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites:

+ gopher://jupiter.sun.csd.unb.ca/
+ gopher://gopher.univ-lyon1.fr/
+ gopher://ftp.win.tue.nl/
+ gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be
available from the following WWW sites:

+ http://www.gonix.com/pschleck/elmers/
+
http://www.smartpages.com/faqs/radio/ham-radio/elmers/top.html
+
http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.mi
sc.html

The advantage of reading the Elmers list at these sites via WWW
client software is that all URL's are converted to hypertext
links.

see also the newsgroups under comp.infosystems.www.* (I haven't
listed URL's for all of the newsgroups under this hierarchy as
there are now about a dozen of them (!!!).)

How may I contribute to the Elmers List?

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

JOINT AMPR.ORG IP COORDINATOR FOR OHIO SUBNET (44.070.XXX.XXX)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@ag9v.ampr.org

which is a mailing list read by a team of coordinators.

(see also Tony Schliesser)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

MAINTAINER OF STANDARDIZED INFO SHEETS ON QRP RIGS

They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

OWNER OF QRP-L MAILING LIST

The QRP mailing list is open for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building, etc.

This list was started by me with an announcement on the rec.radio.amateur.misc USENET group in early 1993. Bruce Walker, WT1M, maintained the mailing lists and FTP area from then through August 1994 on a system at Thinking Machines Inc., think.com. Then it was moved to qrp-l@netcom.com until May 14th, 1995. Thanks to Mike Ardai, N1IST, for all his hard work during the time that QRP-L was on netcom.com.

I am still the keeper of the non-electronic archives, including copies of some schematics, etc. Contact me directly or watch this list for more info.

To subscribe, send E-mail to:

listserv@lehigh.edu

and in the body of the message, write:

SUBSCRIBE QRP-L your_name your_call

where "your_name" is your real name, and "your_call" is your callsign, if any. For example:

SUBSCRIBE QRP-L John Doe K5FJZ

A welcome message with more detailed help will follow shortly.

To unsubscribe, type:

UNSUBSCRIBE QRP-L

Edward Addy KE0EG

eaddy@nacec.org

EXECUTIVE DIRECTOR, NORTH AMERICAN CENTER FOR EMERGENCY COMMUNICATIONS

After a large disaster strikes your community and your family, I am sure you will agree that its a little late to start building a massive rapid response, emergency communications system supported by thousands of people within companies, organizations and serving as volunteers to provide essential support services.

We are the North American Center For Emergency Communications Inc. (NACEC), a federally-registered non-profit organization serving North America since 1992. We have been developing a system that merges many different technologies to create a unique, high-capacity, rapidly-deployable solution to the problem of communications outages and shortages that occur following a large disaster. Our volunteer network in using the Internet as its communications backbone, is itself using one of the many technologies employed in NACEC's overall solution.

To help ensure the greatest possible effectiveness in as many communities as possible throughout North America, we are developing a very large volunteer network of community volunteers (Community Ambassadors) who work with our staff and their local communities. If you are community active and are interested in helping, we need your help, NOW. Please, don't wait until disaster strikes, help us to be prepared and be ready to assist your community.

The more communities that are represented by our volunteer network, the more effective we can be in disaster preparedness, emergency operations and in the area of emergency and military family message handling and delivery.

As a NACEC volunteer (Community Ambassador) you will assist with the movement of information that is vital to the continued success and growth of this organization and the survivability of your family and your community following a large disaster.

This project is growing rapidly, as we locate and add new dedicated volunteers from as many communities as possible from across North America. I hope you will join us in making this organization a

success.

To find out more about how you can get involved in this project and use your Internet skills to help your community, please review the information that is in our WWW Homepage area which can be found at:

http://www.winternet.com/~nacec/index.html

An electronic volunteer application form can also be found there as well. Should you have any questions, please address them to my E-mail address above.

* AutoFax - Allows reception of weather fax using Kantronics TNC's
* SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

* ftp://oak.oakland.edu/SimTel/msdos/hamradio/
* ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

* A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5"
or 5.25").
* A Self Addressed STAMPED return diskette mailer.
* A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

MAINTAINER OF THE REC.RADIO.AMATEUR.* SUPPLEMENTAL ARCHIVES AVAILABLE FROM:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

MAINTAINER OF THE INTERNET HAM RADIO CALLBOOK SERVER AT:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the
server's help facility, the rec.radio.amateur.misc FAQ, or additional
server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have
talked with me via E-mail know that. But this time I've actually
started on my rewrite of the callsign server at Buffalo. And I've
finally got a design that I'm happy with. The new searching
capabilities are going to be *much* improved over the current system.
I'll be getting rid of the bugs in the current telnet system and
making it available to more people. Also coming is a WWW front-end for
web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database
look-up system. The old system was very specific to the FCC database
format because that's all that was available when it was written (yes,
the server is very, very old). But now there are a number of databases
floating around the net for different countries and I am rewriting the
system to be more flexible and to accommodate a variety of formats and
search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion

applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

Barry Buelow WA0RJT

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@net99.net (NIC: RC541)

The Phoenix Linux User's group has formed! Details: me.
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large Unix site so I know a little bit about day-to-day Unix operations and Unix installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software
interfacing and machine control.

MAINTAINER OF LIST OF PERIODICALS OF INTEREST TO QRP ENTHUSIASTS, ELECTRONICS
BOOKS OF INTEREST TO QRP ENTHUSIASTS, AND ANTENNA BOOKS OF INTEREST TO QRP
ENTHUSIASTS

Available from the QRP-L WWW Page at:

http://ncc1701-d.cc.nd.edu/qrp-l/index.html

Since QRP-L has moved to lehigh.edu, the articles will also appear at
this address on or about June 1, 1995:

http://www.lehigh.edu/lists/Archives/qrp-l/

(Note: the "A" in Archives is capitalized.)

Please direct all submissions, feedback, and administrivia for these
articles to my E-mail address above.

I serve as an Educational Advisor to ARRL and hence fall within the
loose bounds of their field organization. I know something of the
fundamentals in electronics, having written the current Chapter 6 of
the 1995 ARRL Handbook, and something of antennas, with a series
appearing in Communications Quarterly. I serve on the Board of
Directors of 10-X International and maintain memberships in most of
the QRP organizations, as well as the Quarter Century Wireless
Association (QCWA). As to what I do not know, there are no limits.

I also know something of the craft of technical writing and editing, being director of Techwright, an occasional consulting operation in this field with my wife, Jean, N4TZP, who has been a technical editor and writer since 1980.

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your guest login name (if you have one). If you want a permanent login, write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 KBAUD PACKET RADIO MODEMS

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

(see also Bob Merritt)

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

RELAYER OF AMATEUR RADIO NEWSLINE BULLETINS

Amateur Radio Newsline is produced as an audio service by Newsline, a service of the Westlink Radio Network. The transcribed version is produced by Dale Cary, WD0AKO from materials provided by Newsline, and is jointly distributed to online services and bulletin board networks by Steve Coletti and Dale Cary.

Copyright owner is Newsline. Permission to reuse all or part of either this written or the audio form requires that the item be taken in its entirety, not be subject to any further editing or commentary, and that full credit be given to Newsline as the source.

Permission is granted to all amateurs who want to transmit the audio version in its entirety over nets or repeaters. The text version may be used for packet distribution as long as it is sent in its entirety and the BIN header is kept intact.

NOTICE: When Newsline is transmitted in its full form over voice or digital forms of Amateur Radio, it is recommended that the closed circuit advisory be deleted. Audio, Computer, and Packet retransmissions must be made without the editing or deleting of any other part of the Newsline content. Unauthorized additional commentary to the original message is also prohibited. To do so is a violation of copyright and subjects the initiator to legal action by Newsline.
~~~~~~

Newsline may also be excerpted for code practice transmissions, and may be used as a reference source in bulletin board discussions under acceptable Fair Use practices.

Any other use is not allowed without the expressed permission of Newsline.

Editorial comment, news items and all other business should be directed to

Bill Pasternak, WA6ITF, Newsline's Producer and Editor-In-Chief.
E-Mail - 3241437@mcimail.com or BILLWA6ITF@aol.com

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I

also use SSB. I have had experience with light service on both rigs (including the internal antenna tuner on the 940 and the tube finals on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2 meters, and have recently gotten involved in packet radio (having gained some experience on the hardware end of setting up such a station).

- D -

Matthew A. (Matt) D Alessio KC6VIM

mattd@branson.org -- send here first, please!
mdaless@ocf.berkeley.edu

I cannot claim to be an expert in any field, but I did participate in SAREX as the project coordinator for our school (The Branson School) in the STS-64 mission. I will be happy to help anybody else who is interested in any and all aspects of the SAREX project. I also know a little bit about UNIX administration, but I find myself asking questions more often than answering them.

I am a high school senior, so my real area of expertise is getting young people involved in ham radio. I was a speaker at the Dayton HamVention Youth Forum, and am active in recruiting in my local community.

STATE FREQUENCY COORDINATOR, TEXAS VHF-FM SOCIETY

(We do the repeater coordinating in Texas.)

I have done HF, Satellites, VHF/UHF, and been in amateur radio for 10
years. I don't know it all, but through my contacts I can find someone
~~~~~~

that can usually answer most of the questions.

I also know of several other coordinators in the US and have contacts through the ARRL and a BBS.

Brian Gilhuly VE3BGB

Brian Gilhuly VE3BGB Author of KENTROL, the ultimate in
rig control/logging/memory mgmt software
brian@kentrol.synapse.net for Kenwood HF rigs and MS Windows
CompuServe: 73257,3131
Tel/fax: +1 613 623-9735 Kentrol Web Page:
http://www.synapse.net/~kentrol/
76 McDonald Street S Kentrol FTP Site:
Arnprior ON K7S 2W5 Canada ftp://ftp.synapse.net/private/k/kentrol/

Kentrol is a Windows 3x control program for Kenwood HF transceivers and the R-5000 receiver, which has built-in logging and memory-management capabilities. Since its introduction in 1991, Kentrol has set the standard for Windows-based rig automation, and new features continue to be added regularly. SkedMan is an automated sked manager for Kentrol. Enter schedule data, set alarms, and when an alarm goes off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them, you are most welcome to do so.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section of California.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here,

as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio while really helping out.

JPS COMMUNICATIONS, INC.

For those interested, JPS Communications, makers of DSP noise filters and other radio-related products, has a page on the WWW. The URL is:

http://emporium.turnpike.net/J/JPS/jps.html

Also, I'm in the process of collecting links to pages relating to uses of DSP in amateur radio. If you know of some, I'd appreciate hearing about them. There are a lot of people experimenting with new modulation schemes, voice compression, noise reduction, DSP IF techniques, and lots of other interesting applications. I'm planning to add a page with links to this information, so keep an eye out for it, and if you have something to share, please drop me a line.

Lance Halle KC7FVX

ARRL LABORATORY ENGINEER

* Radio Frequency Interference (RFI) matters
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters

Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

Richard Hieber DL8MFQ, AA8CP

sz0026@daphne.rrze.uni-erlangen.de
AX.25: DL8MFQ@DB0SIF.DEU.EU

Areas of expertise:

* QRP work
* mobile operation
* computers (DOS, OS/2, Linux)
* Packet Radio
* wire antennas

I am an EE student at the University of Erlangen-Nuernberg, Germany. I am active in the university ham radio club (IG-Funk), spending time and thoughts in improving the permanent club display in the lecture hall building. So I have some first hand experience in making printouts and display arrangements visually appealing.

My main interests are shortwave, especially QRP, and computers (Packet Radio, Internet). I have some experience in shortwave mobiling and considerable success with a modified citizens band whip on the bands from 10 to 20 meters. Generally I am fascinated with simple yet effective equipment, hence my obsession with QRP. I like wire antennas. I feel that over the course of time I will more and more learn to appreciate old ham radio equipment (boatanchors) and get more into homebrewing.

I've compiled a list of QRP Clubs worldwide and a FAQ file for the QRP-L mailing list. They are available from the QRP-L WWW Pages at:

* http://ncc1701-d.cc.nd.edu/qrp-l/index.html
* http://www.lehigh.edu/lists/Archives/qrp-l/ (on or after June 1, 1995)

The QRP-L mailing list is intended to be a relatively noise-free environment for discussion of any subjects relating to low-power amateur radio operation. Example topics: portable operation, equipment design and construction, solar and battery power, QRPp, contesting, kit building.

Jack G.F. Hill W4PPT

MOBILE ANTENNA SYSTEMS AND INSTALLATION (PRIMARILY HF)

* power distribution
* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ.

The new mailing list addresses are now

* boatanchors@ThePorch.com
* rra-wg@ThePorch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing your way to hamdom, the cheapskate's approach, let me know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS FRIDAY NIGHT FIST FUNCTION

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq:
80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes, someone scout out a better QRG)

Standard calling signal:
CWIST IMI DE <yourcall> K (if there are no control stations calling for you to check in), or, CWIST DE <yourcall> K (if there is a control station inviting checkins) (The alternative check in for those OTs with salt behind the ears is a simple DE to get the control station's ears followed by DE <yourcall> K when the control station acknowledges.)

Note:
A simple informal net style protocol will generally be used, unless no control station assumes control for the evening, in which case it is an open roundtable format discussion group.

Note:
The midnight local time gathering is designed to maximize the

number of checkins spread out over the world, so less confusion and more checkins are heard. The hope is that someone will be aboard almost anywhere and be heard at least locally, anywhere in the world.

Definition:
A CWIST is a person with an active interest in the PRACTICE and USE of continuous wave radiotelegraphy as directly is applicable to amateur radio. Such PRACTICE and USE may take the form of learning about radiotelegraphy and its history in amateur/commercial areas, its application to radio telecommunication, the practicing of the art and craft of radiotelegraphy, and the refining and developing of the technology of radiotelegraphy.

AUTHOR OF NA4G'S NATIONAL ELECTRICAL CODE FOR HAMS

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one' both in tar-compress (862K, for Unix jocks) and PKZIP 2.04g (732K, for MS-DOS users) formats. Both are available from:

ftp://sunsite.unc.edu/pub/academic/agriculture/agronomy/ham/things-to-build/na4g/

Robert A. Kile KG7D

HOW TO ACCESS THE WB3FFV AMATEUR RADIO INTERNET BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line).
Through user support I hope to keep the latest and greatest ham
software on-line. The BBS also offers access to nearly all of the
Internet (USENET) NetNews groups, plus access to most Internet
services such as E-mail, FTP, TELNET, Gopher, WWW, Callsign Lookup,
Etc... Below is the information that is needed in order to access the
BBS via Telephone, Telnet, or FTP. Please pass it around to as many
ham's as possible.

System Name: WB3FFV
User Login: bbs

+1 410-361-8170 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8/33.6
(V.32bis,V.32terbo,V.34+,V.FC,HST,V.42bis)

TELNET/FTP - telnet://bbs.abs.net/ (login: bbs)
ftp://ftp.abs.net/

WWW - http://www.abs.net/

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)

Software: UniBoard UNIX BBS Software (Version 2.00b)
Misc. Info: Machine is an Pentium-90/MP running UNIX System V Release 4.2MP
and features more than 9 Gigabytes of on-line file storage.
Most transfer protocols are available!! (multi-line system)

I attempt to keep the latest and greatest HAM software on-line, and
encourage all to upload anything new that they come up with, as it is
of benefit to all. Here is a sample of the software that is available
for downloading:

* KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST
Versions)
* KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
* KA9Q TCP/IP for UNIX based systems
* KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
* KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
* N2GTE Packet Message Switch [GTEPMS]
* WA7MBL BBS for the PC
* W0RLI BBS for the PC
* MSYS BBS for the PC running KISS TNC's
* AA4RE BBS for the PC (plus BETA versions)
* F6FBB BBS for the PC
* G8BPQ PC-Node (Version 4.08)
* Various BBS utilities and enhancements
* Several MORSE CODE Tutors
* TheNet software by NORD><LINK
* Modifications for many HAM Rigs and Scanners
* Digital Signal Processing software (DSP)
* DX and contesting programs

If you are interested in using UUCP to connect to the BBS, this can
also be done as I support Anon-uucp. The login to the system is
'uucpanon', and there is NO password. The listing of available
archives are stored in a file called 'FILES', and it is located in the
/var/spool/uucppublic. To retrieve the files listing just use the
following command:

uucp wb3ffv!~/FILES /usr/spool/uucppublic (ASCII Text)
-or-
uucp wb3ffv!~/FILES.Z /usr/spool/uucppublic (16-Bit Compressed)
-or-
uucp wb3ffv!~/FILES.gz /usr/spool/uucppublic (GNU Gzipped)

This will move a copy of my file listing into your uucppublic
directory.

If you want to access the BBS via Telnet, all you have to do is
access:

telnet://bbs.abs.net/

and login is 'bbs' with no password required.

To use anonymous FTP, just access:

ftp://ftp.abs.net/

and login as 'anonymous' (may not be necessary, depending on your FTP client).

AMPR.ORG IP COORDINATOR FOR MARYLAND SUBNET (44.060.XXX.XXX)

(see James Fay's entry instead for ampr.org IP coordination in Prince George's, St. Mary's, and Calvert Counties)

[Editor's Note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

OWNER OF THE MD-HAMS MAILING LIST

The md-hams list has been placed on-line to allow people involved or interested in various facets of Amateur Radio to have a place to talk about local activities in Maryland and the District of Columbia.

To subscribe, send E-mail to md-hams-request@wb3ffv.ampr.org with:

subscribe md-hams <your E-mail address>

in the body of the message. An acknowledgement message will follow shortly.

If you have any questions or problems, feel free to contact me at one of the numbers/addresses above. Good Luck...

AUTHOR OF THE QRZ! HAM RADIO CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 602 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous ftp server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

The URL is:

http://www.qrz.com/email.html

Register your E-mail address today!

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

Luther M. Lord N4DA

n4da@mindspring.com

If you need a good place to get your amateur radio repaired, I can help. Visit the Radio Doctor's home page at:

http://www.mindspring.com/~n4da/top.html

I will answer all technical questions received via E-Mail at my address above. This service is offered presently at no charge.

Dean R. Madsen KE0WO

Dean R Madsen, KE0WO Computer Science Major
Internet: dmadsen@iastate.edu Iowa State Univeristy
ke0wo@iastate.edu Ames, Iowa
AX25: KE0WO @ KE0WO.#NWIA.IA.USA.NA
Secretary for the Tristate Amateur Packet Association
Treasurer for the Cyclone Amateur Radio Club

A few members of our ham radio club were interested in helping out. Since our turnover is usually 4 years or so (graduation is a horrible thing), I thought it may be difficult for us to keep the list up to date. I thought that by creating a local mailing list called elmers@iastate.edu we could add or remove people as need be. There would always be at least one person receiving mail on that list, usually more! Even after I graduate, this list will be maintained allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience, much repeater experience, in addition to a considerable background in

theory, as many here are electrical engineering or computer engineering students. If a question can not be answered by the readers of the list, there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local disabled hams (or hams to be) get on the air. But anyone local who needed help would find a group at their door ready to work.

Fred O. Maia W5YI

3511297@mcimail.com

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
Tel. +1 817 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse code training products are also available from every Radio Shack nationwide. Color photograghs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 817 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 817 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 800 322-1117.

Will Marchant KC6ROL

marchant@netcom.com

I'm one of the SAREX school group technical mentors. A group of about nine of us are assigned by AMSAT/NASA/ARRL to make sure that the schools selected for dedicated contacts on a SAREX flight are prepared. I'd be happy to try handling E-mail from people interested in SAREX.

CIVIL AIR PATROL

CO-HOST - HAM RADIO AND MORE

Ham Radio and More is available for free to any AM station that is willing to run it with national ads intact. If you want there to be a nationwide amateur radio talk show, call your local station and ask them to get the program. They don't have to be part of the Talk America network. They can call KFNN in Phoenix (+1 602 241-1510) or Talk America at +1 508 460-0588.

The Ham Radio & More show, after 4 years on the commercial airwaves, will soon be available via shortwave on WWCR. Beginning June 5, 1995 (Monday early AM), 3:00 AM ET on 12.160 MHz and repeated each Saturday at 5:00 AM ET on 12.160 MHz.

See the entry for Scott Ehrlich for the Ham Radio and More World-Wide Web Page.

myers@fc.hp.com

Antennas, Novice/Tech instruction, batteries, power supplies, RFI, equip. testing/troubleshooting, FAQs, homebrewing. Basic theory questions also welcome.

My particular interest is in antennas and transmission lines, but I'm also more than willing to answer whatever I can in general radio theory, propagation, analog and digital electronics, etc.. (I'm a display engineer in "real life", have done my share of digital design, and have taught communication electronics at the local community college. I'm also active in some display and television standards activities.)

AMATEUR RADIO: ELMERS LIST QUICK-SEARCH INDEX BY SUBJECT

(Note: This index is not necessarily all-inclusive and some Elmers are
listed more than once.)

AMATEUR RADIO EMERGENCY SERVICE (ARES)/RADIO AMATEUR CIVIL EMERGENCY SERVICE
(RACES)

* Chilton (EMA Radio Officer)
* Glago (Sonoma Valley, CA ARES and RACES Director)
* Humphries (ex-Asst. EC)
* Stader (EMAS SEC)

AMATEUR SATELLITE CORPORATION (AMSAT)

* Williamson, P (WWW Page, Anonymous FTP Archive, and Mailing Lists)
* Roth (Portland, OR Area Coordinator)

AMATEUR TELEPRINTER OVER RADIO (AMTOR)/PACKET TELEPRINTER OVER RADIO
(PACTOR)/RADIO TELETYPE (RTTY)

* Sayer (also decoding CHU's ASCII time code)

AMERICA ON-LINE

* Ruh (ATV Quarterly Representative, Ham Radio Manufacturers and
Dealers Section)
* Stader (Host and Manager, Ham Radio Club Forum)

AMERICAN RADIO RELAY LEAGUE (ARRL)

* Bloom (QEX Editor, ARRL CNC Contact)
* Cebik (Educational Advisor)
* Cira (Los Angeles, CA ACC)
* Ehrlich (EMAS Internetworking ASM)
* Elmore (CO TC)
* Goldstein (Volunteer Counsel - Florida Only)
* Halle (Phoenix, AZ Area Official Observer Coordinator)
* Hare (Laboratory Manager)

* Hill (TN TS)
* Jahnke (VEC Manager)
* Lau (Technical Consultant)
* Newkirk (Webmaster, HQ WWW Page)
* Redding (Educational Advisor)
* Sefranek (EMAS TA)
* Stader (EMAS ASM and DEC)
* Tracy (InfoServer Sysop, TIS Coordinator)
* Turner (Volunteer Counsel)

ANTENNAS

* Brewer (wire HF)
* Brubaker (HF)
* Cebik
* Coyle (multi-band wire HF)
* DePolo (Design/Theory)
* Elmore
* Graham (wire HF for apartments)
* Halbert (simple designs)
* Hieber (wire)
* Hill (Mobile, including HF)
* Humphries (VHF and multi-band wire arrays)
* Myers (and transmission lines)
* Ornitz (including computer modelling)
* Rymell
* Salnick
* Salyzyn
* Sefranek (and Transmission Lines)
* Silva
* Standerfer
* Stine (wire HF)
* Stockton
* Taylor
* van de Kerk (HF Low-Profile)
* Zurn (wire HF)

ANTIQUE AND OLDER EQUIPMENT

* Bellville
* Brewer (40's-70's)
* Hill (Mailing List)
* Keys (including HF and CW)
* Paperman (Manuals, Service Information, and Literature)
* Standerfer
* Turner (including Kenwood and Ten-Tec)

APPLE MACINTOSH COMPUTER

* Bellville
* Ehrlich (including Amateur Radio Software FTP Archive)
* Seney (Macnet, including Anonymous FTP Archive and WWW Page)

* Stader (List of Amateur Radio Software)

BATTERIES

* Myers
* Hammill (Sealed Lead-Acid)
* Sefranek (including Solar Operation)

BULLETIN-BOARD SYSTEMS (BBS'S)

* Bertolino (Trance - Italy)
* Cira (HAM*INFO*LINK*SOURCE*BBS)
* Gathergood (CQ Centre - United Kingdom)
* Leadmon (WB3FFV)
* Meredith (F6FBB Packet BBS Support)

CALLSIGN DATA/NATIONAL TECHNICAL INFORMATION SERVICE (NTIS)

* Carruth
* Lloyd (QRZ! Ham Radio CDROM and Callsign/E-mail Registry)

CIVIL AIR PATROL (CAP)

* Moore
* Standerfer

COLLEGE CLUBS

* DePolo (Technical Director, Univ. of Pennsylvania ARC)
* Edwards (Univ. of Maryland ARA)
* French, et al (Ham-Univ Mailing List)
* Hieber (IG-Funk, Univ. of Erlangen-Nuernberg, Germany)
* Killebrew (Trustee, University of Houston Amateur Radio Club)
* Madsen, et al (Iowa State Elmers)
* Schleck

COMMERCIAL EQUIPMENT

* Bellville
* DePolo
* Dodell (Mailing List)
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Wier (ICOM Mailing List)

CW (MORSE CODE)

* Bono (AutoCW)
* Elmore
* Hill (learning hints)
* Keys (including CWIST HF CW Net)
* Salyzyn
* Silva
* Stine
* Stockton
* van de Kerk

* Zurn (including European abbreviations)

DIGITAL SIGNAL PROCESSING (DSP)

* Bloom
* Bruhns
* Edwards
* Gilliver
* Hall (including WWW Page)
* van Vliet (Filters, including Integrated, Distributed, Lumped, and Active)

EQUIPMENT TESTING/TROUBLESHOOTING

* Brewer (Tube Gear)
* Bruhns (Low-Level/Low-Frequency Analog and Transmission Line Measurements)
* Coyle (Kenwood TS-830S and TS-940/AT Service)
* DePolo
* Elmore (Troubleshooting)
* Hare (ARRL Laboratory Manager)
* Lord (including Radio Doctor's WWW Page)
* Myers
* Ornitz (Instrumentation)
* Paperman (Manuals, Service Information, and Literature)
* Rymell (Electronics and Computer Service Work)
* Salnick
* Salyzyn
* Sefranek (including Power Supplies and Amplifiers)
* Seney (Digital Storage Scope FAQ)
* Standerfer (Test Equipment and Measurements)
* Stockton
* Taylor
* Veres (Commercial Radio through 12 GHz, UHF and 2.5 GHz ITFS TV)
* Witte (Instrumentation)

FREQUENTLY ASKED QUESTIONS (FAQ's)

* Adams (QRP Rig Standardized Info Sheets)
* Bowen (Supplemental FTP Archives, Internet Callbook Server)
* Cebik (QRP Periodicals, Electronics Books, and Antenna Books Lists)
* Cheeseman (Australia)
* Dodell (rec.radio.info Newsgroup)
* Ehrlich (World-Wide Web)
* Goldstein (Packet Radio WWW Server, including Packet FAQ)
* Hieber (QRP Clubs and QRP-L Mailing List)
* Hill (Antennas)
* Jahnke (VE Exams Scheduled)
* Lloyd (QRZ! Callsign/E-mail Registry)
* Nobody (General)
* Ruh (Amateur Television)

* Seney (Digital Storage Scopes)

Sounds like kerchunking to me. ;-)

There's a rule of netiquette that follows a generally good idea, "praise in public, criticize in private." Something like that could have been sent by e-mail instead.

So, in the interest of restoring a good example for the readership, I would suggest a change of wording from "loved by the old men" to "appreciated by the clubs he's done a lot of work for," speaking as a member of one of those clubs.

In general, in any club I've seen that's worth being a member of... when young or new members show initiative and interest, at least some members encourage them. It's interesting that it could look to an observer like being a "puppet". In Travis' case, when he was a teen he became an active member and got lots of encouragement. It seems that it must have done well since he's finishing up a successful one-year term as president of the West Valley Amateur Radio Association, a 200-member club here in Silicon Valley. (That position is more work than title.) And we have a new bunch of young members that I think the club is doing a good job of helping. (As I was writing this, I just heard on the club repeater that one of them, a 14-year-old Extra, just got his 50th state for his Worked All States award. I think I hear a QST article in the works...)

After I realized how much of a boost I got from the people who encouraged me when I was a teen, I've been convinced that there are big long-term benefits to encouraging teens when they show interest in a technical hobby, whether that be radio, computers, etc. In general I think Hams tend to do pretty well about encouraging the new and/or young Hams but there's also plenty of room for improvement. Everyone should do their part, even if you don't have time to do more than just act friendly to them. That helps too.

Hallo everybody,
Is there anybody who knows how to modify a Alinco DR-599E VHF-UHF transceiver (it's the European version of the Alinco DR-599T) to enlarge the RX range to the air bands and the civil bands in VHF and in UHF and to the 900 MHZ band?
Thank you, and, please, send the answer via mail because I cannot check the newsgroups so often:)

>73
>
>Jeff, AC4HF

Jeff,
I have had an HTX-212 almost since they came out. It has a few quirks
that are just slightly annoying (You can't save out of band freq - like the
weather broadcasts in memory.) I have had no problem and it is very easy to
set up a repeater freq into memory. Even the odd splits (my home repeater has
a 1.08M split) are not a problem. It does CTCSS both directions out of the box
(Read no add-on board). It has good audio and a 30 memory selection is plenty
for me. You do have to "OPEN UP" the transmit and receive (it is still in band
however) to use many of the repeater that use a lower than RS allowed transmit.
I talked to customer service and their response was that it was intentional and
done to go along with a "gentlemens aggreement" on bandplan. The 10 watt low
is a little higher power than I would like and the 45 high power is fine. The
Squelch is a little wierd in the setting. 50% - 12 o'clock is just S1 on my
radio. It is very hard to squelch out a moderate signal.
All in all I would buy another for my wife, but I want to wait for the
rumored "dual-band" mobile (and give my wife the 2m unit!)

>will sell it to you. I never would do it. It really pissed off the manager.
>Sid George, CPA sid@hal-pc.org
To start with, there is nothing illegal about owning a Xmtr with out a license. I have owned a HF Xcvr for several years now and am still not licensed to Xmit with it. (something about element 1a). But, thanks to RS, I do own a 70cm HT. I was NOT licensed to Xmit with it when I bought it (for $125US - eat your heart out!) but rapidly passed the NoCode Tech as soon as I found a VE.

Thank goodness the US is still free enough to permit us to posess some objects that could be used unlawfully but entrusts us with enough common sense to figure that out for ourselves.

Jeff Wigal <jwigal@wsunix.wsu.edu> writes:

>When I travel through some areas of Seattle, my radio is bombarded with
>intermod interference (at least that's what I think it is)...

Most of the amateur equipment is made to sell features, not quality. By that I mean, the receiver isn't as important as the total bandwidth or beeps and whistles. If you buy a radio designed to receive in 30 MHz bandwidth, don't be surprised if it can't resolve down to 25 kHz.

My Master II radio never got intermod. But it wasn't designed to receive the whole spectrum, just a part of it.

Tucker Electronics 1-800-559-7388 sells a product called Tucker TF-144 for $59 + shipping. It's an inline filter, good for up to 50 Watts. On receive it switches in a filter for only the Ham band. I don't have one, just offering a solution you can investigate. Anything with a helical filter would be an improvement.

Message-ID: <9511071514.AA00907@tix.timeplex.com>
Source record: 235843

I have two 12V 40 AH batteries that appear to some type of storage battery that I can't identify as to type. They are slightly smaller than a conventional car battery, yellow case with a black top. The only markings on the side are "Choride Power" . They have what appear to be nickel plated large terminals. They are also sealed, with no vents and are very heavy for their size. I've checked in the engineering manuals and EEM and I can't seem to ID the vendor nor the type of cells. The only chloride variety that I could find is a zinc chloride which is a primary battery, not a storage type. I'm assumming that these are storage batteries, maybe aircraft type. Any ideas ?

Good for WHOM? I'm sure it's good for all the junk mail distributors
that RS sells their list to and also RS themselves. For the customer,
I'm not so sure.

On what grounds? It is perfectly legal to sell an amateur transceiver to
an unlicensed individual. As for "Uh...well...the guy at Radio Shack
said I don't need a license", that would be his word against the clerk's,
with no proof that the statement was made.

Of course, in this wacko society we live in, we have people spilling hot
coffee on themselves and suiing Mc Donalds for millions of dollars, so I
guess anything is possible.

I am posting this for a friend who doesn't have access to the Internet:

How can he make his Kenwood TM733 go "out of band".

I don't know anything about ham radios, so I can't elaborate. Please
respond to this group, or directly to my e-mail address.

Many thanks in advance,

Lori (for Dennis)

Did your wallet survive, and did you put a copy of your license in your wallet?
If so, make a copy and send it with a 610 requesting a replacement. If you
don't have a copy, give a call to the nearest FCC office and ask their advice.

1745. Looking for frequencies sending CW

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-07 00:00:00 UTC
From: dakidd@cris.com
Message-ID: <dakidd-0711951239020001@192.0.2.1>
Source record: 235849
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner

Hello, folks...

I'm a "wannabe" ham (no license, or gear other than a Pro-43 scanner yet) looking to learn morse in preparation for getting my ticket. I've got Gordon West's code tapes, the no-code plus book from radio shack, and "Now You're Talking!" from ARRL. What I don't have is the patience to repeat the tapes over and over and over while I learn the code. I've found that I get to a certain point, and lose concentration due to the repetition, and everything I've learned up until that point just kinda goes out the window. I also find myself "anticipating" the next letter to come along because I've played the tapes so often. I'm not willing to settle for "just" the no-code ticket, so that option is out.

What I'm looking for is the frequency of a station that sends CW (whatever rate...) that I can tune up on my Pro-43 scanner and practice copying from.
I'd love to be able to tune up W1AW's code-practice "workshops", but I simply don't have the gear to tune that low. (30 Mhz is my bottom end with the radio I have)

I'm in Bay City Michigan, and my radio covers 30-54, 118-174, 220-512, and 806-999.9875 Mhz in either AM or FM mode. If anyone knows of a station I can tune up for some copying practice using this radio, I'd like to hear about it. And yes, I know: Trying to use a scanner as a ham receiver is nuts. When I can afford to buy a "real" Ham rig, I will, but for right now, "Use what you've got" is the catchphrase for this boy...

Email responses preferred if at all possible.

Thanks in advance...

The truth is that since many of the Democrats do not understand radio propagation and the control circuitry for it, one of their KID appointments was playing with the knobs and broke them. No one in the executive branch has the slightest idea how to get things aligned again. Of course, they are trying to run the country with the same lack of knowledge.

Chloride is the trade name of a battery manufacturer who makes lead-acid batteries (you see a lot of them down South). If the batteries you have "slosh" when shaken, they're probably "maintenance free" lead acid cells. If they don't "slosh", then they are probably lead acid gell cells. I don't think Chloride makes anything but lead acid batteries of one kind or another. My best guess is that these are "maintenance free" *tractor* batteries since Chloride is heavily into that market.

Try the Radio Shack 12-626. It costs $39.99 and an AC adapter will
bring it up another $10 or so. It's an AM/FM portable with a clock
and alarm..

Their 12-1592 is a regular household clock radio that doesn't require
an AC adapter. It's priced at $49.99.

No longer true. I recently got a 610 via fax, and since it was not on thermal paper, filled it in, mailed it in, and it was accepted no problem. All they ask is that if you receive on thermal fax paper - noticeable by its shiny surface - that you copy it onto regular paper before filling and filing.

Ten HAS BEEN opening from time to time, even with cruddy sunspots, mostly to south america and caribbean, but worst case is short DX to west coast from my midwest location

Just gotta be there at the right place and right time

For ten to be open as much as it was two years ago (i.e. three years before the officially predicted sunspot trough/valley), check back in a year or three.

it ain't dead, but you gotta look real hard for a pulse... worked a few stations in CQ SSB and sweepstakes

Be prepared to wait on hold with strange messages for a while. It
tells you how many others are on hold to give you an idea of the
lenght of time you will be waiting. Be advised though that this number
in NOT only for 'hams-in-waiting' as you will figgure out soon enough.
I found the folks very plesant (especially for a govt agency!) and
professional. It will take about 5~7 working days from your test date
if your VEC is as fast as mine!

Has anyone out there received satisfactory results with the Ramsey
FX440 transceiver kit? I built one, but once completed, I noticed a plethora of
ploblems. For instance, the microphone amp not working, the VCO being VERY
susceptable to 'mechanical' noise (i.e. touching the board with an insulated
tweaker), no power out, and lousy sensitivity. I thought I did a pretty decent
job assembing this thing, but either I'm WAY off in my assembly techniques, or
the kit's not what it's cracked up to be. I'm going to start troubleshooting
the rig this week (I hope), and will keep any interested parties up to date.

jsoohoo@netcom.com (John Soo-Hoo) writes:

: responsible for what that salesman says and does. The only way Tandy is
: going do something about it is if someone repeater trustee catches an
: unlicensed operator using equipment with the RS label. I dare say that
: if that happens AND the guy who gets caught admits that the salesperson
: told him that he didn't need a license, that Tandy could have a nice
: lawsuit to contend with. That's a lot of ifs, but should this scenario
: come true, I for one will not feel sorry for Tandy/Radio Shack.
: representative of Tandy while he is working.

The radio has documentation with it that indicates that a license is required
for its use. The operator is responsible for its use if they have a license or
not.

: This is true, but salesmen giving false information is also unlawful as well.
: The whole point is not if salespeople represent the majority, but the fact
: that individuals ARE giving false info out of ignorance or intentionally.

Because the salesman gave false information RS would be required to refund the
purchase price with the return of the radio.

How about "personal responsibility"

I suppose you think other sacred American rights are promoted only by "freaks." Here's a hint: read the Fourth Amendment to the U.S. Constitution. Privacy was promoted in the past by such "freaks" as George Washington, James Madison, and Thomas Jefferson.

>Anybody ever wire your place for 220 so you can hook up a linear? HELP!

Ah, yea. Unless you live in a strange area your house is already wired with single phase 220, or 240, or 241 whatever it takes. (sorry... :)

Converting an existing outlet to 240 can be tricky. Most houses are daisy chain wired with each chain going to more than one outlet or light. Putting in new wiring is the best bet. Just use standard 3wire indoor cable and put it in. White to one leg of the incoming, black to the other leg, and the ground to the ground block. Be SURE that you use an outlet that will not accept a standard 120 plug. You'll also need to put in a ganged 220 breaker. You COULD use two single breakers one on each leg, but i prefer the ganged type. It might even be a code requirement. (if it isn't it should be!)

If all this confuses you call an electrical contractor. It might save your life or your house from a fire. Don't play with it if you don't understand how it works. Don't think that it's only house voltage, it's no big deal. 120vac will kill you damn quick.

I travel all summer with the Seattle Cascades Drum & Bugle Corps. (Like a marching band of sorts.) We travel with 2 Semi-Trucks, 2 Busses and an Airporter. We use CB's for communication but we would like to move up to a better radio system for when we spread out. I have investigated the Business Band and GMRS and was wondering which system this group would suggest.

The following are neccecities:
1. Easy to license all of the drivers. (About 10-12)
2. Can be used around the country.
3. Not overly pricey. 5 - Mobiles, 8 - Handhelds

>(Locally, there's a restriction based on aesthetics. It's been
>successfully fought.)

Gee-whiz. This comes up every once in a while. PRB-1 will NOT tell you
whether the restriction you see is legal or not. This is wrong.

Interpretations of PRB-1 by YOUR Federal District Court, or better,
by YOUR Federal Circuit Court of Appeals may give you the relevant rules.
Local decisions are just that, local decisions. If you have a "friendly"
town for amatuers, great, but that does not translate into a broader
legal rule than local friendliness.

PRB-1 is very general, and has been used to strike down ordinances
(never CC&R's mind you) AND has FAILED against ordinances that prohibit
antennas above 30 feet, I believe. It has been cited in Federal Court for the
proposition that no tower might be reasonable, since wire antennas
can work.

REASONABLE advice: Sure, pick up PRB-1. Get the PRB-1 packet from the
ARRL. Then read Overbeck, Antennas and the Law, 1994 in June '94
CQ magazine for a realistic overview.

Do these things and you will be able to ask good, solid, intelligent
questions about the situation of the locals, the local towns and the
local ARRL VC's. You ought to consult them all.

I made a similar trip on I-40/I-70 from Los Angeles to Columbus a couple
of years ago. I took an ARRL repeater directory and charted repeaters in
the major cities. Unfortunately, most repeaters had no other
listeners during working hours. Some repeaters were either off the
air or had a special key-up code I couldn't figure out (or PL).

After a day or two, I put the HT on scan, and started picking up all
kinds of repeaters that are not listed in the directory. I would
break into a QSO and say Hi, and the locals would fall all over
themselves to welcome me as I passed through. This method worked
much better.

In the towns you stay in, ask if there are any tower farms around
that you can tour in the evening. I got to see a big one doing that.

Good luck.

I am the ARRL Local Goverment Liaison for Western Franklin Countny in Ohio
(Columbus). I am currently lobbying a municipality to change some rather strict
antenna guidlines...and it appears I will be successful in accomodating
amateur antennas, and their structures, however, PRB-1 will NOT tell you
whats "legal" and what aint. PRB-1 is a federal bill, that says a local
goverment "must reasonably accomodate an amateur radio operator" for his
communication purposes. PRB-1 is a good tool to use for approaching the
city consil, zoning committee, Mayor, law director, ect. Typically, they
will issue a variance to the ordinance for you, rather than ammend it,
however I have done both in 2 different cases.

There are also good "tactics" to use when approaching a municipality, which
I can share with antbody interested.

>GPS, you have to get repeated readings without moving the GPS.
>If you have a fixed platform, no problem. If you use the GPS in an
>airborne device (airplane, balloon) lots of luck.

I've heard that some GPS units won't work at higher altitudes
(above 60,000 MSL, or somewhere in that neighborhood). By "won't work",
I'm assuming won't give altitude readings, but will give latitude &
longitude readings. Read that a while back on a balloon web page.
Sorry, don't remember the URL address. Won't be a problem unless you're
planning a balloon launch, or own one heck of a plane for private use! :)

>the public at large they have a higher standard of performance when
>it comes to informing people that a license to use the radio is
>necessary,

Here, I agree with MD (a rare occurrence!) So does Radio Shack,
apparently, since they put a notice that a license is required in the
catalog, on the outside of the box the HT comes in, and in the instruction
booklet inside. I haven't noticed that Yaecomwood ever do that.

It's certainly easy to believe that some RS salescritter has recommended
RS HT's for unlicensed use, but such is clearly counter to RS policy.

Whether the RS corporation should be liable for the actions of one
of their customers based on recommendations made by one of their
stores' employees against established company policy, I dunno.
Sounds a little far-fetched to me, but I guess a "good" plantiff
lawyer could convince a judge and jury.

>Don't make the same mistake I did when I first got my ticket. Save up some

I've had a '202 since 1992. Except for buggy firmware (RS eventually gave me a new radio), mine has worked well since. At least 4 people in our club have them and report similar results (only one had to have his replaced).

Beware those on the 'net that will bash RS no matter what! :-) (not that they don't sometimes deserve it, it's just that the '202 is a fine piece of equipment. YMMV.)

Special Bulletin 68 ARLX068
From ARRL Headquarters
Newington CT November 8, 1995
To all radio amateurs

SB SPCL ARL ARLX068
ARLX068 Pact in alien search

The nonprofit SETI (Search for Extra-Terrestrial Intelligence)
League has entered into an agreement with Down East Microwave Inc.
The company, owned by Steve Kostro, N2CEI since 1994, is located in
Frenchtown, New Jersey, and manufactures equipment for amateurs for
6 meters and above.

Under the agreement, according to SETI League Executive Director
Paul Shuch, N6TX, Down East Microwave will produce and market
amplifiers, filters, down-converters, and other receive equipment
designed by SETI League engineers, with profits to be donated to the
SETI League's research fund.

Kostro said that ''radio amateurs are in a unique position to succeed
where government agencies have thus far failed. SETI is no longer
science fiction, but mainstream science, and Down East Microwave is
pleased to have a role in this important research.''

An article about the search for extraterrestrial intelligence and
the role that radio amateurs can play in it appeared in August 1995
QST on page 37.

Hello all. After almost 30 years I have decided that it is time
to get back into ham radio. I will need to learn the code again and
could use some advice. I am considering getting some code tapes and
am looking for opinions on how useful they are. I am looking at the
Code Quick tapes by Wheeler Applied Research Lab of Palm Desert
California and would appreciate comments, pro or con, from anyone
who has experience with them. I would also like to hear of experiences
with other brands. Other opinions would be gratefully considered.
Thanks in advance for any help.

Todd F. Carney (tcarney@wpo.sosc.osshe.edu) recently wrote
in <47ls1k$lh0@osshe.edu>:

: Actually, it's the *same* subject as this thread: privacy.
: *Fortunately*, wise government regulators have insisted
: that it is my right not to have my phone number divulged
: without my consent. I can therefore prevent the phone
: company from publishing my number, or giving it out
: by "directory assistance." Having my number broadcasted
: by electronic code when I place a call is a fundimental
: violation of my right to keep my number a secret from all
: except whom I choose. Consequently, I have had my line
: blocked from caller i.d.

OK, ... Do you open your solid front door every time some one knocks? I usually look out a window to see if it is a salesman or other neusance.

Caller-id provides that same window on your phone. You now have a choice of how to answer. You and I would not open our front door with out identifiying the knocker, you and I now do not have to answer the phone with out knowing who calls. Since you choose not to send your identity, a real privacy freak would choose not to answer your call, but let it go to a recording.

There are phones available that take advantage of the technology and do not even ring unless the caller-id received matches your approved list. The unfortunates not on your list go to a recording or answering machine.

With this technology you can achieve greater privacy and security should you participate.

If you think your number is secret, think again. No number is secret. Look at any number of cd databases and you will find telco non-published numbers as well as street addresses. These databases gather their info from credit and other data sources.

Are you aware that every time you dial an 800 number they get your number? You bet they do as they are paying for the call. There is no way for you to turn off your id on an 800 call.

(cgreenha@magnus.acs.ohio-state.edu) wrote in rec.radio.amateur.misc:

: I have an extra 2m HT which I would like to keep in our 3rd car. Will it
: hurt the radio and/or battery being subjected to freezing wheather? (In
: Columbus, Ohio...it can get down to 0 degrees F.)

I think NiCd batteries can survive 0 degrees. But, LCD displays can be
damaged by cold. Black blotches form that may obscure parts of the
display. Sometimes the blotches will shrink or even disappear when the
rig is warmed up again, but the damage can be permanent.

I don't know what the critical temperature is. I had it happen to one
rig left out in a cold vehicle overnight in winter -- it was probably
down to zero or below. I was surprised to have it happen to a
handi-talky left on the floor of the rear seat of a well-heated
vehicle during a long trip last winter. We were out of the car for
a couple of short stops and a visit that might have been an hour or
so, but no more.

szinski@prairienet.org (Steve Zinski) writes:

>My advise: Go to court. If you show the court that you are willing to
>take time out of your busy day to try and prove your innocence, chances
>are that you'll get a lighter punishment.

There's an advantage in this advice. The advantage is, that the traffic officer may not show up. They expect most people to mail in the fine. I've gone to court three times in my younger days, and the case was dismissed when I was the only one who showed up.

My tactic is this. Go to court. Hope the traffic cop doesn't show up. If he does plead innocent. When the judge asks you to testify, tell him whatever story you can think of. Don't be confrontational. It is only a difference of opinion between you and the cop. Tell the judge the facts, don't try to sound like a lawyer.

Here's a good example. A friend was cited for 50 in a 20. To top it off it was a school zone. He walked away with the case dismissed. What's the secret? The school zone was a 4 lane highway that went from 50 to 20. The signs in most areas say "School Zone, 20 MPH, When Children are Present." This one said school zone, hours of operation. The big win was that the zone was declared a speed trap. After about 100 people got tickets and brought in lawyers, the other folks coming in on their own were sent off without fines also. The big surprise to all, was that the school is 1/4 mile away, and there have never been any of them using the crosswalk. They are ALL bussed to school.

I drive by this area every day, the cops used to hang there all day nabbing people. Now they are gone. Nowhere to be seen. That big priority just seemed to get smaller.

Anyway, this hasn't much to do with radar, less to do with hamming, and my time is up...

NEXT!

1804. HELP: New Ham needs advice on VHF Multi-mode

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-08 00:00:00 UTC
From: John Scruggs <jscruggs@u.washington.edu>
Message-ID: <Pine.A32.3.91j.951108110952.33345A-100000@mead3.u.washington.edu>
Source record: 235813
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Greetings,
I've had my Tech license since 1990 but have never used it due to time and budget constraints. I've recently gotten interested again. After reading the ARRL Operating Manual, I've become interested in the VHF/UHF bands. I'm probably not the "rag-chewer" type, so I'm interested in SSB/CW operations. I would probably use FM for emergencies (on the road or while backpacking) or to talk with Hams with similar interests. Question: What is the best way to get involved in this kind of operations? I've read the brochures for new base station equipment, but the price is out of my league for the near future. I've read the ARRL radio buyer's sourcebook (vol. 1), but I don't have any idea what equipment is appropriate or what a fair price is? I need to get the most bang for my buck. Which equipment would get me started?

Example: A local (Seattle) shop has a Yaesu FT-290 (I thinks that is the correct model) 2 meter multi-mode for $375. It includes a battery pack, 12v power pack, mic, and antenna. I can't find any information about this radio. How old is it? Is it a good choice for my interests? Is the price fair?

If anyone would like to offer advice, or start a dialogue, I would appreciate it.

John

1805. Repeaters masking tones

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-08 00:00:00 UTC
From: Ron Thompson <ron.thompson@wfnia.com>
Message-ID: <47r7nf$4a@lambchop>
Source record: 235814

I was recently experimenting with code squelch on some local repeaters. I found that ALL the repeaters I tried fail to transmit the tones. I thought code squelch would be great to facilitate quiet standby, but it's going to be pretty much useless if it doesn't work through repeaters.

Does anyone know why this happens? Are there any ways around it?

You can block your number on a per call basis. However, just as a
person has the right to know who YOU are when you knock on their door,
they also have the RIGHT to know who you are when you are trying to
"enter" their home with a phone call.
>
>The last thing I need is to have my phone number recorded by

>official you just chewed out for some violation of your
>rights?

First, again, you can block your number on a per call basis by dialing
three digits before dialin the number you wish to reach. Second, every
public official I know of won't talk to a person on the phone unless
they identify themselves.

>
>Really, this caller i.d. nonsense is just another useless
>piece of technology passed off as a great advance so some

>to dilute my inalienable right to privacy.

The caller I.D. is the greatest service the telephone company has offered along with the basic telephone service. It is far from useless. We used to get a lot of prank calls because of we have two teenage daughters. Since they NOW know we have caller I.D., the problem calls have been eliminated. So how do we handle the "private call(s)" when someone has an unlisted number or has dialed in the caller I.D. blocking feature? We bought a display box that will play a voice message for anyone that calls with a blocked number. It tells them we will not accept anonymous calls and to remove their blocking before trying their call again. For problem calls from people we don't want to talk to, we program the number to be blocked. When they call the box answers on the first ring and tells them we are not accepting calls from them at this time. See Caller I.D. gets rid of problem calls, and does not create more.

>
>As far as this "anonymous" caller crud is concerned, just pick
>up the phone and I'll identify myself immediately. In other
>words, I'm not an anonymous caller. I'm an actual person

>I know I can trust you). This redefining of the word
>"anonymous" is quite characteristic of our descent into
>techno-babble and alienated relationships. It's also
>characterstic of the adiction to tinker-toy technology.

Maybe you identify yourself, but not everyone does. If you call my house I will know who you are or I won't answer the phone.

>
>If you don't want to be bothered by phone marketers or other
>unwanted callers then unlist your number and keep a tight hold
>on it.

Unlisting your number does not prevent calls from phone marketers. They sometimes use sequential phone dialers.

And by the way, make sure you block caller i.d.

I have just come out with a new version of my DOVE satellite
decoder program (V2.0). It will decode the telemetry data that comes
from the DOVE amateur radio satellite. In this release are numerous
bug fixes and some new graphing capabilities. It requires windows 3.1,
a packet TNC and a 2 meter rig. This program is FREEWARE and is
available from the following sources:

Internet FTP
ftp.amsat.org /amsat/software/windows/telemetry/dovedv20.zip

RadioSport BBS
619-279-3921 dovedv20.zip

Mail
In the US and Canada send $1 and I'll provide disk, mailer, and
postage. Please specifiy disk size (5.25, 3.5) and send to:

The North Texas Microwave Society (NTMS) is looking for a new location to hold its monthly meetings. Our meetings are currently held on the Friday before the first Saturday at HP in Las Colinas, but our sponsor at HP will no longer be able to host meetings there.

The NTMS is an amateur radio organization whose purpose is to promote amateur radio activity on frequencies above 900 MHz. The NTMS consists of over 400 members worldwide, and our local meetings usually draw 30 to 50 members from Dallas/Fort Worth and the surrounding areas. While we'd like to keep the meeting at the same time and in the same general area as they are currently, we are open to any suggestions.

If you have any suggestions, please email.

Thanks.

Bob Morrow (bobm@msn.fullfeed.com) wrote:

: Go to court, plead not guilty. If the judge finds you guilty,
: your fine will probably be reduced as tickets rarely go for
: full price in court. They can't afford the time to go the
: distance with you, and most are more than happy to plea bargain
: down to a lesser fine. It happens all the time. Stop by a
: court session some day and see what goes on.

My wife recently received a speeding ticket (45 in a 35 zone) and went to court. The judge listened to the officer's story and then asked my wife to make any statements of her own. She was honest and told the judge that she had just pulled onto that particular road and was not paying attention to her speed. She stated that she began to slow down as soon as she realized she was speeding and that's when the officer stopped her. The judge asked if she had a good driving record (she did) and he then reduced the violation from speeding to improper equipment. She had to pay a $29.00 violation and no points were put on her driving record.

My wife said that she observed this scenario many times that day. You can also request that the judge send you to driving school where, upon completion, the speeding ticket is thrown out and you actually end up with a credit of 5 bonus points on your record (these are the GOOD points that'll actually LOWER your insurance).

My advise: Go to court. If you show the court that you are willing to take time out of your busy day to try and prove your innocence, chances are that you'll get a lighter punishment.

Steve,

I'd say go for the HTX-202. You're paying less, but getting a more solid radio. The thing is Intermod-less, and can take a beating. I would highly reccomend it, and if you are really worried about it not working, get the TSP. As far as I can tell, though, there have been more satisfied HTX-202 owners than dissatisfied ones. (I had a Kenwood TH78a, and an Alinco DJ580t; i like the HTX-202 far better.)

That's my bit of input....

Nate, KB9LSX

PS: Congratulations on getting your ticket....

Ken,

Why on earth do you need an antenna tuner for 2 and 1.5 m??? All antenna tuners introduce SOME losses and on VHF frequencies you want to minimise these..... There have been tuner designs but If I were you I would try to correctly set up my antenna system in the first place and not rely on a tuner to "fudge" the system to resonance.

Cheers,

Al Bolton.

I don't own the HTX-202, but I do own the HTX-404 (its 70-cm cousin). I
am extremely satisfied with it. It is packed full of features not found
on radios in its price range (S-Meter, DTMF memories, CTCSS encode/decode,
etc.) I also own an Alinco DJ-180T HT and an Azden 2M mobile. I have
seriously considered selling the Alinco in order to purchase the HTX-202.

I am a retread also, and also had to learn the code again. I had a hard time in 1971 when I passed it the first time. I got Code-Quick (CQ) because it was a method that made sense. It does work. It is not painless and does take work, but I find that copying at 15 is not much harder than at 6. (Using their methods) I find myself using the sound-a-likes for the numbers and punctuation even now.

I tried W5YI tapes and found them difficult and much too repetitive. After hearing the tape twice, I knew it, and could write it with the tape off. This made it hard to progress. The CQ tapes are not cheap, but they do work.

> know what these things are!

As a part-time Radio Shack employee and an extra class amateur radio
operator I think I may be able to offer some insight here.

At Radio Shack the sales persons are paid on commission. It is in
their best interest to know as much about a product as they can in
order to maximize their takehome pay. A commmon problem is the
product that won't 'stay sold'. You can get someone to take the
product out of the store to get you off their back but it'll come back
the next day, or the same day at the Radio Shack 5 miles down the
road. The process of sizing up the customer's need and matching it
with a product on the shelf is called 'qualifying' and is a part of
the basic sales training that your Radio Shack sales person should
have completed.

> Quite a few RS employees in my area are hams, so this problem isn't too
> bad, but for the benefit of the areas without this luxury, why can't RS
> require that all its people pass a simple 25 question test with topics

> unlicensed 49MHz, and CB radio are...". RS now sells all of these radios.
>
> My letter suggesting this is already on the way to
> rs.customer.relations@tandy.com.

I'm not sure that's a valid address. Anyhow the answer you'll get is
that it's already a part of the training process.

There are over a dozen self-study guides that cover such things as
telephone devices (phones, answering machines, caller-id, wiring),
home entertainment (stereos, equalizers, CDs, VCRs, satellite dishes
etc), communications (CB, amateur, commercial, antennas etc), hookups,
small parts, toys and games, computers, home security, auto-sound...
There's an open book test for each study guide. In our district,
everyone is expected to complete the series with a passing grade on
each element.

There's a lot to learn. A person that isn't motivated to learn it will
sell fewer things and have a higher return rate.

In the Detroit area I've seen a high turnover among Radio Shack employees. I don't doubt this is a common problem. Those folks that aren't motivated enough to become good sales people will have poor sales and quit because they aren't making enough money. I'm not boasting but I easily do $100/hour in sales and I get pretty rusty working only a few times per month. Most of the folks in the store where I work do $200/hour. The money's there but only if a person is willing to put the effort into learning the products and learning the sales techniques.

Here's a suggestion: If you need to know something about a product wait for the busiest person in the store. The busiest person is often the most knowledgable. If you walk up to the guy that's leaning against a display watching TV you'll likely get the poorest advice.

I would rate the HTX 202 at a 4. It has been an excellent performer in all condition. I have dropped it several time, once into a puddle of water. It was completely submerged. And many of these drops were over 4 feet onto a parking lot.

After all of this my 202 has NEVER been into the shop once! If you want to get a radio with all the featuers of teh 202 you better bring $400+ to the radio store.

I left a response using the above address to R-S. The next morning I received a response from the 1st level customer relations. His answers were vague and he didn't know that the HTX-212 wasn't a scanner! However the next morning I got a response from technical support that answered my questions correctly. Commendations for at least passing on the questions to tech support when 1st level didn't understand my questions. The answers given were correct, but I was hoping for (a shot in the dark) a different one. The address is correct and they do respond to NON-FLAME questions or comments. Flame them and I think they will add you to their kill file.

Good morning. It's Sunday the 12th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with the news that the Morse Requirement decision has been deferred. The recent World Radio Conference - WRC'95 - discussed the proposal to delete Radio Regulation 2735. This requires national administrations to test for proficiency in Morse code before permitting amateurs to operate on the HF bands. The RSGB Licensing Advisory Committee reports that the Conference agreed that the matter will be on the agenda at a future WRC, possibly in 1999, which will give sufficient time to obtain a considered opinion from all radio amateurs within Regions 1, 2 and 3.

RSGB Headquarters in Potters Bar will be open to visitors on Saturday, the 18th of November, between 10.00 am and 4.00 pm. The bookshop, museum, library and GB3RS shack will be available. Morse tests are also available on demand between 11.00 am and 12.30 pm. Don't forget to bring two passport-size photographs and the appropriate fee with you if you wish to take your Morse test at RSGB Headquarters.

GB2RS listeners may be interested to know that a new broadcast has been started for listeners in the West Herts, South Beds and East Bucks area. GB2RS is now additionally broadcast on 70 centimetres FM channel SU21, that is 433.525 MHz, from the station of G3MEH in Tring, Hertfordshire, at 12 noon each Sunday. The transmission is in parallel with the established broadcasts on 51.530 and 145.525 MHz.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

From Bermuda, N1OCS will sign VP9/N1OCS from Monday the 13th until Thursday the 16th of November. Activity will be on 80 to 10 metres, CW and SSB.

From Madeira, CT3/DK8WF, CT3/DL2HYH, CT3/DF5AN and CT3/DL4ZBI will be active from Thursday the 16th of November until the end of the month. They will be operating on the WARC bands plus 80 and 160 metres. They will also attempt to operate as CT3FN Portable from Ilhas Desertas, which counts as AF-046 for the RSGB Islands on the Air Awards, over the weekend of the 18th and 19th of November.

And from Angola, YO9CWY is signing YO9CWY/D2 and is expected to be active on all bands for several months.

Now news of a special event station operating this week:

GB8CC is operating on all bands until the 16th of November, in conjunction with celebrations in Cleveland around the birth date of Captain James Cook.

Next the Rally News:

The Great Northern Hamfest takes place at the Metrodome Leisure Complex in Barnsley town centre today, the 12th of November. The event features trade stands, electronic components and kits, clubs, repeater groups, Novice and special interest groups and a large bring and buy stall. Morse tests will be available on demand between 12 noon and 3.00pm. Please take two passport-size photographs and the appropriate fee if you wish to take your Morse test at the Hamfest. Talk-in is on 2 metres, channel S22.

Also today, the 12th, the Coulsdon ATS Radio and Electronics Bazaar will take place at the HQ4 Purley Scout Group, Liongreen Road in Coulsdon. Doors open at 10.00am.

And the MARS - Stockland Radio and Computer Rally takes place at Stockland Green Leisure Centre, Slade Road, Erdington, Birmingham today, the 12th of November. Doors open at 10.00am.

On Saturday the 18th of November, the Carrickfergus Amateur Radio Group Rally will take place at Downshaw School in Carrickfergus. Doors open at 12 noon and further details may be obtained from GI0JPR on 01960 361627.

The Rochdale and District Amateur Radio Society Traditional Radio Rally takes place at St Aiden's Vicarage, Sudden, near Rochdale on Saturday the 18th. The event features a bring and buy stand, components and "loads of junk"! Doors open at 11.00am and talk-in is on 2 metres channel S22. For details contact John, G7OAI, on 01706 376204.

Next Sunday, the 19th of November, the Bishop Auckland rally takes place at the Newton Aycliffe Leisure Centre. Doors open at 11.00 am, or 10.30 am for disabled visitors. The event includes an RSGB book and information stand. Further details may be obtained from Mike Shield on 01388 766264.

The Dunstable Downs 23 centimetre FM Television Repeater, GB3TV, which operates on channel RT1-2, returned to service on the 1st of November, having been off the air for maintenance for a month.

Now for the HF contest news:

The Czech and Slovak OK and OM DX Contest is taking place this weekend, the 11th and 12th, on both CW and SSB. Brief rules were published on page 20 of the November RadCom.

The RSGB 1.8MHz CW Contest takes place next weekend, the 18th and 19th of November, for four hours from 2100 UTC on the Saturday. The rules are the same as for the 1996 event, and these were published in the RSGB Contesting Guide in the September RadCom.

And the IARU Region 1 1.8MHz CW Contest also takes place next weekend. Brief rules were published on page 20 of the November RadCom.

Next some VHF contest news:

On Thursday the 16th of November, the fourth event in the 1.3 and 2.3 GHz Cumulative Contest takes place. The rules are in the June RadCom. Please note that this contest takes place between 1930 and 2200 local time as printed in the rules, and not at the times stated in the Contest Exchange column in the November RadCom.

And now the solar factual data:

The period from the 30th of October to the 5th of November saw solar activity at very low levels and the geomagnetic field at mostly unsettled levels. Sunspot numbers declined from 24 on the 30th, to zero for the remainder of the period, with a mean of 12. Solar flux levels varied little day to day and averaged 74 units. No solar flares were reported. The electron fluence remained at moderate levels throughout. X-Ray flux increased from A1.2 units on the 30th, to A8.5 units by the 4th, and then declined sharply to A2.6 units the following day. The average was A2.5 units. The 90-day solar flux average on the 5th was 75 units, no change from last week.

Geomagnetic levels were mostly unsettled, that is with the Ap index between 11 and 20, although on the 1st the level increased to active, with an Ap index of 22 units. The average was Ap 12 units. The aa indices, as supplied by the British Geological Survey for the period from the 24th to the 30th of October, declined from 19.8 nanoTeslas on the 24th, to only 5.1 nanoTeslas by the 28th. Levels then increased and by the 30th were up to 24.5 nanoTeslas. The average was 12.3 nanoTeslas, which is K2.

I'll repeat the figures: spots - 12, flux - 74, Ap index - 12, X-Ray flux - A2.5.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 26th of October to the 2nd of November, saw levels increase to 7.7MHz on the 28th, but then decline to 6.3MHz by the 31st. The average was 7.2MHz. The darkness hour lows averaged 2.7MHz, and declined from 3.1MHz on the 31st, to 2.1MHz by the 1st. The daytime highs took place around midday every day. The darkness hour lows took place at 0500 hours on the 27th, 29th and 1st, but at 2000 hours on the other days. A short period of spread F took place during the early hours on the 2nd.

I'll repeat the figures: highs - 7.2MHz, lows - 2.7MHz.

And lastly the solar forecast:

Later this week the more active side of the sun will be rotating away. Solar activity may be up to low levels, but may decline to very low levels towards next weekend. Solar flux levels are expected to decline

from the 80s back to the 70s. Geomagnetic activity may be at quiet levels for the next few days, but from midweek onwards levels are expected to increase to active conditions. Ionospheric MUFs for the south should be about 22MHz, but may decline in the second half of the week. Levels for the north will be about 3MHz lower. The darkness hour lows are expected to be about 9MHz. The Leonid meteor shower could show increased activity as its parent comet, Swift-Tuttle, swings into the inner solar system. The comet will reach perihelion in 1998 and the alert is out for a potential major meteor storm, perhaps in 1999. This year the shower's peak is expected during the morning of the 18th of November, though members of the shower can occur between the 14th and the 21st of the month.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Oscar and G7 Victor Whisky series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

I am the ARRL Local Goverment Liaison for Western Franklin Countny in Ohio (Columbus). I am currently lobbying a municipality to change some rather strict antenna guidlines...and it appears I will be successful in accomodating amateur antennas, and their structures, however, PRB-1 will NOT tell you whats "legal" and what aint. PRB-1 is a federal bill, that says a local goverment "must reasonably accomodate an amateur radio operator" for his communication purposes. PRB-1 is a good tool to use for approaching the city consil, zoning committee, Mayor, law director, ect. Typically, they will issue a variance to the ordinance for you, rather than ammend it, however I have done both in 2 different cases.

There are also good "tactics" to use when approaching a municipality, which I can share with antbody interested.

1836. CW message at Disneyland

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-09 00:00:00 UTC
From: ring@porky.cb.att.com
Message-ID: <DHsp5q.6IC@nntpa.cb.att.com>
Source record: 235704

Last time I was at Disneyland (a couple of years ago), I was waiting
for a train with my family at the railroad station near New Orleans
square. On the other side of the tracks, there was a replica of an
old railway station, complete with telegraph sounds eminating from it.

My wife asked if I could understand the message, and I said No
because I had learned CW as beeps, and this was clicks.
But I listened closely, and I couldn't make heads or tails of the
message. It almost sounded like random characters, at around 20
WPM. I just figured my mind wasn't into CW while at D-land.
Maybe it was continental Morse, instead of international Morse.

I was wondering if anyone else has tried to pick out the message.

Source record: 235705

> doesn't it make sense to just
>throw it wide open (within the above limits) so Joe average can
>get down to the inch?

General Horner (USAF) said it best: "GPS is sorta like Oxygen on the battlefield; both sides possess it." He wasn't concerned in the least about munitions coming at him which used GPS as its Navigation checks. (He probably knows better than most, that INS is good enough to take munitions to any city, and a few radar cuts good enough to take it to the target). Actually the Oxygen on the U.S. side is a little better with the encryption.

One of the best propaganda wins during the Iraq war, was that SCUD's weren't very accurate. The SCUD uses plain old balistic launch. If it was so inaccurate, how come every SCUD into Riyadh was coming down on the RSAF HQ? The Patriot merely knocked it into the city where it landed on the civilians, or open desert. There's still a lot of SCUD parts on the roofs of the RSAF HQ area. That's a pretty long distance from Iraq to Riyadh, about the same as a cruise-missle distance, but with the added benefit of coming in at Mach 3 (makes a hell of a boom!).

I think opening GPS all the way is an economic problem. The taxpayers put up the money, and any foriegn country that wants to use the "down to inches" feature, can pay royalties to use it. Thus licensed, they are free to use it any way they want. When the check comes in, they get the new months code. No check, no code.

Same with any commercial user like the airlines.

1838. Re: Repeaters masking tones

>facilitate quiet standby, but it's going to be pretty much
>useless if it doesn't work through repeaters.
>
>Does anyone know why this happens? Are there any ways around
>it?

Somebody will do this explanation better than I can, but here goes:
Most of the control functions of the repeater are activated using
DTMF (Touch-Tones (R)). Such things as autopatch, link control, and
repeater site status info are examples. If the tones were also sent
on through, it would be awfully easy for "kiddies" to start using them
for mischief.

A personal experience: I was waiting in the airport in Rapid City, SD,
last year, having a short QSO on my hand-held radio. The other stations
kept saying that parts of my speech were dropping out. We finally found
the reason to be the airport public address system. Every time there
was an announcement made, it was preceded by a loud blast of DTMF.
My HT was transmitting it, and the repeater was muting it out.

There's 3 cents worth...

Source record: 235709

I know this may not be the best group to post this to but I think someone here may be able to help. I recently moved to a new building and I can hear a radio station in the background. There is a radio station antenna about 1/4 of a mile from my new home and sure enough, that is the one I can hear very clearly on my telephone. I can sometimes hear another one but it is not as strong and I don't know where their transmitter is located. Anyhow, the frequencies are 1230 AM and 1450 AM. A guy from US West came over and tried installing some filter that had dip switches to select different bands to filter out but according to the way the dip switches needed to be set, the two stations need ed different settings on the filter so he used another kind that had no switches. This helped but the problem is still there. I tried a ferrite coil in different locations on the phone line just before it reaches the phone, I have also tried relocating the phone and using different phones, all with no luck.
Does anybody have any suggestions.
Thanks so much.

If it's being stored for emergency use, wouldn't it be better to store it
empty, with an appropriate number of alkaline cells? (I'm assuming the
spare HT doesn't need contiuous battery drain to keep any memory it
might have, whether by being rockbound, dial-synth, or EEPROM.
I am most definitely assuming having the adapter for disposable batteries if
it didn't come with one; I've got one on order.)

To all radio amateurs

SB DX ARL ARLD057
ARLD057 DX news

This week's bulletin was made possible with info provided by Jean Michel, F6AJA, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from QST. Thanks to all.

RWANDA, 9X. Mark, 9X/ON4WW, reports his 160 meter inverted-L should be back up soon. Listen for him Fridays at 2330z and Saturdays 0200z and during his sunrise.

NIGER, 5U. 5U7AA likes 15 meter SSB. Listen for him between 21255 and 21270 kHz between 1330 to 1530z. QSL via HH2HM/F.

LESOTHO, 7P. 7P8SR will be leaving Lesotho in a few weeks. He is the only 7P station regularly on CW and low bands. Check 3502 kHz at 0330z, 7018 kHz at 0245z, and 21010 kHz at 1530z.

SEYCHELLES, S7. Gerard, F2JD, should be on the air soon. He will be there until the end of November.

KENYA, 5Z. F2JD hopes to use his previously held call 5Z4JD for ten days in early December.

MADAGASCAR, 5R. Gerard, F2JD, plans to be active from here in January 1996.

MARSHALL ISLANDS, V73. JA1WPX will sign V73WP on AO10 and 13 November 25 to 28. His schedule for OSCAR 13 is November 25 from 0500z to 1300z, looking for JA, NA, VK and AF. November 26 from 0400z to 1200z, looking for NA, JA and VK. And November 27 from 0300z to 1300z, looking for NA and SA. OSCAR 10 operations will be from 1200z to 1500z on the 27th, looking for EU. QSL via JA1WPX direct or bureau.

ROTUMA, 3D2. Though his length of stay is unknown, Ron, ZL1AMO, has been active as 3D2RW. Check 3506 or 7007 kHz between 0900 and 1230z. Brad, SM5DOQ, has been on the air signing 3D2OQ. Most activity has been on the WARC bands. Try 10101 kHz between 1030 and 1330z, 18077 between 1800 and 1900, and 24900 kHz at 2300z. QSL via SM5DOQ.

ITU HEADQUARTERS, GENEVA, 4U1. Mark, AA1AC, will guest operate 4U1ITU November 20 and 21.

BERMUDA, VP9. Joe, N1OCS, will sign /VP9 November 13 to 16. He will operate as his work schedule allows. Plans are to give Novice CW and SSB operators a chance to log Bermuda. A good time to try him is 1100z. Joe suggests 1824.5, 3525 or 3670, 7025 or 7105, 10115, 14025, 18075, 21025 or 21105, 24895 and 28025 or 28100 kHz for CW. On SSB try 1845, 3795, 7065, 14195, 18145, 21295, 24945 and 28495 or 28305 kHz. QSL via N1OCS CBA.

GUANTANAMO BAY. Larry, WB6VGI, will be active as KG4ML December 5 to 12. Joining him on the trip will be Jon, W3JT, who hopes to have secured the call KG4JT. KG4ML will concentrate on the WARC bands. W3JT will be on all bands. QSL KG4ML to WB6VGI.

THIS WEEKEND ON THE RADIO. The OK/OM DX Contest, sponsored by the Czech Radio Club, starts at 1200z November 11 and ends at 1200z November 12. Operate 160, 80, 40, 20, 15 and 10 meters exchanging signal report and consecutive serial number. OK/OL/OM stations will exchange three letter district code. Scoring and other info appears on page 132 in November QST.

The Worked All Europe Contest, RTTY, runs from 0000z November 11 to 2400z November 12. Check page 119 in August QST and page 127 in September QST for more information.

Good advice.
Also, if you're a wise ass and give the cop a hard time, you can bet he'll
be at court waiting for you. So don't be confrontational with the cop either.
This IS getting pretty far off topic though.

1845. Mods for Icom IC-736

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-09 00:00:00 UTC
From: yingst@knighted.com
Message-ID: <47u3tn$les@crier.knighted.com>
Source record: 235713

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

>all with no luck.

Get an AT&T filter and insert in in the line. If that doesn't work, buy an RF proof phone. The FCC published a list of phones, but I don't know where the list is today. Try sending mail to info@arrl.org. Maybe they saved it.

The other thing you may want to do is have an electrician come out and inspect the home. You may just have a bunch of junk phones. See what the neighbors are using, and borrow it.

The best advice is to never move within a 1/4 mile of an AM station.

1848. READ THIS!

Newsgroup: rec.radio.amateur.misc

Message-ID: <47u4kk$osm@nic.umass.edu>
Source record: 235716

BEGIN -- Cut Here -- cut here
Before you start thinking oh no not one of these, take the time to read this completely. Just save and print it out or print it out for later but you really need to pay attention to this. Ready? OK here we go!

I thought these things were scams also but in the last week I received $50,000. in the mail from people around the world. I don't know about pyramid schemes or anything like that but I do know I made $50,000 and all it cost me was a measly 5 bucks. I want other people to join in my good fortune!!!

INSTRUCTIONS:

Follow these instructions EXACTLY, and in 20 to 60 days you will have received over 50,000. in cash.

(1) Immediately mail $1.00 to the names listed below. starting at number 1 through number 5, SEND CASH ONLY. (total investment: $5.00 + postage)> ENCLOSE A LETTER WITH A NOTE SAYING: "Please ad my name to your mailing list". Include your name and mailing address. This is a legitimate service that you are requesting and you are paying $1.00 for this service.

(2) Remove the name that appears as number 1 on the list. Move the other 4 names up one position (number 2 becomes number 1 , number 3 becomes number 2, and so on.) Place your name, address, and zip code in the number 5 position.

(3) With your name in the number 5 position, upload this ENTIRE file to 15 different bulletin boards (local or out of state). You may post it to the BBS'S message base or to the file section. NEED FAST CASH! and use the file description comments to draw attention to this file and it's great potential for all of us.

(4) Within 60 days you will receive over $50,000. in CASH. Keep a copy of this file for yourself so that you can use it again and again, whenever you need money. As soon as you mail out these letters you are automatically in the mail order business. People will be sending YOU $1.00 to be placed on your mailing list. This list can then be rented to a broker that can be found in your local yellow pages listings for additional income on a regular basis.

This list will become more valuable as it grows in size. This is a service. And IT IS PERFECTLY LEGAL! If you have any doubts as to the legality of this service, please refer to Title 18,h sections 1302 NS 1341 of the Postal Lottery Laws.

NOTE: Make sure that you keep EVERY name and address sent to you, either on computer of hard copy, and do not discard the names and notes that people send to you. This is PROOF that you are truly providing a service, and should the IRS or the government agency question you, you can provide

them with this proof! (You will have to pay taxes on all this money if you are honest. It can be QUITE a sum of taxes if you received as much as I did. But hey, it really is bona fide earned income.)

REMEMBER- THIS PROGRAM WILL ONLY FAIL IF YOU ARE NOT HONEST , PLEASE BE HONORABLE... IT DOES WORK! THANK YOU.

1. Eva Jean 19133 E. La Guardia St. Rowland Heights, Ca 91748

2. Lisa Echstenkamper 6290 E. Leisure Ln. Flagstaff, Az 86004

3. K.J. Echstenkamper 13442 Dean Ave. Victorville, Ca 92392

4. Kent Backman 1370 Ululani St. #B415 Hilo, HI 96720

5. Jameson Triplett 47 wildflower dr. Amherst, MA 01002

The following letters were written by participating members in this program.
****
To those with the COMMON sense to participate in this easy money opportunity.
About 6 months ago I received the enclosed post n letter form. I ignored it. I received about 5 more of the same letter within the next 2 weeks. I ignored them also. Of course, I was tempted to follow through and dreamed of making thousands, but I was convinced it was just another gimmick and could not possibly work.
I was wrong! About three weeks later I saw this same letter posted on a local bulletin board in Montreal. I liked the idea of giving it a try with my computer. I didn't expect much because I figured, if other people were as skeptical as I, they would not be too quick to part with $5.00. BUT I BUY LOTTERY TICKETS WEEKLY IN MY PROVINCE AND HAVE NOTHING TOO SHOW FOR IT BUT TICKET STUBS! This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed out $1.00 in each as directed. Two weeks went by and I didn't receive anything in the mail. The fourth week
--More--(71%)
rolled around and I couldn't believe what happened! I can not say that I received $50,000 but it was definitely well over $35,000. For there first time
in 10 years I got out of debt. It was great. Of course, it did not take me long to go through my earnings, so I am using this excellent money making opportunity once again.
****
Being a college student was once very rough for me. I guess you could say that I had become an addict when it came to credit cards; I bought crap that I did not even need. The only problem was that I could not afford to pay my bills due to my spending habits. My debts ran well into the thousands when my credit card companies started to take action and made several attempts to get the money that was owed to them. I sat down and tried to come up with a solution to my problem; I made several attempts to get the money that was owed to them. I sat down
and tried to come up with a solution to my problem; I did not want my credit completely destroyed and I was sick and tired of the harassment.

One day a friend called me up on the phone and told me about this deal. "Yea right" was my initial response, He said: "you are already in debt in the thousands, what is another five bucks." I contemplated the situation , and decided 'what the heck!' I followed the instructions and in a few of weeks, I began receiving the cash that I needed to solve my
--More--(89%)
debt problem and much more!

FOLLOW THE INSTRUCTIONS AND GET READY TO ENJOY!!
Please send a copy of this letter along with enclosed letter so together we can convince people who are skeptical that this really does work!

Good Luck,

Charles Kust

P.S. Everyone participating in this program keeps track of all the names from whom they receive money. If you decide NOT to be HONEST, and not send money to the 5 people on the list, you can always be tracked down and sued, and I'm sure that you DON'T want that. Well, in any case, we hope that you follow through with all the instructions in this letter in order to keep this thing going. If you do, you may expect to start getting mail from your first clients in less than three weeks. Good luck, and we hope that you can benefit from this, just like numerous others from coast to coast, and all over the world.
END---Cut here---

The packet boat S.S. _Eastland_ was an interlake steamer used primarily for Great Lakes excursion trips. She was built sometime around 1910. During the time between 1910 and 1915, there had been several warnings (by naval architects) that there was a problem with listing...but nothing was ever done to fix the problem.

On July 24, 1915, more than 7,300 people (mostly Western Electric Co. employees and their families) were going to an annual picnic sponsered by the Hawthorne Club. Around 6 AM people started boarding the _Eastland_ and the other four ships. In half an hour there were over 3500 aboard (the capacity of the ship was 2500).

Just before 7 AM, while her starboard side was still tied to the loading dock, the passengers made a rush to the port railing when they saw a photographer taking pictures from a nearby bridge. The _Eastland_ starting tipping and, even though the crew tried to order the passengers away from the port side and the engineer opened the starboard ballast tanks to try to compensate for the list, she quickly broke free of the

moorings, turned flat on her port and settled on the river's bottom.

Thousands of people struggled in the water. Some people were trapped below decks (40 were saved by cutting through the ship's side with acetylene torches). The final death toll was 852.

1850. This Week in Amateur Radio #137 (for air through 11/17/95)

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-09 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <RhMEKeT.sanderman@delphi.com>
Source record: 235718

Here is a summary of news items covered on edition #137 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 17-Nov:
-
1. Shuttle Atlantis Scheduled for Lift-off with an All-Ham Crew
2. Amateurs Aboard MIR Continue Making Station Improvements
3. VE3ONT Will Not Be Operational for ARRL EME Contest
4. Austrian Amateurs to Celebrate Millenium with Special Calls
5. TAPR Expands Home Page Services for Internet Users
6. R.A.D.I.O. Establishes WWW Home Page
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. "This Week" to Carry Live Telephone Call-in Segment Next Week
9. Upcoming Special Event Stations with George Bowen, N2LQS
10. NASA Successfully Launches New CalTech "SurfSat"
11. "The RAIN Dial-up" from Chicago
12. Weekly Propagation Forecast
13. Major Geomagnetic Disturbance Detected by NASA Scientists
14. "Amateur Radio Newsline" - Edition #952 from Los Angeles
-
Funding for the program's transmission and production expenses was
provided this week by a grant from the AREC Repeater Group, of West
Palm Beach, Florida, which carries "This Week in Amateur Radio" on
the WA4HXZ repeater on 146.67 MHz, and heard in West Palm Beach,
Fort Lauderdale, Jupiter, and the Bahamas. Satellite time and
uplink equipment have been provided by SKYVISION as a service to
the amateur radio community.
-
"This Week in Amateur Radio" is a weekly amateur radio news and
information service, in audio newsmagazine format, which is produced
by Community Video Associates, Inc., a New York State not-for-profit
corporation based in Albany, New York. The program is carried on
the "Tech Talk Network" each Saturday at 8:00 PM (EST) on the
Telstar 302 commercial communications satellite, transponder 21
(11V), 5.8 MHz wideband audio (4.120 GHz), located at 85 degrees
west longitude in geosynchronous orbit, and can be heard on various
VHF/UHF repeaters throughout the United States and Canada, as well
as on 160 meters at 1860 kHz. Contact your local amateur radio club
or repeater operator if "This Week in Amateur Radio" is not being
heard in your area.
-
Production and transmission expenses are underwritten by
contributions from repeater system operators, amateur radio clubs,
and individuals. For further information, contact George Bowen,
N2LQS, at 518/283-3665, or Stephan Anderman, WA3RKB, at

518/664-6809. You may also reach them via amateur packet @
WA2UMX.FN32AW.ENY.NY.USA.NA or on the Internet to KXKVI@DELPHI.COM
or SANDERMAN@DELPHI.COM.

Caller ID is nothing but a way for the phone co's to make more money!
They sell you a service, then sell the "other side" caller ID blocking
to negate the caller ID. It's a win win situation for ma bell!

Dear Markus,

Thank you for coming back.
Yes, I have an overall idea what is SINAD.

But there are figures in this standard,
and I would like to reference them to other known units.
Say, level 1 in SINAD is N dB, or something like this.

Thank you,
Oleg UA4CIF

1857. Mods for Icom IC-736

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-09 00:00:00 UTC

Subject: Mods for Icom IC-736
Date: 9 Nov 1995 23:52:06 GMT
Organization: Knighted Computers
Message-ID: <47u476$les@crier.knighted.com>

Does anyone have any mods for the ICOM IC-736? I'm looking for a way to
turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna). I'm also looking for a way to
improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).
I had a IC-737 that had the same problem with the audio,
just not sounding quite right. I am also interested in any other mods
for the Icom IC-736. Please send any replies to yingst@knighted.com Note:
If you post a reply into this newsgroup I proably wont get it,
my internet provider only holds news for 1 day. Thank You. Harry

That's fine. But don't expect many of your calls to get through to those who have Caller ID and blocked-call blocking. They will block your calls as a result.
>
>The last thing I need is to have my phone number recorded by

Caller ID is one of the most wonderful inventions of modern electronic times. As I mentioned in a previous post, it eliminates all sorts of

unwanted telephone calls: telemarketers, ex-significant others, bosses on days off, neighbors that like to gossip for hours on end, bill collectors, etc.

>As far as this "anonymous" caller crud is concerned, just pick
>up the phone and I'll identify myself immediately. In other
>words, I'm not an anonymous caller. I'm an actual person
>with a real name and I'll give it to you anytime you ask (if
>I know I can trust you). This redefining of the word
>"anonymous" is quite characteristic of our descent into
>techno-babble and alienated relationships. It's also
>characterstic of the adiction to tinker-toy technology.

If you're not someone who I have given my telephone number to and requested that you call, you are anonymous as far as I'm concerned. Leave a message on the answering machine as to who you are and why you're calling me. If I feel the need, I will "pick up" or return your call.

>If you don't want to be bothered by phone marketers or other
>unwanted callers then unlist your number and keep a tight hold
>on it. And by the way, make sure you block caller i.d.

Keeping a "tight hold on it" is impossible in this age of computer-generated lists of telephone numbers which are randomly distributed to all sorts of undesirable folks. Also, why should I PAY EXTRA every month to the phone company for the "privilege" of maintaining an unlisted phone number? Go ahead...block my Caller ID if you wish...but don't expect your calls to get through. If you want to talk to me, you will first need to reveal your identity. Then I will make the decision as to whether your call is worthy of my time. It's my telephone and my phone number that I am paying for every month; I most certainly have that right.

Let us know the repair report. Perhaps you has the thing set up with the
datum (ellipsoid constants) appropriate to a very different part of the
geoid. The receiver really doesn't have anything to go out of adjustment.

My experience with my Trimble Ensign has been totally "nominal" in the NASA
sense of the word.

Yea, but you can calibrate your compass every sun-up and sun-down.
I did about four 5 mile hikes in survival school, and with triangulation,
the compass and map is all the technology you need to navigate.
Hikers don't need altitude, and the latitude and longitude are about as
useful as... well, you know what they say :-)

The compass error (due to magnetic disturbances, etc) is easily
recognized about the second time you triangulate.

>Help!

Mathew,
Don't be worried about buying the 706. It is an excellent radio!
I got mine last week, and I love it.
I have two comments.
I thought I had a transmit audio problem, but I played around
with the settings, and found this not to be true.
The only thing I would change on this radio if I could, would be
the fan. It runs all the time, and speeds up when you transmit. I
would rather see it temperature controlled, like my Icom 751A. I
think however, that it may have to be like it is in order to
maintain the small size of the radio, without large heat-sinks.
It is about the same noise level as a computer fan. Really not a
major problem though.
This radio has many great software features, and with 6M and 2M
all mode, it is like getting three radios in one.
Recieve audio is quite clear, I don,t detect any distortion (by
ear), like some of the other HF radios that have recently come
out.
Reciever sensitivity seems to be very good. On two meter FM, it
is better than my FM mobile rig (with the preamp on). HF also
very good.

There's an adapter cable you can buy that will allow you to use the Icom TT mikes with the rig. And 10 watts out is just right to drive my 10 in 160 out KLM amplifier. I like the radio a lot, but I have noticed a couple of quirks. I don't like the dumb duplex system that doesn't understand we need + offset as well as - offset to accomodate repeaters in the 147 MHz segment. Ideally, the softkey would cycle through + - and reverse, but instead you have to go to the initial set menu to change the offset from - to + (or just enter all the + split repeaters as split frequencies rather than duplex frequencies using the quick split function). Icom should update the firmware to allow cycling the duplex split, however. And the noise blanker seems ineffective on powerline noise, though it works on ignition noise. A variable sensitivity adjustment would be helpful, could be done with a softkey.

On HF, though, it's a dream. I love the 1 Hz tuning, and the ability to slow the tuning rate to 1/4 normal for digital. Tuning steps are selectable at 1 Hz, 10 Hz, 1 kHz, and 1 MHz. I wish they hadn't skipped 100 Hz, that would be useful for rapid band scans. 1 kHz is too coarse for anything other than rapidly tuning to a selected band segment and then shifting back to 10 Hz or 1 Hz. (Another firmware change.)

The IF shift is nice, love the graphic display, but I still miss having PBT too so I can infinitely vary the bandpass. The optional FL-100 500 Hz filter is *essential*. The CW-R feature is novel, and useful (there's even a built in keyer if you go for that manual stuff (it'll even operate off the mike up/down buttons if you don't have paddles), I let the computer

deal with sending and receiving Morse so this is all moot to me). I've also found the memories useful, contrary to my expectations. I've got several popular HF digital frequencies programmed, and I can scan them for activity. TR is fast enough for AMTOR, or any other digital mode, and the radio continues the fine Icom tradition of good thermal design, though I was dubious about that at first due to the small heatsink. The little fan makes it work, but that fan runs *all* the time, and that can be annoying when just monitoring at a quiet location. A thermostatic switch ought to be added.

And I appreciate the WFM mode, even if it isn't stereo. I can monitor the aural VHF TV carriers as well as commercial FM broadcast. The FM broadcast reception is only a novelty in a vehicle with an AM/FM radio, but being able to monitor TV audio is useful.

Intermod problems have been minimal, though use of the preamp/attenuator switch is required at times to handle the dynamic range. My IC735 is better in this regard, and the crunch proof FT-900 is better still. Without seeing a schematic (none included, major bummer) I don't know if dynamic range can be easily improved or not. I like the big easy to read display, but find the [TS key a bit too close to the tuning knob. I'm always bumping the tuning when accessing the TS key. I don't use the lock key, but if I did I expect I'd be complaining about its location too. There's a two position dial friction adjustment, and that serves well enough to prevent accidentally knocking the tuning off frequency.

One of the best features of the rig is the ability to hook the microphone to the main unit while remote mounting the head. This gets the mike cord out of the way instead of tugging at the control head and tangling with the steering and shift levers. (You can mount the head at a convienent spot on the dash while stashing the main unit under the seat and bringing the mike cord up from there.) OTOH, if you trunk mount the main unit, you don't have to run a separate mike cable, instead you *can* plug it into the head. That flexibility is a nice touch.

The little internal speaker is *little*. It's Ok in a quiet vehicle, but an external speaker is better (and necessary if you remote mount the main unit). Icom offers a good external speaker, or you can do like I do and use a Motorola speaker. Of course there's a C-IV interface, and an accessory connector that brings out most everything you could imagine needing. There's a separate FSK jack too. This radio is a portable/mobile digital operator's dream come true.

If it covered 70cm, it would be good for satellite operations also. However, the addition of a MMT432S or SSB Electronics transverter takes care of that little omission (It'll do mode A without the transverter, but you need the 70cm transverter for mode B or J). With the very flexible split ability it has, the 706 can drive the transverter from 10 meters while also operating 2 meters. (Don't forget to put 10m into QRP power level to avoid frying the transverter. Very nice feature is that power level can be programmed band by band.) The only flaw is that you can't listen to the downlink at the same time

you're transmitting. That's a fairly serious problem. Ideally, the radio would have dual band duplex capability so you could monitor 2m while transmitting to the transverter on 10m (or better, have 70 cm capability built into the 706). Now *that* would make the radio *perfect*. :-)

For those who like to scan VHF Hi-band, we've discovered a mod that restores sensitivity, but at the cost of reduced sensitivity below 120 MHz. Icom should really make a firmware mod so that isn't necessary. The preselector filter should switch automatically when you tune the different ranges.

To sum up, this is a very nice radio, and at a very nice price considering what things cost today. I'd make a few firmware changes, and move a couple of buttons half a centimeter if I could (and I hope Icom considers doing at least some of the firmware changes I've suggested), but I'm pretty happy with the radio as it is.

Gary

I use an active antenna for listening to Shortwave Stations. The model is a Datong AD-370. It works well with not too much "HUM" or other generated noise. I have never used it in the ham bands for the obvious reason - transmitting into an active antenna will fry the antenna!

John

P.S. Glad to see someone from Clemson reading this group. I have a couple of degrees from there.

>>How old is it? It came out around 1986

>73, Moritz DL5UH

Moritz hit it on the head on the 1,2,3 approach.

On the FT-290, I don't know about lousy, but you get what you pay for.
Considering its age and size, its not too bad of a radio. I recommend a
pre-amp, a small power amp or combo. I agree with Moritz, that I wouldn't
plug it into a 100+ watt unit. That price isn't terrible, but isn't great
either. The new version of the radio (FT-290RII) runs about $650 - $675
street price, and INCLUDES a detachable 25 watt linear amp for the price.

I've got a FT-290R (VHF) and the newer FT-790RII (UHF), and have had pretty good luck with both. I use the pair for OSCAR work on AO-10, AO-13, and FO-20. My setup is pretty average (or below) for an Oscar station, and I can hear and work anything and everything my friend across town can with his $1800 FT-760 and better antennas.

For reference, I'm using:
UHF:
Cushcraft 38 ele 432 MHz cross yagi
no pre amp
no power amp (790RII has 25 watt output)

VHF:
Homebrew 14 ele 144 MHz cross yagi
el-cheapo 15db gain bipolar noisy pre-amp
Mirage 30 watt power amp

Good luck!

Well, unfortunately, the U.S.P.S. disagrees with you about the legality
and the statistics professors out there at the University of Hawaii will
be glad to tell you that chain letters require more people than the
population of the earth to succeed more than a few levels.

Here is what the U.S.P.S. has to say:

ftp://garbo.uwasa.fi/pc/docs-net/chain.txt:

" FROM THE UNITED STATES POSTMASTER GENERAL:

Chain Letters

A chain letter is a "get rich quick" scheme that promises that your mail
box will soon be stuffed full of cash if you decide to participate.
You're

told you can make thousands of dollars every month if you follow the detailed instructions in the letter.

A typical chain letter includes names and addresses of several individuals whom you may or may not know. You are instructed to send a certain amount of money--usually $5--to the person at the top of the list, and then eliminate that name and add yours to the bottom. You are then instructed to mail copies of the letter to a few more individuals who will hopefully repeat the entire process. The letter promises that if they follow the same procedure, your name will gradually move to the top of the list and you'll receive money -- lots of it.

There's at least one problem with chain letters. They're illegal if they request money or other items of value and promise a substantial return to the participants. Chain letters are a form of gambling, and sending them through the mail (or delivering them in person or by computer, but mailing money to participate) violates Title 18, United States Code, Section 1302, the Postal Lottery Statute. (Chain letters that ask for items of minor value, like picture postcards or recipes, are may be mailed, since such items are not things of value within the meaning of the law.)

Recently, high-tech chain letters have begun surfacing. They may be disseminated over the Internet, or may require the copying and mailing of computer disks rather than paper. Regardless of what technology is used to advance the scheme, if the mail is used at any step along the way, it is still illegal.

The main thing to remember is that a chain letter is simply a bad investment. You certainly won't get rich. You will receive little or no money. The few dollars you may get will probably not be as much as you spend making and mailing copies of the chain letter.

Chain letters don't work because the promise that all participants in a chain letter will be winners is mathematically impossible. Also, many people participate, but do not send money to the person at the top of the list. Some others create a chain letter that lists their name numerous times--in various forms with different addressee. So, in reality, all the money in a chain is going to one person.

Do not be fooled if the chain letter is used to sell inexpensive reports on credit, mail order sales, mailing lists, or other topics. The primary purpose is to take your money, not to sell information. "Selling" a prod-

uct does not ensure legality. Be doubly suspicious if there's a claim that
the U.S. Postal Service or U.S. Postal Inspection Service has declared the
letter legal. This is said only to mislead you. Neither the Postal Service
nor Postal Inspectors give prior approval to any chain letter.

Participating in a chain letter is a losing proposition. Turn over any chain letter you receive that asks for money or other items of value to your local postmaster or nearest Postal Inspector. Write on the mailing envelope of the letter or in a separate transmittal letter, "I received this in the mail and believe it may be illegal."

>radios (did I say a second-hand IC-735).

You're right, the 706 is no 735. I've been operating the two side
by side for a few days now. The 735 has better dynamic range, better
filters, and has PBT to let you tailor the filter bandwidth to suit
the signal you are copying. But you can upgrade the 706 filters,
the dynamic range problem is somewhat manageable with artful use of
the preamp and attenuator, and the radio is more convienent to
operate than the 735, and certainly easier to use mobile. All the
mods for this radio so far have been to improve out-of-band performance,
but when the schematics are finally available, I hope some mods will
be forthcoming to enhance its dynamic range. That's the *real*
drawback to this otherwise excellent little radio. (For mobile use,
which seems the primary niche for this radio, the lack of dynamic
range isn't as much of a problem because the antennas are inherently
narrow banded and have limited sensitivity. So dealing with huge
signals out of band isn't as much of a problem.)

With the optional 500 Hz filter, this little radio is a digital
operator's dream. Everything you need is brought out the back,
and the slow tuning is a godsend compared to the coarse and
quick tuning of the 735. Even tuning a Clover signal is a
piece of cake. You don't have to hold your breath while
nudging the knob like you do with the 735. And of course
having 6m and 2m allows you to do meteor scatter packet on
6m and regular terrestrial packet on 2m. I haven't tried
9600 baud yet (we don't use 9600 on 2m around here) but
I'm going to do some experiments this weekend to see what
the BER looks like. With a 70cm transverter, the radio
even does an acceptable job with amateur satellites, though
lack of full duplex capability is a limitation.

Hi !

I am beginner sysop F6FBB BBS.
I want to do forwarding via InterNet.
Simple scheme is:

```
|F6FBB BBS| | PAD | | GATE | |F6FBB BBS|
| PC 386 |----| X.25|----|X.25/IP|- - - - -| with IP |
|Ser. COM | | | | | | |
```

I would like to made following protocol:

1. From my BBS I get access to PAD port (this port on PAD
I can configured as desire) and waiting PAD prompt.
(for example: "SYSTEM>")
2. Then I send network address to connected with GATE X.25/IP
(for example: "210046") and waiting InterNet prompt.
3. Then I send my login, password, and "telnet xxx.xx.xx.xx"
4. Then I send login and password again and connecting to BBS.

My questions are:

1. How I can to get access from F6FBB BBS to remote device
(Asynchronous PAD) and to see its prompt? That must be
single-user cable connection (as RS-232 remote terminal).

2. May be possible to made procedure to automatic realization
my protocol (see above)?

My software:

MSDOS 6.2
F6FBB 5.15
G8BPQ 4.08a

Thank you.

>get down to the inch?

Even if they turn SA off, and my house is wandering in a 397 foot circle this morning due to SA, the accuracy of civilian receivers is still not down to the inch. The best I saw during Desert Storm, when they did turn SA off so the military could use civilian receivers (they didn't have enough military receivers and had to turn to the civilian market), was a circle 114 feet in diameter. To get better accuracy than that, a military receiver operates on two different frequencies. That allows compensation for variances in the ionosphere which represent the residual error after SA is off. Using both frequencies, the error circle drops to about 60 feet. To get better than that, there are two other methods. One operates directly on received carrier phase, using a time difference of arrival method. And the other method depends on a error delta from a benchmark receiver, which is what differential GPS is about. Using this latter method, errors can be reduced down into the centimeter range for stationary or slowly moving receivers *even if SA is on*.

So with the system of differential benchmark receivers and transmitters being installed by the Coast Guard and the FAA, we can get better accuracy with civilian receivers than the military can get with their precision receivers. Just turning off SA wouldn't do that for us. If you use a differential GPS equipped receiver, you don't really care about SA anymore. It would be nice if the military turned off SA, but it wouldn't give us the accuracy we can get with differential systems, even with SA on.

>it didn't come with one; I've got one on order.)

Yeah, disposable batteries, preferrably lithium cells, have the longest shelf life, and they pack more energy than NiCads too. You should always have a set or two around for use in emergencies. But you already have the NiCad pack, and you might as well get some use out of it too. By topping the charge at least once a month, you can keep it ready to go too. The chemicals *are* being consumed, even with this maintenance charge, however, and you're wearing the cells out to little purpose. (No chemical reaction is *perfectly* reversable, so the more you cycle a NiCad, the quicker it will wear out.) My suggestion is to use NiCads in daily use radios, and keep disposable cells with long shelf lives around for emergency use.

Hi Greg.

What do you mean "message handling"? Are you refering the to National
Traffic System (NTS)? If so, traffic is sent in ARRL Radiogram format.

I am the Central Ohio Traffic Net Manager, and handle thousands of
pieces of traffic a year.

If this is what your looking for, email me for specifics.

1903. Re: Question to radio engineers about SINAD

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-10 00:00:00 UTC
From: wa6ube@aol.com
Message-ID: <4800hr$q2k@newsbf02.news.aol.com>
Source record: 235753

yes. > SINAD = Signal /signal+noise+distortion

A modulated FM signal (usually) with 2/3 system deviation (for +/- 5 KHz for full
deviation, use 3 KHz deviation for the test-tone) ..

A modulated FM signal more accurately checks receiver sensitivity and also the
modulation acceptance capability of a receiver.

a 12 dB signal to noise ratio, when using a "SINAD" meter works well for peaking
the sensitivity of the receiver because a slight change in signal level during
adjustment of the receiver's pre-selector stages or local oscillator multiplier chain
will move the needle of the "SINAD" meter quite a bit. This way you have a
sensitive method of adjusting the RF-tuned stages for maximum sensitivity..

There are two signal channels in a sinad meter. One has a 1 KHz audio filter to
trap out the signalling tone that is present in the receiver output. The other signal
path in the sinad meter does not have the 1 KHz filter. The meter shows the
ratio between the one path that has the signal, noise, and distortion present in the
receiver out put. The other path only has the noise and distortion as the
signal tone is filtered out by the 1 khz filter. The result is basically
signal to noise ratio.

does this help?

Propagation Forecast Bulletin 47 ARLP047
From Tad Cook, KT7H
Seattle, WA November 10, 1995
To all radio amateurs

SB PROP ARL ARLP047
ARLP047 Propagation de KT7H

Solar activity is unchanged, with very low solar flux and periods of zero visible sunspots. Flux values continue to drift around the low to mid seventies.

The most active geomagnetic period was November 6, when the K index went to five. Stormy conditions are expected due to recurring coronal holes around November 14 to 16, and again from the 27th through December 2, although not as severe. November 20 through 25 should be quite stable and quiet.

Sunspot Numbers for November 2 through 8 were 0, 0, 11, 0, 11, 11 and 34, with a mean of 9.6. 10.7 cm flux was 73, 72.6, 73.2, 75.1, 74.8, 73.3 and 76.3, with a mean of 74.

The path projection for this week is to Lesotho, 7P, from Toronto, Ontario, Jacksonville, Florida and Oklahoma.

From Toronto 80 meters should be open from 2200 to 0330z, 40 meters from 2100 to 0400 and 30 meters from 2000 to 2200. Check 20 meters from 1730 to 2000 and 17 meters from 1500 to 1800.

From Jacksonville check 80 meters from 2230 to 0330z, 40 meters from 2200 to 0400, 30 meters from 2100 to 0300, 20 meters from 1900 to 2200 and 17 meters from 1630 to 2000. 15 meters should be open on most days from 1430 to 1900.

From Oklahoma check 80 meters from 0000 to 0230z, 40 meters from 2300 to 0330, 30 meters from 2200 to 0100, 20 meters from 1930 to 2300, 17 meters from 1600 to 2100 and 15 meters from 1600 to 1930.

1907. Standard #C5608DA - sub audibles?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-10 00:00:00 UTC
From: tedt@halcyon.com
Message-ID: <tedt-1011951751300001@blv-pm11-ip27.halcyon.com>
Source record: 235757

I have a Standard C5608DA and would like to install a sub-audible tone. I don't find anything in the anual.

If someone knows how to do this, Please email.

Thanks

Ted - KB7ZQQ

>Is there a radio engineer who could explain
>the standard figures of a measurement system SINAD?

The term SINAD is a corruption of S/NAD which stands for
signal to noise and distortion ratio. It simply means that
at some signal levels the receiver may introduce distortion
products which add to the noise. The presence of those
distortion products makes the signal harder to hear. At any
given signal level the signal to noise ratio will be larger
than the signal to noise and distortion ratio.

Disney World Repeater PL ?

11-10-95

I am making a trip down to Disney World and would like to know if the repeaters down there require PL. I am only aware of two repeaters in the area 147.3 and 442.0 I would appreciate it if some one could tell me if a PL tone is required. Also if I would be interested in the coverage of these repeaters though out the park. I am planning to bring down a couple of HTs.

Thanks, Dale

I had an RF engineer friend who used to work in a lab where there was one fellow who listened to an FM radio quite a bit. Well, this friend used an HP signal generator that had FM capabilities and an audio input for modulation with a radio on the AM band. He basically arranged it so that no matter which frequency the guy tuned to on his FM radio, he would only hear WJR on 760AM in Detroit.

And I would like to point out that I've used the Rayovac rechargeable alkalines for about two years now and find them to be every bit as long-lifed as regular alkalines, don't have the memory of nicads, and are one hell of a lot friendlier on the environment when you finally have to dispose of them.

Yes, they are a pain in the ass in that they have to be recharged individually, but then again, alkalines have to be REPLACED individually, don't they?

>Please, could anybody explain the figures and levels of SINAD,
>compared to a decibels scale? What is level 0, etc.

0 dB SiNAD just means there is no signal to noise ratio that can be
measured.
the meter may bounce around a bit because of the effect of the 1 KHz
filter in
the meter. As the rf signal level is increased, the higher signal to noise
ratio in
the receiver translates to a higher "SINAD" reading.

nema@pcnet.com (Richard Lubash) writes:

I have been using Code Quick for about three weeks and find it much
better than the dit-dah or farnsworth method. The sound alikes let you
go from hearing a sound right to the letter or number as opposed going
from sound-to dit-dah-to the letter. Speed increases seem much easier
too.

It still takes work (every day is a must if you dont want to
backslide). I also recomend getting one of the shareware computer code
practice aids (I use morse Trainer on my MAC) and make cassetts from
the computer to play around the house and in the car for practice.

Lots of Luck

depends. some do, some don't (forget whether the Kissimmee/O'do area is on 103.5 or 107 something..)...UHF systems are PL'ed for sure.

however - if you've never been to the parks before and have the intent to just go see everything, i'd tend to recommend that you leave the radios at the hotel or behind...after a few hours that extra baggage starts to be heavy and you don't have to worry about losing it someplace along the way...

And I had a roommate while stationed in Germany in the '60s who would
come off duty at 1:00AM, turn on his FM stereo (this was in a room with
about 8 people.) I noticed that the station he was listening to was
near the high end of the FM band, plenty of room to tune a portable radio
under my pillow about 10 feet away to exactly 10.7 Mhz lower.....

I think we are in agreement on that point, testing for distortion.
I'm taking issue with the original poster's method of measuring
amplitude of the full-quieting tone, and using that as a baseline
for measureing SINAD. That would result in an invalid SINAD
measurement, since any distortion present in the FQ measurement would
be added to the baseline, and not measured as part of the SINAD check.

Absolutely sound advice. That is exactly what the Overbeck article will
show you. Not only that it is good to "work with" them first, but
that PRB-1 does NOT carry real power anyway, and to use it as a threat
is, in many cases, a paper tiger and can get you in deeper than you
might wish to be.

Good luck!

10-m is open!!! You just have to turn on your radio and have others
do the same.

I have worked the island of Aruba on both ten and six this past month.

The only people I hear complaining about the bands not being open are
those that never turn on their radios, so their will be someone to
contact.

This Thursday I made two contacts on 2-meter simplex, from a J-Pole up
20 feet. Louisiana and Texas... From St. Louis, MO.

F O R E S A L E

1. Kenwood TM241A 2m mobile, 5/10/50 watts, memory expansion unit
installed
- less than one year old, with manual, original box, mobile mounting
bracket, etc.
LIKE NEW!
Reason for selling: I'm moving to 70 CM.
These go for about $500.00 Canadian; make me an offer. I'm looking for
somewhere around $100.00 (Canadian) less then the new price, as this
radio is in great shape and hardly used.

2. Sony SW55: Portable Shortwave Receiver *Mint condition!*
- 125 memories
- 150 khz to 30 mhz continuous; plus FM broadcast band
- am/lsb/usb narrow/wide filter, extremely sensative!
Reason for selling: As a blind person I find this radio unnecessarily
difficult to operate, and want to move to a 2010.
- comes with carrying case, all accessories, manuals, etc.
I'd like $355.00 Canadian for this *firm*; also barely used.
I would provide prices in US currency, but I don't have a calculator
handy. If you're interested in either of these, let me know and I'll work
out the US prices.

I found five articles pulled from ham magazines in past years in my filing
cabinet that deal with making a programmer for these chips. The articles
say that a programmer for an 8223 will not program an 82S23, I'd guess
from the fact that the links are more sturdy and require more current to
blow them. All the programmers are the flip-a-switch-and-set-the-address
type of programmers, not run off computers like EPROM programmers
usually are, particularly for the larger chips.

>I appreciate any info about this!

If you want copies of the programmer articles I'd be glad to cut you copies.

Alan - WA6AWD - Kent, WA

1932. VEC/VE EXAM&CLASS SOCAL

Newsgroup: rec.radio.amateur.misc

I enjoyed several late night chats on the WDW repeater, mostly park employees. We were staying in the Wilderness trailers (a nice enough experience, but I'll be back on the monorail line next time) and even had some of the roadwarriors over in the airstream trailer park stop by.

However, there is no need for a n HT in the parks and, as the previous poster mentioned, it just weighs you down. Go & enjoy the magic.

>is on for aircraft frequencies), band 2 covers 300-400 MHz, band 3 covers
>400-520 MHz, and band 4 covers 700-999 MHz,

Sensitivity with _any_ antenna drops off substantially above 470 MHz. in that UHF band.

In the aircraft band, the AM mode (I don't think it's a true AM detector) switches on automatically.

: : Br> I bought mine used and don't know where a new one could be obtained.

: : I'm not sure where to get one either, but wouldn't you get a lot of
: : strange looks walking down the street, appearing to be talking to nobody?
: : Depending on your neighborhood, I guess this could be seen as normal
: : behavior, but I sure wouldn't do it.

I have one that I bought from a manufacturer in New England. They have ads in QST and CQ. It was about $39. Quality of audio both ways was acceptable, but my ear canal must be just a little smaller than the average person, as I could never get the thing to stay in my ear. It uses one of those earbuds like the Nintendo Game Boy. The PTT assembly can clip to your belt. I ended up buying a Yaesu lapel mike that at least would stay attached to my clothing.

A great item for the ski slopes , BTW !

1941. Panasonic RF-65b Rcvr mods info pse

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-11 00:00:00 UTC
From: mirkoc@mbox.vol.it
Message-ID: <483575$hhh@newsvol.vol.it>
Source record: 235661

Hi you all there,
I owe a commercial Panasonic receiver. Model is RF-65b. I can receive SSB from 3.8 to 26.7 MHz on the SW coverage (it goes also on MW and FM 88-108). During my last travel to Ireland I saw a receiver exactly like the one I owe, but the coverage on SW was 1.5 to 29 MHz, so I think the model I've got does not cover this wider range due to italian laws. So I think that with a simple modification (usually it simply is a diode, as TH-78 users know well...) I can let it cover this wider range. I have tried all the ways to find out how to modify it, but still today I have found no reply to my question! Could anyone of you help me to solve the mistery? Thanks beforehand. 73

Hello Gang,

I've got some key / bug restorations going and need a few parts to finish up.

1. Bunnell Gold Bug -- need the circuit closing lever and mounting hardware.
2. Signal Electric Semantic -- need the pendulum stop post.
3. Electro Bug -- need weights.
4. Levinson Radio "Like-A-Flash" -- need finger pieces, binding posts.

Would buy parts off your junkers or buy your junkers for the parts.

I am looking for old Vibroplex bugs for my collection. Also interested
in off-brand bugs, hand keys and pre-1920 telegraph instruments. Will
purchase or trade my duplicates. Email for my list of duplicates for trade.

GC>In article <Pine.OSF.3.91.951025125434.3437A-100000@unicorn.it.wsu.edu>
GC>Wigal <jwigal@wsunix.wsu.edu> writes:
>When I travel through some areas of Seattle, my radio is bombarded wit
>intermod interference (at least that's what I think it is)...
>I own a Kenwood TH-26AT with a hood-mounted 5/8 wave vertical antenna.
>usually run my radio out of my cigarette lighter.
>
> Is there anything I can do to filter this out? Is there any kind of
>circuit that I can make that will reduce this interference? The
>interference is not coming from my truck-- it seems to come when I tra
>in specific areas of the city.
>
>Any help or advice would be much appreciated! Thanks in advance...
>-Jeff Wigal

GC>Intermod is generated in a receiver when undesired signals mix in
GC>a non-linear device, usually the first RF amplifier or the first
GC>mixer. The problem is attacked by using preselector filtering to
GC>prevent out of band signals from entering the RF stage, a high
GC>standing current in the first RF stage to reduce its non-linearity
GC>under strong signal attack, the minimum necessary gain in the first
GC>RF stage, and a strong mixer design with a high intercept that's
GC>broad band terminated in a post amp with only enough gain to make
GC>up for mixer loss. (The bulk of the radio's gain should occur
GC>after the first IF filter.)

GC>Unless you want to redesign the front end of your radio, about the
GC>only practical approach is to use an external bandpass filter to
GC>limit out of band signals from reaching the receiver. Tucker Electronic
GC>Alabama Radio, and others now offer such bandpass filters. Typically
GC>they cost from $60-$110 and range in size from that of a small brick
GC>amplifier to that of a DB Products cavity duplexer. The larger units
GC>have less insertion loss (affects transmit as well as receive) and
GC>sharper skirts to reduce close in out of band signals. The Tucker unit
GC>is fairly small, and switches itself out of circuit during transmit
GC>so that its insertion loss, which is fairly high, doesn't hurt you
GC>on transmit, and actually helps during receive. The Alabama Radio
GC>filters are much larger and have a low enough insertion loss that
GC>you don't need to switch them out for transmit.

GC>Either of these filters will do wonders for reducing typical "pager
GC>crud", but won't help if the signals causing the problem are in band.
GC>In that case, you really have to improve the front end design too.
GC>Dr. Rohde has addressed the factors needed for a strong front end
GC>in a series of articles in QST, and in his book _Communications

GC>Receivers Principles & Design_. The big problem with this approach
GC>in a HT is that both the strong RF amplifier and the strong mixer
GC>require heavy current drains, which shortens useful battery life
GC>substantially.

GC>HTs aren't intended for use with good antennas, most don't have room
GC>for good filtering (and in fact are designed for out of band reception
GC>as a "feature"), and require minimum battery drain, so we have front
GC>ends that have low standing currents, no preselection, and way too much
GC>RF gain to make up for the rubber dummy loads that they are designed to
GC>use. Putting such a radio on a good antenna is a sure recipe for interm

GC>The best solution to this problem is to abandon the idea of using a
GC>HT as a mobile rig. Get a good mobile rig with adequate preselection
GC>filtering, a standing current of at least 100ma in the first RF stage
GC>(which should also have minimum necessary gain for the required system
GC>noise figure), and a high intercept DBM mixer requiring at least +17 db
GC>of LO drive (or a mixer using power FETs), and terminated with a strong
GC>wideband low gain post-amp.

GC>Unfortunately, the choices available are rather limited thanks to
GC>the unhappy tendency for the Japanese manufacturers to try to make
GC>their communications radios double as wide frequency range scanners
GC>while becoming increasingly tiny and offering low current consumption.
GC>Most of the suitable radios will be large trunk mount units which say
GC>Motorola or GE on the front.

GC>There is one current production amateur HT that is fairly intermod
GC>resistant. That's the Radio Shack HTX202. While it doesn't offer the
GC>high standing current in the first RF stage, or the strong first mixer,
GC>which would make it ideal, it does offer internal bandpass filtering
GC>and a modest first RF stage gain. (Most Japanese HTs have an absurd
GC>amount of gain in the first RF stage, exacerbating their already bad
GC>IMD character from lack of narrow bandpass filtering.)

Gary, I bought an ICOM IC2000H mobile. It has wideband receive but also
claims to have low intermod. While I certainly hear some intermod in
downtown Columbus, Ohio, it is pretty low compared to the desired
signal. What's your opinion of the design of this rig? Just curious
as you seem pretty knowledgeable on this subject.

-----BEGIN PGP SIGNED MESSAGE-----

F O R E S A L E

1. Kenwood TM241A 2m mobile, 5/10/50 watts, memory expansion unit
installed
- less than one year old, with manual, original box, mobile mounting
bracket, etc.
LIKE NEW!
Reason for selling: I'm moving to 70 CM.
These go for about $500.00 Canadian; make me an offer. I'm looking for
somewhere around $100.00 (Canadian) less then the new price, as this
radio is in great shape and hardly used.

2. Sony SW55: Portable Shortwave Receiver *Mint condition!*
- 125 memories
- 150 khz to 30 mhz continuous; plus FM broadcast band
- am/lsb/usb narrow/wide filter, extremely sensative!
Reason for selling: As a blind person I find this radio unnecessarily
difficult to operate, and want to move to a 2010.
- comes with carrying case, all accessories, manuals, etc.
I'd like $355.00 Canadian for this *firm*; also barely used.
I would provide prices in US currency, but I don't have a calculator
handy. If you're interested in either of these, let me know and I'll work
out the US prices.

Hello,
I am interested in a T.V. film about G.Marconi for a exhibition -
"100 years to Marconi "
any help will be appreciated.
Thanks,
Arie Avidor

Source record: 235771
Cross-posted to: rec.radio.amateur.misc,sci.electronics,rec.radio.swap

I have a Pathcom/Pace Landmaster 3 UHF synthesized mobile tranceiver that uses a N82S23N IC to store the frequencys for the radios 16 memory positions. There are two of these IC's, I think one for the transmit and one for the receive.

I would like to know what the pin out is for this device. It is in a 16 pin DIP. What kind of a device is this? Is it a PROM, EPROM, or something else?

Also, what kind of programmer is needed to burn one of these? I have access to a EPROM programmer, but it has the larger sockets. (IE for a 2716 EPROM).

I appreciate any info about this!

1954. Standard C508A Freq Range

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-11 00:00:00 UTC
From: vk8tk@ozemail.com.au
Message-ID: <480kon$9ng@oznet03.ozemail.com.au>
Source record: 235772

I just purchased the Standard C508A dual band HT and would like to know if anyone can tell me the receive frequency range for this radio. I recall reading this information in some publication about two months ago, but cannot remember which one. The owners manual just goes into the 2m and 70cm portions. Thanks in advance for any help. 73. Tony

MorseTrainer-US 1.1.1 is available by anon. FTP from nic.funet.fi in the
directory /pub/ham/mac/demon/

It's a great little application. You can have it send ascii text files,
random text or "lessons" (which you can set yourself) at whatever speed
you require.
Morsetrainer is a very nice, solid piece of software and, best of all,
it's free.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 NOVEMBER AND FORECAST FOR 12 NOVEMBER - 14 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 10 Nov
Daily Proton Fluence >1 MeV: 7.3E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.4E+08 (moderate)
X-ray background: A2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Nov 13 Nov 14 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Nov: 77/16

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 10 Nov
Learmonth 6 1212 2222
Fredericksburg 5 6
Planetary 7 5

Observed Kp for 10 Nov: 2211 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
12 Nov 8 Quiet
13 Nov 13 Unsettled
14 Nov 25 Active
COMMENT: IPS Geomagnetic Warning 29 was issued on 10 November and
is current for interval 14-17 November.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
11 Nov normal normal normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Nov normal normal fair
13 Nov normal normal fair
14 Nov fair fair-poor poor
COMMENT: HF conditions for mid-high latitudes are expected to
become degraded late on 14 November.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
11 Nov 5

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
12 Nov 5 Near predicted monthly values
13 Nov 5 Near predicted monthly values
14 Nov 5 Near predicted monthly values
COMMENT: Spread F observed at Hobart during local night hours.
Degraded HF conditions expected for southern region Australia
after 14 November.

To speed up initial satellite acquisition, many GPS units maintain the time and last known position when turned off. If you shut the unit off, moved it a few hundred miles, and then turned it back on, I can envision it getting confused in such a way that the types of positioning error you encountered could occur. It doesn't seem real likely, but I guess it could happen.

I second the reinitialization idea. It might work, and it's faster than a trip to the factory.

I believe that such a large move of location would only delay the first
position fix after switch-on by causing the receiver to start searching
for a constellation of SVs which is not overhead and receivable at the new
location. I can see no reason how it could cause a false position report.

Well, it was at one time initialized correctly, and for several months
has been giving "correct" (i.e., believable) readings. I suppose it
could have lost its initialization data. I haven't shipped it back
yet, so I'll try reinitializing it first and see what happens. Even
if this is the culprit, it's still a failure mode - there's no
indication that the initialization was lost or the unit realizes
anything is wrong.

In reply to the party who pointed out that compasses are "wrong"
40-50% of the time: that may be, but I've never seen one as far off
as this GPS was...

That's what *should* happen, if the firmware is implemented correctly.
But I've had Loran receivers which would do exactly the same sort of
thing if initialized to a grossly different position. You can't count
on the firmware authors having done it right. All software has bugs,
even mine.

I said: "I have a VIC 20 I want to trade for a IC-781" (how long do we have read thesre messages where some ham wants to trade his junk for something woth something).

From: KH2KQ@KA6EYH.#NOCAL.CA.USA.NOAM
To : K1OIK@KQ1K.MA.USA.NA

Hello Burt,

You actually got one of those VIC-20's you wanna trade?

I do not have a Icom 781, but I does have a Kenwood 950SDX - howsa bout dat?

Only problem is dat it am attached under the counter of a 36 foot motorhome. So if youse trade for da 950 youse gotta take the motorhome too. Its got a generator and only 123 actual miles. But the problem der is dat it am havin a dead battery and it can't start and it is in the driveway of my vacation home at the beach in Malibu - so youse also gotta take the house in Malibu if youse want the 950SDX.

Howsomever, there is a beach bunny and her girlfriend that said they would just die if I sold the Malibu house on the beach, so they come with the house and the motorhome and the radio.

If dat am OK, then weese got a deal!

Oh yeah, does the VIC-20 got a DC power supply with it?

By the by, if you hear of anyone who has a Kenwood TS-50 attached to a Mercedes 450SLC - I would like to trade a Radio Shack 202 for it!!!!!!!

The following messages were sent to me by a ham that is afraid to be identified beacuse of the torment most of you will put him through for having a different opinion. But it is how most young peeple feel (that is why they quit the hobby or never get in it). But you can keep thinking whatever you want and let ham radio die. Some say I send flames but I am not the author of below. I get lots of support and many messages like the ones that follow.

From: xxxxx@.xxxxcom
To: k1oik@ccsnet.com
Subject: You hate good news.
Date: Fri, 15 Sep 95 03:42:54

they like threats. they thrive off of it. i don't agree with everything you have said, burt. however, you are right on about several issues... one of them being the burping, farting, pants sagging in the crotch from too many handhelds on a waist that can't support them... i may carry a handheld, cellphone, and a pager all at once, but at least i'm not so out of shape that i have my pants sagging like they have a load in them. i stay somewhat in touch with reality... i liked the rabbit story. it made a pretty damn good statement... that's why they don't respond. many of them know that to take away code would allow intelligent people, people with more intelligence <gasp> than they are, into their little good ol' boys club.

no, not all hams that learn code are like what you described, only about i estimate 85-90% are like that, drooling with 10 handhelds on their belts looking like they're on some sort of mind-altering substance (too much rf overloading of the brain tissue). my group of friends and i all dress like we're the nightclub crowd for the underground scene... leather jackets with studs, some of us have half shaved heads (i'm probably one of the few that look almost normal), nocturnal, hang out on numerous 440 and commercial band repeaters, play paintball, get (raise eyebrows) exercise (i ride my bike at least 10 miles every other day), play sports once in a while, i love snow skiing, and take plenty of time out of the radios to go to the movies, spend time with my girlfriend (who just happens to like listening to the scanners with me once in a while to all the fire and pd activity), go camping, party...

seeing "young" punks like myself enter into the hobby bothers the oldtimer whiners and complainers on the local 2-meter boxes and the old fart elitist jerks that hang out on simplex on 144.245 around the valley

here, badmouthing everyone and everything that stumble across them on their commute home. i think my area has the largest population of INACTIVE currently licensed hams of just about anywhere. many of these people are interested in the "technical" aspects of ham, get their licenses, check into one of the local 2-meter high level boxes, hear all the old farts on all day pissing and moaning about colostomy bags, get dissillusioned and put their gear away in the closet. it's pretty sad.

they're so afraid that their little club will be "polluted" with fresh knowledge and arrogance to their little rituals that they lash out at any attempt to break the mold.

if you want to quote it, go right ahead, on one condition, DO NOT USE MY CALL LETTERS OR NAME OR EMAIL ADDRESS. i agree with the philosophies behind a great deal of your thinking, but i'm not going to put myself in a position where i get jumped on every time i respond or post in the newsgroup. i still find a few redeeming qualities in ham radio, and it is still (though more commercial communications / monitoring) my favorite hobby. i just happen to get exercise, prefer sex with my girlfriend over the radios, and eat somewhat decent food.

again, have fun with the quotes. just don't give me credit for them. i really have enough mail come into my mailbox on a daily basis without having to deal with drivel from some bloated cholesterol-laiden fuck who wants to discuss with me the merits of using a "bug" over a straight-key or trying to tell me how useless satellite communications are.

keep up the good work, burt. you're one of the few reasons i sti still read the newsgroup.

>name, the log wants to know THE name. Thus it is impossible for a ham to
>say "I would like to know YOUR name." A ham says, "What is THE name for
>the log?"

>Burt, K1OIK.

Burt,

If you looked closely at what is being said, you will see that one ham asking another ham's name for the log is entirely different than asking the ham for his or her name.

In the first instance, I am clearly stating as to why I want your name..I do keep a log of my contacts. Also this information can be used for sending QSL cards. All of this is quickly said by asking for your name for the log. However, I guess I could say "I would like to know your name because I am a nice guy,, I am keeping a log, and I might send you a QSL card". Hmmmm, seems a bit to much.

Hams are very personable otherwise you would not have FM voice, AM voice, SSB voice, or even ATV.

Ham operator Jokes:

1. What is the thinnest book in the world?
What hams know about women.

2. How does a ham take a bubble bath?
He eats beans for dinner.

3. What's a ham's idea of foreplay?
A half hour of contesting.

4. How can you tell if a ham is sexually excited?
If he's still breathing.

5. How many hams does it take to change a roll of toilet paper?
We don't know...it has never happened.

6. What's a ham's idea of helping with the housework?
Lifting his leg so you can vacuum.

7. What does a ham consider a seven course meal?
A hot dog and a six pack of beer.

I'm headed off to Comdex, the huge computer trade show and exposition in Las Vegas NV (Nov 13-Nov 18). I'll be there on behalf of my employer so they get to direct my time for the most part - but given some free time, I'll post some online reports of any neat technology that I run across. I'm hopeful to see some wireless data type systems being demo'd.

Anyway, you'll find the reports (*If* I can get online access and everything works out as hoped) at our free Ham Radio Online virtual magazine. Take a look at http://www.accessone.com/~vbook/hronline.htm (yep, missing the "l" for what are now obscure reasons).

Thanks and enjoy, 73,

Hi ,
There is a program WXMAN. It's a dos program for converting weather
faxes.
I don't remember where it came from...probably AOL. I have yet to test it
on the air but the demo sounds like what you would hear over the radio.
I have also used CWAVE for decoding morse but you almost need computer
generated code for it to translate with efficiency.
Good luck hunting for these...I'll try to find the location too.

Burt Fisher (k1oik@ccsnet.com) wrote:
: Ham operator Jokes:

Hi Burt! I really miss your *perspective* on amateur radio over there on
the RIME network.

: 1. What is the thinnest book in the world?
: What hams know about women.

I heard "Italian War Heroes" myself.

: 2. How does a ham take a bubble bath?
: He eats beans for dinner.

Yeah, I heard "How does a redneck take a......"

: 3. What's a ham's idea of foreplay?
: A half hour of contesting.

I heard "Brace yourself Martha"

: 4. How can you tell if a ham is sexually excited?
: If he's still breathing.

This one is very old......

: 5. How many hams does it take to change a roll of toilet paper?
: We don't know...it has never happened.

The version I head was "Men" and not just hams.

: 6. What's a ham's idea of helping with the housework?
: Lifting his leg so you can vacuum.

Once again, I had heard "men"

: 7. What does a ham consider a seven course meal?
: A hot dog and a six pack of beer.

Once again, I had heard "men".

Burt, you're gonna have to do a little better than this!

Cheers!

Andy

>---------------------------------46492684123405--

Burt:

Did it ever occour to you that meeting someone in person is differnt
than meeting them on the air? In my 15 brief years as a ham and SWL I
have never heard a conversation, amateur or commercial that resembled
one I would have with someone face to face.

I dont remember ever telling anyone I was talking to face to face that
their voice was just above the noise level.

Furthermore I dont expect my radio contact to use perfect grammar or
say and do the things I do in order to enjoy communicating with him.

By the way Burt, whats this got to do with building and experimenting
this is rec.radio.amateur.homebrew isnt it?

Regards,

Tim Hynde ka8ddz

Actually, neither of these is always correct. Jim is right that it's pretty damn rude to post "please e-mail me, I don't read this newsgroup"--One would think that they could put themselves out enough to at least follow the group for a few days and see what gets posted.

If the subject is something that (1) doesn't interest many people, or (2) is not likely to be the subject of much debate, then e-mailing the poster is probably the way to go. Something like "Does anyone have an address for the Frozbin Widget Co.?" would fall into this category.

If there's wide interest, but no likely discussion, a summary may be appropriate. However, many topics benefit from discussion, which is not served by posting a simple summary.

I've read a number of the netiquette materials, and I don't recall any of them saying that "e-mail the poster and have him/her post a summary" was the only acceptable method. Several authors, however, have suggested it as one alternative.

In this, as in most other aspects of life, anyone with the One True Answer is probably wrong.

.

Police radar is a sales tool. It is analogous
to the "testers" carried by water softener
salesmen and the computers insurance sales-
men use to show how under insured you are.

"Dukes of Hazzard" fans remember Roscoe
clocking cars with a hair dryer.

I'd go for the business band. You can even purchase used commerical
equipment at what is called a hamfest. Find some ham operators in you
neck of the woods and have them tell you when the next one is. You don't
really need to purchase new equipment for this.
Good luck
A.

WRONG! I think it's hilarious because its all so TRUE! Most of it is right on, I think we all have to admit to seeing those fat-crack-of-the-ass-showing-from too-much-beer-and-too-many-HT's.

Of course there will be those who want to post hate mail to him and disparaging remarks - this is the sure sign of taking an extreme position in response to someone else taking an extreme position.

Trouble is, Burt isn't being extreme!! He's just holding up a mirror to what we all know is a good portion of the ham community.... I've got the balls to admit the truth. Its a horrible thing to show some ugly opinionated old fart how he looks to the rest of us, but thats what Burt is doing. And the amount of ugly old
opinionated farts that he is stirring up is just testament to how true his material is. Take a good look at yourself, Ham-World (much of it anyway)... You are far worse than those that YOU criticise! I love it!

Thanks for breathing some life into these old farts, Burt!! More power to you.

Hello all,

I have gotten STSLPUS and a city file for it that has one city that is
about 25 miles away from me.

I am tring to find out my long and lat so I can plug that in to the
program. Does anyone know where I can find this info?

Also, Since the shuttle did not go up till this moring (SUNDAY)
Where can I get the 2 element file with the lift of and orbit paths?

Yes, I am new to this as you cn tell...

I have my 2M receiver setup on 147.45 simplex to here it.
But, Need the updated elements to get the closes pass to me..

Is there newsgroup or web/ftp site that has all this info?

Thanks....

1997. NO CODE 10 METER!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-12 00:00:00 UTC
From: herb@alpha1.csd.uwm.edu
Message-ID: <485ns1$e6j@uwm.edu>
Source record: 235616

Think about what having 10 meter priveleges would do for no-code hams!

10 meter gear is easier to build than vhf/uhf gear, 10 meter priveleges would let no-code licensees 'get their feet wet' in HF, while still reserving lower HF bands for Code licensees. This way, people will have a reason to learn code: To allow them to make more regular, more distant contacts.. Right now techs are unable to see how exciting HF is, and therefore are crowding the 2 meter band.
Learning code will be easier if people can have qso's before taking their code exam. The only code you ever hear on 2m is repeater id's....

If you'd like to contribute to this posting, please do so. Also:

Petitions:
Let's petition for 10m priveleges. organize local Amateur clubs, hand out fliers... WRITE the fcc. Talk to anyone, and EVERYONE... tell them what you think about the advantages of no-code 10 m, and let's see what kind of difference we can make!

73's,

Nate Gingras, KB9LSX

My telephone number is not my identity.

The Supreme Court of the United States has recent affirmed a person's right to remain anonymous. I support that decision, and would like to see how that can be reconciled with the FCC's rulings on caller id. I suspect the latter will fall.

In the meantime, I place all 800 number calls from a line which does not accept incoming calls. The people on the other end of the call may collect the number, but a fat lot of good it will do them to call back on it.

From: brian@nothing.ucsd.edu
Message-ID: <485ri1$7cv@news2.ucsd.edu>
Source record: 235619

Most repeaters don't repeat sub-audible tones because they aren't designed to. In the commercial world, either the tone is regenerated or is fed through via a special 'tone coupler' device.

You might find a repeater with such installed. They're rare though, especially on carrier-squelch repeaters.

It is highly inappropriate and against the charter of the group to post enormous binary images in this newsgroup. This is a text-based group.

If you MUST post them somewhere, put them in one of the miscellaneous pictures groups and mention it here.

Remember that a lot of people receive this group via E-mail, and they don't really want large image files in their mailboxes. Worse, many PAY for the traffic, so it's a double strike.

>Has anyone out there received satisfactory results with the Ramsey
>FX440 transceiver kit? ...I'm going to start troubleshooting
>the rig this week (I hope), and will keep any interested parties up to date.

I built one when it first came out a few years ago. No workee. I sent
it back to Ramsey, who made MAJOR modifications (the early boards
had a lot of changes from later ones, and mine was way early). Still
no workee, even after John Ramsey himself did the mods! It's now
shelfware. :-(

SB DX @ ALLBBS $OPDX.230
Ohio/Penn DX Bulletin No. 230

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 230
BID: $OPDX.230
November 12, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, W4MWT, KI6WF, N6ZS, K8LA, DL1VJ, DF4RD, DL8OBC, F6AJA, HB9BLZ, HS1GOS, I5FLN, PS7AB, PY2NY, VO1NA and G4BUE & The DX News Sheet for the following DX information.

3V, TUNISIA. A small team of three Rhein Ruhr DX Association members, Andy/DJ7IK, Hein/DL2OBF, and Felix/DL8OBC, will be active in the CQWW DX CW Contest. Operation will take place from the club station 3V8BB in Tunis and will be in the Multi OP, Single TX category of the contest. They will fly to 3V-land on November 22nd, and they hope to be operational one or two days before the contest (November 25 or 26th). They are aware of the fact that quite a few DXers still need 3V confirmed, so they will automatically confirm every QSO made with a QSL card via the bureau. If you can not wait for your bureau card, QSL directly to: Heinrich Langkopf, DL2OBF, Ritterstrasse 42, D-31174 Schellerten, Germany

5R, MADAGASCAR. Ray, 7P8SR, is going to 5R8-land after he leaves Lesotho (read OPDX.229) but does not expect to be active there until April of 1996.

5R8DS WRAP UP REPORT. Ben, PA3BXC, has supplied OPDX with the following information on his 5R8DS operation which is now QRT. The last operation from 5R8DS was Sunday, 29th October around 0800z. Ben states he enjoyed the tremendous pileups he had on all bands up to 28 MHz using the big 17 element Log-Periodic and the 500w amp borrowed from Yoshi, JH8CLU/5R8DL. He is back in Holland now and plans to spend time with his XYL, kids and answering the many QSLs cards that were awaiting his return from 5R8-land. Ben reports that there are 3k S.A., 40k N.A., 31k EU and 16k AS contacts. Ben says the following: "People enclosed too many dollars and IRC's. Though very kind of them, I wish only to be just compensated, not become rich because of other's mistakes. I need only 1 (one) IRC or one (1) dollar to cover my postage, so would encourage to do so, no matter what. I can put two QSOs on one card. Also letters without postage is no

problem, I will reply via bureau."

5Z, KENYA. Gerard, F2JD, who should be active now in Seychelles (S7), will stay there until the end of November. After his activity in S7-land, he will be in Kenya in early December and will stay for 10 days. Gerard hopes to reuse his previous call sign, 5Z4JD. Both trips are not DXpeditions. He is there for his work.

9Y, TRINIDAD & TOBAGO. Bernd, DL1VJ, will be going to 9Y4-land for this year's CQWW CW as a SO/AB entry. He will be active from Tobago Island (IOTA SA-009). He may possibly be using a 9Y4 callsign in the contest, which is presently not known yet.

CORRECTION! QSL Manager reported in OPDX.228 for TT8BP was incorrect. The correct one is: IK5JAN not IK5ANP.

CT3, MADEIRA ISLAND. The following stations will be active during the CQWW DX CW contest (November 25-26th) as single band entries: On 160 meters, CR9X operator Werner, QSL info DK8WF. On 80 meters, CT3FN operator Hermann, QSL info HB9CRV. On 20 meters, CR9U operator Siggi, QSL info DL2HYH. They will be active before and after the contest between November 16-31st, with activities on the WARC bands and 160/80 meters using the calls CT3/DL2HYH, CT3/DF5AN, CT3/DK8WF and CT3/DL4ZBI. If landing permission can be obtained and the weather permits a landing, the Ilhas Desertas (IOTA AF-046) will be activiated on November 18-19th. Call sign will be CT3FN/p and QSL goes via HB9CRV.

D2, ANGOLA. Valenty, YO3YX, is currently active from a UN hospital signing D2/YO3YX. He can be found on 21273 kHz between 1700 and 1830z or on 14226 kHz around 2030z. QSL via YO3YU. The DXNS reports YO9CWY/D2 is a United Nations operation and is expected to be active for several months on all bands.

DU, PHILLIPINES. The DXNS also reports Martti/OH2BH and Olli/OH0XX will be active from DU9RG's QTH as a multi-single entry in the CQ CW Contest. They may be using a special call sign.

DXAC NEWS. There will be a new DXAC Representative for the Southeastern Division beginning January, 1996. Bart Fay, K4CEF, from Huntsville, Alabama (who has been one of the major contributor of information for the OPDX Bulletin) will be replacing Bob Beatty III, W4VQ.

EI, REPUBLIC OF IRELAND. EI7M (East Cork Radio Group) will be active for the forthcoming CQWW CW Contest. They will be working all bands. QSL to EI6HB as follows: Denis O' Flynn, Ladysbridge P.O., Castlemartyr, Co. Cork. Ireland.

HS8, THAILAND (SPECIAL EVENT STATION). HS8SEA will be active during SEANET Convention at Ko Samui, Thailand, November 17-19th. Activity will be on lowband (especially 3.5 MHz), HF, satellites MODE B (AO-10, AO-13, All RS satellites) and with operations on CW, SSB, RTTY, PACKET and AMTOR. QSL information will be announced over the air. The SEANET Convention is sponsored by the Radio Amateur Society of Thailand under the Royal

Partronage of His Majesty the King (HS0AC, HS50A) and Radio Amateur Society of Suratthani (HS8AS). SEANET (South East Asia Net) meets nightly on 14320 MHz +/- at 1200z.

NEW QSL ROUTE. Jose, HP2CWB, informs OPDX that because of problems of mail theft, a new U.S. address will be used for incoming mail until December 31, 1996. Outgoing mail will be sent out using the regular Panamanian Mail Service. Please include a SAE with an IRC or greenstamp and mail it to Jose NG Lee, Disney International, PTY-201, P.O. Box 02-5275, Miami, FL 33102-5275, for QSL card request for HP1CWB, HP2DFU, HP2CWB/P, H92A, HP9I, 3F2C, H33C, HO3C and 3F0T.

NFL (No Fan Loyality). (EDITORIAL by KB8NW) I know this does not have anything to do about DX, but because of the many fans and Browns Backers through world, Cleveland needs your help to stop the Cleveland Browns from moving to Baltimore. GREED and DECEPTION by the owner caused the move of the team, NOT the fans. The city, which is noted for its rich 50 year Browns tradition and its unique and loyal fans, was tossed into a state of shock. REMEMBER, this could happen to your city. Complaints about the move can be FAXed to the NFL at 212-758-1742 or call the NFL at 212-758-1500.

PQ5 & PT5, MEL ISLAND (BRAZIL). Begin looking for this IOTA (SA-047) island located in the Parana State Group, December 1-30th. Activity will be on all bands using the following callsigns: PQ5L (CW) and PT5M (SSB). QSL via PP5LL, Jaime Lira do Vale, PO Box 08, 88010-970, Florianopolis/SC, Brasil.

PW2, BRAZIL. Vitor, PY2NY, will be active as PW2N during the CQWW CW Contest as a LOW POWER Class entry on 160-10 meters.

SPECIAL EVENT STATION. On 12th December 1901, Marconi bridged the Atlantic by receiving the first transatlantic radio message on Signal Hill in St. John's, Newfoundland. To celebrate the 100th year of radio, a special QSL will be made available to any amateur or SWL who works/hears VO1AA on 12th December this year. Please listen around 14030, 7030 (on CW) and 14300 (on SSB). VO1AA is a club station located within 100m of where Marconi heard the first transatlantic signals.
An award is being established for anyone who works/hears VO1AA on 5 or more anniversaries of 12 December from this year to the 100th aniversary in 2001. Further announcements will be made at a later date.
VO1AA and the awards are sponsored by the Society of Newfoundland Radio Amateurs. VO1AA also operates under the callsign VO1IMD on international Marconi Day each year.

VK9, FREDERICK REEF. Steve, AA6LF, states that his expedition to Frederick Reef, which was to start on November 5th as VK4ALF/9, was cancelled due to very stormy weather. This was to be a new IOTA number.

VK0, HEARD ISLAND DXPEDITION (UPDATE). Bob, KK6EK, reports the following: "This is not an official announcement, just a progress report. Ralph K0IR, who is still in Australia searching for options, will make a statement

after he returns next week. I have just returned from Australia, where most of the expedition team assembled to attempt to work out the problem with transportation to Heard Island. I'm afraid I don't have good news. What happened is that the vessel with which we contracted had been grossly misrepresented to us, and in fact could not possibly have made this difficult voyage. The owner, however, is refusing to refund our money, more than $100,000, most of which he has spent. It appears we were the victims of a deliberate scam, and it will take a protracted legal action to recover even part of the funds, certainly not enough, and not in time to go to Heard Island this season. During the past week, the team, supported by dozens of Australian hams and others, searched for an alternative vessel, making literally hundreds of contacts as far away as Singapore. There are plenty of vessels available, but without the funds lost on the first vessel, none is within our resouces. We have the permits, the gear (in Australia), and a vast network of support (including pilot stations, satellite phone, Internet communications, and a great core team). But we are at least $80,000 short of what is needed. Failing an angel bringing a financial miracle, we will have no option but to cancel the expedition."

YS, EL SALVADOR. Tom, K8LA, will be active as YS1ZTM from November 18-28th. Activity will be a CW operation. He has a R5 for 20-10 meters, but is currently looking for something for 80-30 meters before his departure. Tom states he will also be doing a low key operation during the CQWW CW Contest.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to one of the three following addresses: kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

Subject: Community Message Traffic Handlers Needed
Date: 12 Nov 1995 20:25:59 GMT
Organization: N. American Cntr. for Emerg. Comms.
Message-Id: <485l8n$o8f@blackice.winternet.com>

I am looking for fellow Amateur Radio Operators that are
interested in supporting their communities with Emergency
and Military Family communications.

Our volunteer network uses the internet as our main
intra-communications platform.

So if you have internet and would like to help within
your community by acting as a traffic point for your
community, I can use your help.

Please, look at our web site for more information at:

http://www.nacec.org

We are a fast growing organization and would like to
have greater Amateur Radio community participation.

.

I'm not a fan of Q signs for voice, and I think
CQ is pretty rare on repeaters except for net
call ups.

How about "This is XX#X calling any station"
or "This is X#XXX is anyone listening"?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 NOVEMBER AND FORECAST FOR 13 NOVEMBER - 15 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 11 Nov
Daily Proton Fluence >1 MeV: 8.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.3E+08 (moderate)
X-ray background: A1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Nov 14 Nov 15 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Nov: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled with active
conditions from 18-21 UT

Estimated Indices : A K Observed A Index 11 Nov
Learmonth 10 2222 2342
Fredericksburg 12 5
Planetary 7 5

Observed Kp for 11 Nov: 1212 1113
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Nov 10 Quiet to unsettled
14 Nov 15 Mostly unsettled with isolated active conditions
15 Nov 25 Unsettled to active
COMMENT: IPS Geomagnetic Warning 29 was issued on 10 November and
is current for interval 14-17 November.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Nov Normal Normal Normal
14 Nov Normal Normal Fair-normal
15 Nov Normal Fair-normal Fair
COMMENT:

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
12 Nov 9

Observed Australian Regional MUFs:
Near predicted apart from 20-40% depressions at Darwin 16-20 UT.
Sporadic E was present at Darwin 04-13 and 15-17 UT, Townsville
05-07, 22 UT and at Sydney 00, 07-08, 10-11, 14-16, 20-21 UT.
Spread F was observed at Hobart 16-17 UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
13 Nov 5 Mostly near predicted monthly values. Spread F may
degrade night communications at mid and high latitudes.
14 Nov 0 Near predicted monthly values to 10% depressed.
15 Nov -10 Near predicted monthly values to 20% depressed.
COMMENT: Frequencies are expected to become depressed after 14
November.

You prove my point that hams could give a damn about YOU they want your
name for the LOG so they can get an impersonal QSL card. Frequently I
hear hams on repeaters ask for a name FOR THE LOG, and not even a log for hams
there. Explain?

>Hams are very personable otherwise you would not have FM voice, AM voice, SSB
>voice, or even ATV.

From: rec@goodnet.com
Message-ID: <DHyKJv.36y@goodnet.com>
Source record: 235490

: > When the FCC gives the go-ahead, I would like to request a specific 1X3
: >callsign but I don't know if my Advanced ticket allows me to get a 1X3. Does
: >anyone have an answer?

Check the introductory section of the FCC Rule Book (the ARRL publication).
It shows the callsigns for each license class.

Group A
1x2 K, N, W
2x1 AA-AL, KA-KZ, NA-NZ, WA-WZ
2x2 AA-AL

Group B
2x2 KA-KZ, NA-NZ, WA-WZ

Group C***
1x3 W, K, N

Group D
2x3 KA-KZ, WA-WZ

If you have a Novice callsign, you can only get a callsign from Group D
Tech, Tech+ & General can choose from Groups C & D.
**Advanced can choose from groups B, C & D.
Extras can go from any group.

To answer your question, an advanced class licensee CAN get a 1x3.

: I am tring to find out my long and lat so I can plug that in to the
: program. Does anyone know where I can find this info?

: Also, Since the shuttle did not go up till this moring (SUNDAY)
: Where can I get the 2 element file with the lift of and orbit paths?

: Yes, I am new to this as you cn tell...

: I have my 2M receiver setup on 147.45 simplex to here it.
: But, Need the updated elements to get the closes pass to me..

: Is there newsgroup or web/ftp site that has all this info?

: Thanks....

For now use the file of the city close to you. 25 miles isn't all
that big of a difference really. For this and future Mir docking missions
just track on MIR since the shuttle is moving towards her. Orbital data
for the shuttle changes rather quickly on these missions.

Get on the shuttle elements e-mail list to keep up to date.
Send the message subscribe shuttle-elts
to:

listserv@ucsd.edu

Also, listen to 145.840....That's the amateur radio dowlink for
shuttle/Mir docking missions.

: Is it worth the extra $ for a 2/440 all mode rig?

While I would not put such an expensive rig in my car, I've had a lot of use out of my own VHF all-mode gear. Last summer I was lucky enough to catch a rare 2 meter sporadic-e opening, and I was able to work Colorado and New Mexico from my California QTH, on 144.200, using 25 watts of SSB and CW. Such openings on 2 meter FM are even much rarer.

From: barnaby@world.std.com
Message-ID: <DHyLs4.G8G@world.std.com>
Source record: 235494

I just swapped QSL cards via internet with WC0V for a QSO we had the other day. Just wondering... what with rising postal costs, etc, if this method might be acceptable. It was sure fun!

I used Micrographx Designer (Where I had the original artwork for my printed card), and created an overlay mask for the QSO info, exported it to a file callsign.jpg and attached it to email. Pretty simple.

As I read Section V Field Checking of QSL Cards , in the DXCC rules, an Internet-confirmed card would not be disqualified. Anyone read differently?

KC5LWF .-. . .- .-.. .-.. -.-- .. .- --

>Hams do not sexy pictures,

Well, I did send the most interesting. The two babes were from
the same ham. You are right about HAMS rarely sending bikini shots.
Out of the 100 SSTV pics I've received, only 5 were sexy shots.

I have been bashed for posting a binary, promise not to do it
again.

Someone should start a new SSTV newsgroup. :-(
I don't know how.

[snip....]

I think the first gentleman may have referred to passing CTCSS/PL/CG or DPL/DCS tones through repeaters, although "coded squelch" can certainly fit either DTMF or CTCSS formats (or any of the dozen pager formats for that matter).

As for CTCSS tones, most repeaters do not pass these through for one of several reasons: 1) most modern plastic radios lack adequate audio filtering to prevent the tones being *very* audiable and annoying through the speaker- especially consdiering that most of these same radios have fixed encode deviation levels of more than 800hz.
2) Some repeater systems are multisite (diversity reception, or 'split-site' with receiver and transmitter at different sites) and employ radio links that themselves use CTCSS or DCS for squelching. Filtering of the initial tone presented at the receiver is neccessary before tone is added to the link transmitter or nasty sounds occur, or worse yet the decoder becomes totally baffled and remains squelched.
3) If the repeater requires a single CTCSS tone to activate- passing the tone is of little use for selective calling: everyone uses the same tone! (And, no the trustee cannot reasonably add multiple tone decoders without serious expense or time, and a lot of excessive ratty wiring in the cabinet- plus this totally defeats the purpose of CTCSS's use as a co-channel interference minimizer).

A lot of repeaters (at least around here...) filter the tone after the receiver, and then reencode it directly into the modulator. That way there is a controlled 500hz deviation, no massive swings in deviation due to poorly maintained radios. A 4066 used as an audio gate works great for this, and of course can be activated by carrier activity on the repeater receiver or by

CTCSS reception on the receiver (or both!).

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 13/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 13 NOVEMBER AND FORECAST FOR 14 NOVEMBER - 16 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/010

GOES satellite data for 12 Nov
Daily Proton Fluence >1 MeV: 9.6E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.6E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
14 Nov 15 Nov 16 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 14 Nov: 073/010

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 12 Nov
Learmonth 6 2111 3222
Fredericksburg 05 12
Planetary 10 08

Observed Kp for 12 Nov: 2332 2231
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
14 Nov 15 Quiet to unsettled with the possibility of
isolated active periods late in the day.
15 Nov 25 Unsettled with isolated active periods.
16 Nov 30 Unsettled with isolated active periods.
COMMENT: IPS Geomagnetic Warning 29 was issued on 10 November and
is current for interval 14-17 November.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Nov Normal Normal Fair-normal
15 Nov Normal Fair-normal Fair-normal
16 Nov Fair-normal Fair Fair-poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
13 Nov 8

Observed Australian Regional MUFs:
Near predicted monthly values at all stations apart from 30%
enhancements at Darwin 19-21 UT and Sydney 18-19 UT. Sporadic E
was present at Darwin 00-01 and 05-12 UT, Townsville 01 and 04-15
UT, at Sydney 03-04, 07, 11-14 and 22-23 UT and Hobart 08-20 UT.
Spread F was observed at Sydney 16-17 UT and Hobart 09-17 UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
14 Nov 5 Near predicted monthly values. Sporadic E may be
present and spread F may degrade communications
at mid and higher latitudes.
15 Nov -5 Near predicted monthly values to about 20%
depressed at times.
16 Nov -10 Near predicted monthly values to 20% depressed.
Spread F may degrade communications.
COMMENT: IPS HF Communications Warning 28 was issued on 12
November and is current for interval 15-18 November. Predicted
depressions more likely in the southern Australian region.

I'm a bit surprised. I've been using a Garmin GPS40 for about nine
months literally all over the globe (Argentina, South Africa, etc..)
and _except_ for the less than useful altitude values never had a
problem. I do usually enter a guesstimate for the position (+/- a
degree or so) as I've found a cold re-start when you've moved more
than a few hundered kilometers takes forever. Actually, I was
pretty impressed a couple of weeks ago with the Garmin. We were
also using some sort of Trimble with the filar (?) antenna and it
took forever to come up with 3 or more satellites and would not do

so at all while driving faster than 20 or so kph. No such problem
with the Garmin (though holding it out the window at 100 kph on a
crappy Argentine gravel road is not so easy).

ken gibbs

PS Anyone know why REI sells the overpriced Trimble for $700+
rather than a Garmin or Magellan for $350-400?

Oh, I see, the self-righteous calling the self-righteous self-righteous.

I've only been an amateur radio operator for 18 years and I would have to agree with some of the observations. But amateur radio is not the people who participate, but the act of participating. Yes there are some bad apples, but in most activities which concentrate a group of individuals with a specific activity, such as talking to each other on the radio, this is bound to happen. Unfortunately, we are not all as perfect as we should or could be, but I didn't get into amateur radio to join some perfect elite group, I got in because I found being able to communicate over thousands of miles, with a make shift antenna and a relatively inexpensive radio, pretty cool. Other people probably got in for other reasons. Sadly, I think a vast majority of amateur radio operators don't even know what the FCC part 97 reason for amateur radio's existence is.

Don't let the bad apples spoil the excitement that can be found in amateur radio, there is something there for everyone (wives/girlfriends too).

Some of us would really appreicate it if you would take rec.roller-coaster
out of your follow ups. Is that too much to ask? It's questionable what
this has to do with anything, but it certainly has nothing to do with
roller coasters.

Thank you.

Here's an original idea here....

IGNORE THE ASS... KILL FILES ARE OUR FRIENDS

I added Burt to my killfile, and WHOA.. the number of messages my newsreader
thinks it has is about half what it was.

Now... if there is only a way of filtering out responses.

BURT,
Annoying, slandering, mean-spirited are all easy attributes
and you excel in every field. You occasionally kinda sorta
show some intelligence. Why don't you quit taking the LAZY
route of cross-posting, and instead narrow it to the respective
group.
If seeing the responses generated by your remarks fascinates
you, I'm sure somewhere in the halls of M.U. is a psychology
professor that may be able to help you.
Of course, practicing what you preach would be nice too !!!

Geez, don't give him a clue! I've got a killfile that zaps all postings to more than 5 newsgroups, since anything that widely crossposted is always a waste of time. I had idly wondered why all the Burt followups had dropped off my radar, but was mainly just happy that they had. (I happened to trip over your posting while experimenting with a different newsreader configuration.) Burt, *please* keep on crossposting, it really helps me out.

(BTW, I also kill every post with a subject in ALL CAPITAL LETTERS. They're also uniformly worthless. Funny how these things work.)

2064. About CW Proficiency

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-13 00:00:00 UTC
From: sabinw@crpl.cedar-rapids.lib.ia.us
Message-ID: <488dgd$imc@flood.weeg.uiowa.edu>
Source record: 235523

I have been operating CW since 1941 and I enjoy it very much.
But it is a fact that I have never been as proficient at it
as many operators that I have known personally. I have never
worried about that, I just accept it and go on. CW skill, and
operating skill in general (contests and the like) are just
aptitudes (and motivations) that different folks possess in
varying degrees. My thought is that each Ham should have an
opportunity to find out for himself how he feels about it,
and not have it decided for him by the policy gurus.

2065. Does YASME still confirm QSLs?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-13 00:00:00 UTC
From: ann@ifn.ing.tu-bs.de
Message-ID: <487reo$6pn@ra.ibr.cs.tu-bs.de>
Source record: 235524

Hello,

I just wonder if the YASME foundation still exists. I have been
trying in vain to get a QSL for the ZS9/W6KG (Walfish Bay) operation
in December 1990. I know that Lloyd Colvin passed away but have
they stopped QSLing at all? Lately I tried WA6AKK but up to today
no luck either. My letters have been sent in April and September of
this year and I received no reply at all.

My trouble is that I already had their QSL until I sent it to the
DXCC desk in Newington last year. My registered letter disappeared
somewhere between Chicago and Connecticut and I lost 42 "new ones".

So if there is anyone out there who can help me out with any route
or information on YASME and their QSLing please send me a note.

Thanks for any information, Uli, DL2HBX

P.S.: The addresses tried were
- YASME, P.O. Box 2025, Castro Valley, CA 94546, USA
- WA6AKK, address from the most recent QRZ CD-ROM

>Is it worth the extra $ for a 2/440 all mode rig?

Well,

Is amateur radio worth it? Anyway, my personal view is that an
all mode rig is not worth the extra cost, just get a ssb/cw rig
or transverter for serious VHF/UHF work. Other mileage may vary.

I think your attitude about wanting to learn CW is refreshing given the "I want the spectrun but don't think I should have to earn it" attitude. Have you looked into 2 meter CW? If you want to work DX there is plenty of it. Ask any local VHF/UHF operator about working scatter or EME. Both modes lend themselves very well to CW. Have you looked into the CW activity via one of the orbiting "birds"? Lotsa CW there as well.

Nice story Burt. When I was stationed at Keesler AFB in Mississippi
(as a student--I was a permanent party instructor later on there too)
many of the pingers would play their stereos at a few db's above the
threshold of pain.

One day I was walking through one of the dayrooms and noticed
something in a wastepaper basket that caught my curiosity. Someone
had attempted to put together an FM wireless microphone kit.
Apparently they were't very successful...so looks like they tossed it.

In comes Jim, finds kit, takes to room, notices parts missing but is
able to put together what is there. Jim pushes momentary button
switch and hears a strong "ker-thump" in his stero headphones. No
audio just a loud "ker-thump" He tunes to the same frequency as the
most popular FM radio station on the Gulf Coast of Mississippi. He
walks down the barracks hallway. Someone is playing their music
awfully loud (by Jim's standards anyway). Presses button....
KER-THUMP! Those 18 inch woofers don't like that. KER-THUMP!
KER-THUMP! KER-THUMP! Music is lowered, ker-thump goes away. Music
level is raised, ker-thump re-appears. Jim had much fun with his new
toy.

The day always comes that technical school is over and graduation is
the theme. Orders in hand, Jim shows the folks in the barracks the
reason their stereos went ker-thump for several months. As Jim drives
through the Triangle area of the student dormitories his final time on
his way to a new assignment, he hears someone yell to him, "I'll kill
you Martin!"

Twenty-two years later Jim is still alive. :)

: How about "This is XX#X calling any station"
: or "This is X#XXX is anyone listening"?

: NE0R

CQ is not conventionally thought of as a "Q signal" anymore than SOS is.

Calling "Is anyone listening?" Begets A: Why do you care?

I suggest that the depth of implied meaning in a CQ is the more effective
choice. Just beacause it's rare, doesn't mean it's wrong.

You folks HAVE taken the novice exam, right? You must have, at some point,
read the part about sending the FCC a letter explaining what happened to
the license being all you need to do for a replacement.

> Are Motorola HT-220 Handie-Talkies of any value for ham radio?

These handhelds used to be the envy of every VHF/UHF fanatic back in the early days of ham FM. However, their usefulness has diminished with the advent of the newer handy-scratchies; the Radio Shack HTX404 outfeatures a UHF HT220 many times over. The main advantage the Motorola has is ruggedness and battery economy (in terms of current consumption, not price).

If you already have one, and only hang out on a couple of channels, they work great. That, and they're repairable in case of a fall from a 100-foot tower.

There is a very fine information package available to MEMBERS of

National Motorists Association, 6678 Pertzborn Road, Dane, Wis-
consin. The shortcomings of the Radar speed traps, and the pirates who man them
are covered very well. there are several books on defending yourself]
in court, as well as a videotape with the process dramatized. If
you have been busted for speeding, this is a must. You have to send
in $150.00, as deposit and rental for a month, and you get back
about $125.00 upon return. I have read the package, and later bought the
books, and it's amazing how inaccurate these radar systems are, and how
the municipalities make use of them. It costs $200.00 per hour to
keep one cop on the street, so you can easily understand the incentives
for those robots to make trouble if they can't find it.

> block your anonymous calls, as most of us do.
>
>

Though I am beginning to respect the position of the pro-
caller I.D. proponents, I am still baffled by the assumption
that the only possible inconvenience will be to the "blocked"
caller and not to the person who has a device that rejects
blocked calls. The general attitude has been, "if you want to
talk to me then unblock (or never block) your line." Fair
enough, but what if *you* want to talk to me and I can't get
passed your screen? Perhaps it's important I return your
call and I am shunted off into the electronic dog house for
remaining "anonymous"?

This happened to a student of mine recently. He called with an
urgent request and left his number on my office voice mail. I
tried to call him back from home but was told by an automated
device that his line did not accept "anonymous" callers. I didn't
know how to unblock my line (and I wasn't inclined to anyway) so
I couldn't get through to him. So be it, I thought. Tough luck
for him. He missed out on an important opportunity. Like those
who rely on caller i.d., if you want to deal with me you do it on my
terms or not at all. It works both ways.

The telephone was once hailed as a technological means of bringing
people together. It's always had its downside (crank calls,
obscene calls, harrassment, and pesky salesmen), but the more
technology is added (automatic marketing dialers, computer phone
advertizing, caller i.d.) the more the phone becomes a source of
anoyance and fear and the more it becomes a means of keeping people
apart.

By the way, rights are inherent: you are born with them. They are
not "granted" by court rulings, FCC regulations, or by my ability

to block my phone line. Technology is not God.

>appropriate for this age range? I've got some ideas but would like to
>hear from you folks, too.

>Thanks,
> Dave Mensing, N2PSH, mensing@ess.mc.xerox.com

Dave:

Before you go any further, take a look at what you said. You are talking
5 hours total for the class. Decide what you wish to accomplish first.
This should help you avoid false starts. If you are only planning on
performing demos, showing a videotape or two and generally building
enthusiasm, then 5 hours should be more than enough. If you plan to work
toward licensing, then you may wish to think a bit about this.
Certainly, with study outside of your 5 hours, most kids could make it
through the novice and technician written elements. The question is what
to do during the 5 hours. You don't have enough time to both build
enthusiasm and assist in license work.

I wish you success.

Well, DAWG! Burt Fisher's jokes not funny?
Y'all must got rocks fer brains! Ah'z just finishin'
readin' some print outs of Burt's jokes while
relaxin' in the bath -- fartin' up a storm.
Makes like a freakin' hot tub.

Ye haw! Let's hear it for Burt's humor!

Butch Magee (butch@apollo.wes.army.mil) wrote:
: Awww, c'mon guys,...I was watching CSPANN last night and they passed a
: partial funding bill, therefore, 10Mtrs. will be up on occasion, partially
: open for short periods, mostly down because of Demon-cratic lobby. Only
: the push from the extreme religeous right (God), will get the band fully
: functional in about 4 years. Hang in there!

Personally, I don't care what the government does. I happened upon
some old surplus sunspots at a flea market last week, and I've been
having tons of fun working lots of former (now deleted) countries!
Trouble is, I can't figure out how to get a QSL back from them.
Anybody have any old mint 4 cent stamps???

I thought others might like to see what they could do with their
lowly SW radios, apparently I was wrong.

I will not post any more pics here.

2096. Re: Motorola HT-220

Newsgroup: rec.radio.amateur.misc

The newsgroup alt.binaries.pictures.misc is a better place to post the sstv images. The rec.radio groups should be for text posts and other small bandwidth posts.

So that you know.

True, driving 55 on most major highways is certanly dangerous. I've
tried it. Quite often I like to sit back and enjoy the scenery and do
the speed limit but found it just to dangerous.
As for getting fewer tickets with different cars, that is true. I often
break the limit in my teal green pickup and almost never get stopped,
but my sister with her red mustang going about the same speed on the
same
road and she gets tickets all the time

[[EXAMNT11.13 : 2353 in EXAMNT11.13]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number

provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special
application for persons seeking a Vanity call sign (as of
September 6, 1995, that form is not available -- send the ARRL/VEC
an SASE if you would like us to supply you with the form once it
becomes available).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90. For 1996, the fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

[[EXAMNT11.13W : 2363 in EXAMNT11.13W]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 7 to 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "VEC@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number

provided so that the VE Team is aware that you be attending
the test session.

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether
they be for the Reciprocal Permit for Alien Amateur Licensee,
Form 610-A; Club/Military-Recreation/RACES station, Form 610-B;
or Form 610 for Amateur Operator/Primary Station License. FCC
Form 610-R is a computer generated renewal form that will be
sent from the FCC (beginning September 1995) to licensees whose
license is to expire within 90 days. Form 610-V is the special
application for persons seeking a Vanity call sign (as of
November 13, 1995, that form is not available -- send the ARRL/VEC
an SASE if you would like us to supply you with the form once it
becomes available).

Several FCC forms, including Form 610, are available through the
FCC's fax-on-demand service by calling 202-418-0177
(request form "000610").

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at
860-594-0301. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1995 test fee is $5.90. For 1996, the fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

2105. all these posts gotta go

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: broehrig@admin.AUrora.EDU
Message-ID: <Pine.ULT.3.91.951114160258.5584A-100000@admin.aurora.edu>
Source record: 235448

What the heck is going on ? I thought that whoever was posting all that SSTV binary crap was going to stop, yet that is the first thing I see in the next digest. I am also getting tired of all the Radio Shack bashing and radar detector stuff.

2106. TRW Swap Meet

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: mlichtman@support.com
Message-ID: <9511142205.0V15802@support.com>

From: server@GRAFex.sbay.org
Date: Tue, 14 Nov 95 23:15:03 PST
Message-ID: <gate.sZaLeD1w165w@GRAFex.sbay.org>
Subject: HAM-server Information

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order UUDECODE.BAS or UUDECODE.C and UUEXE536.ZIP. Compile on your system then uudecode UUEXE536.ZIP. This is a archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

The 82S23 is a 256 bit bipolar PROM, 32 x 8. It is a true prom, meaning
once you burn those little fuses, you can't unburn them; you buy a new prom.

2113. ** Freeware logging & packet software for Windows

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: michael_mcamis@valley.net
Message-ID: <488mpg$ott@dartvax.dartmouth.edu>
Source record: 235550

Disappointed with your commercial/shareware logging or
packet software for Windows? Try XMLog, freeware that's
available on the Internet. XMLog provides a flexible set
of coordinated logging and packet features.

If you're using a Web browser, start at BARC's home page
(http://www.acs.oakland.edu/barc.html), pick "barc archives",
then "PC stuff" (even though it says MS-DOS only). Select
the "logging" directory and fetch xmlog123.zip

For ftp users, sign on to oak.oakland.edu with the userid
of anonymous and a password of guest. Move to the
pub3/hamradio/pc/logging directory and get xmlog123.zip

The oak archives can be very busy at times, don't give up
if you can't sign on right away. Let me know if you:
- want more info
- can't fetch the file
- want a diskette instead

Have fun...

>reason to learn code: To allow them to make more regular, more distant

I had a reason to learn code! To be able to operate on HF! It's not that hard. If someone is able to build/convert something to properly operate on 10m., they should be able to comprehend 5wpm.

>contacts.. Right now techs are unable to see how exciting HF is,

Sure they can... just listen to HF. It's a great way to learn code.

>therefore are crowding the 2 meter band.
>Learning code will be easier if people can have qso's before taking their

>Nate Gingras, KB9LSX
I was on your side once... asking why I had to learn this 'stupid' code. I did though, and it came as a surprize to me when I did. From there I went to 13 in a week or so. I'm not a CW fan.. I'm just someone who didn't give himself enough credit for being able to learn something new.
If you spend as much time in trying to learn by listening as you would in this petition bid you'll have CW down... at maybe 20 wpm... Good luck...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 NOVEMBER AND FORECAST FOR 15 NOVEMBER - 17 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: None

Observed 10.7 cm flux/Equivalent Sunspot Number : 075/013

GOES satellite data for 13 Nov
Daily Proton Fluence >1 MeV: 1.7E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.7E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Nov 16 Nov 17 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Nov: 075/013

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 13 Nov
Learmonth 4 2111 1212
Fredericksburg 06 06
Planetary 10 04

Observed Kp for 13 Nov: 1120 1211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Nov 20 Quiet to unsettled with isolated active periods.
16 Nov 25 Mostly unsettled with isolated active periods.
17 Nov 20 Quiet to unsettled with the possibility of
isolated active periods.
COMMENT: IPS Geomagnetic Warning 29 was issued on 10 November and
is current for interval 14-17 November.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Nov Normal Normal Fair-normal
16 Nov Normal Fair-normal Fair
17 Nov Normal Fair-normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
14 Nov 6

Observed Australian Regional MUFs:
Near predicted monthly values at all stations apart from 20-40%
depressions at Darwin 16-19 UT and 20% depressions at Hobart 12-15
UT. Sporadic E was present at Darwin 08 and 21 UT, Townsville
08-10 UT, Sydney 12-19 UT and Hobart 07-18 UT. Spread F was
observed at Sydney 15-18 UT and Hobart 12-16 UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
15 Nov 0 Near predicted monthly values. Spread F may
degrade communications at mid and higher
latitudes.
16 Nov -10 Near predicted monthly values to 20% depressed.
Spread F may degrade communications at mid and
higher latitudes.
17 Nov -10 Near predicted monthly values to 20% depressed.
Spread F may degrade communications at mid and
higher latitudes.
COMMENT: IPS HF Communications Warning 28 was issued on 12
November and is current for interval 15-18 November.

2120. TNC2 QUESTION

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: dws@sgfb.ssd.ray.com
Message-ID: <DI20pA.1Mu@ssd.ray.com>
Source record: 235557
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Hello,

I am in the process of rebuilding a TAPR TNC2
that was damaged by lightning last summer. I
have all the necessary parts and am in the
process of performing the digital loopback
test. Everything works perfectly until
I get to the step where I install jumper
jmp10 and short pins 4 and 6 of U20. This
is supposed to verify the operation of the
DCD circuitry from a digital point of view.
I should be able to connect to myself and
see the CON LED illuminate. It is not
happening. Again the connects of the
previous steps are working. I was
I am using TNC2 software version 1.1.7b
and the state divice is version 1.09.
The TNC2 software is an update from the
verion originally used when I build
the TNC. Could it be that I am missing
an errata from the update that modifies
this portion of the proceedure?

The troubleshooting section of the book is
not very helpful in this area. Any advice
or suggestions would be appreciated.
Thanks. Dave WA1UWU

Bryan,

Just hang out on your local 2M or 70cm repeater for awhile
I'm sure you will be able to pick up on all of the Q-sigs in a short
time :->

Failing this then e-mail me a message and I will get a list out to you
as soon as I COMPILE it....
You see I have to compile and print a list to decipher what the
REAL Ham Radio Operators are talking about while they
are on FM !!!!

Let me know if you still need the list and I will see what I can do

Good Luck

2132. Hamming in Las Vegas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: greg@core.rose.hp.com
Message-ID: <DI0xI0.7y8@icon.rose.hp.com>
Source record: 235569

Well, folks,

Here I am in Las Vegas attending the largest (?) geek show on the planet,
and not only don't I hear any repeater activity, I couldn't even bring up
any of the local repeater. Except one, probably barely, and only from the
26th floor of a hotel.

Is the ham community that dead in LV, or is all the QRM generated from all that
prototype equipment wiping out any chance of reliable communication?

Repeaters tried:
145.190-
145.300-
146.700-
147.090+ (got this one to ID once)

Also scanned 440 band; nothing.

None are listed with a PL. Did that change?

2133. Help with NLA mounts

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-14 00:00:00 UTC
From: curryds@craft.camp.clarkson.edu
Message-ID: <48ahnl$ldg@library.erc.clarkson.edu>
Source record: 235570

Does anyone have any experience with NLA mounts. I am putting one in in a week or so(with a little help from friends) and need to buy the thing. Larson seem to make NLA mounts that are advertized as "snap in". Is this the antenna snapping in? I want to have a permanent antenna on the roof all coax hidden in the headliner and such. I realize that NLA mounts only require a 3/8" hole instead of the larger hole for NMO. Is this "snap in" what I want? Thanks in advance

>above 30MHz.

Indeed. And the FCC has opposed changing that requirement in the
past, saying that the amateur community doesn't want it changed.
If the FCC gets a lot of requests from the amateur community for
change, it will be more likely to support changing Article 32
at the next WARC to address the issue, probably in 1999.

Nate,
I think it would be a good idea to give no-code Techs 10m. I also
would not be opposed to access to all H.F. bands for no code.
I think this will happen some day, but not for quite a few years.
People would be better off putting their energy into up-grading,
rather than fighting to get more privlages. It is really not that
hard! It is very possible to get your General with only a month
or two of study. Even less if you are really determined. All the
testing is really just memorization now. Even learning CW is just
a matter of memory. It used to be much harder, as you probably
have heard.
Great strides have allready been made to make it easier to get
more people into this hobby.
You have allready put the effort in to get your Tech license. All

it takes is a little more, and you will be a General.

Bob,

Yep I always get a chuckle when a Ham Radio Operator
of General class and higher will get on a voice repeater to say that
he/she is going to QSY or go QRT or use some other Q Sign/signal

Some of the q-signs that they come up with I have to get my book out to
look up..

Some days I get to laugh all the way home 50 + miles one way :->

who says ham radio is not fun !

==========

George,
I had a novice call (WN9LFZ) during the early 70's. I went 20
years before I got back in again.
I used the Gordon West code tapes.
I got my Tech-Plus in March 93, and by October 93 I had my Extra.
You will be surprised how fast the code comes back to you. It's
like riding a bicycle. You never forget. Good luck.

On most providers, and many in-house phone networks, there is no option
to "disable" the block.

10 meters isn't very exciting either at this part of the sunspot cycle.
Getting privileges on the lower end of HF would be better. How about
full privileges on any amateur frequency below 3.7 MHz? And lets throw
in 30 meter privileges as well. At those lower frequencies, equipment
is even easier to build, and the chances for Dx contacts are greater.

>Learning code will be easier if people can have qso's before taking their
>code exam. The only code you ever hear on 2m is repeater id's....

Well not exactly, but certainly there isn't much CW activity in the
FM portions of 2 meters. Get down below 144.1 MHz, however, and that's
all you'll hear. (It's one of the only two Morse exclusive band segments
in amateur radio. The other is at 50.0-50.1 MHz, which Techs can also
currently access.)

>Petitions:
>Let's petition for 10m priveleges. organize local Amateur clubs, hand out
>fliers... WRITE the fcc. Talk to anyone, and EVERYONE... tell them what
>you think about the advantages of no-code 10 m, and let's see what kind
>of difference we can make!

Pestering the FCC is good because they currently claim that there's
little support among the amateur community for changing the Morse
test requirement at HF. A flood of petitions can change that perception.
Pestering the ARRL is also good. But all this will require time because
before any changes can become effective Article 32 of the ITU regulations
has to be changed and that isn't scheduled to come up again before 1997
at the earliest, and more likely 1999. Getting the FCC and ARRL to support
changes to Article 32 has to be the first step.

Not true. The propagation gods don't care if you're running SSB or FM,
they'll let your signal through anyway when they're feeling generous.
SSB offers a SNR advantage when conditions are marginal and signals
are hiding very close to the noise floor, but they aren't marginal
during a band opening. FM even has the FM enhancement effect going
for it so that if you're above threshold the signal quality will be
better than SSB. The problem is that FM operators usually are parked
on their favorite repeater output and aren't trying to make DX
contacts so they miss many openings.

[snip]

IMHO, this whole thread has snowballed to the size of a house. A telephone
is a duplex communication device. If you want to communicate, lift up the
receiver. If you dont wish to communicate, then dont! Its that simple.

I too became victim of a 'anonymous caller' blocked number. My office phone
is part of their own network, and 'id' as anonymous to caller ID boxes.
This guy that wanted me to call him, had 'anonymous call' blocker on, and I
got the recording telling me to "..unblock..". Since I was unable...I did
not call him. Later he called, and wondered why I didnt call him. I informed
him why, and also that I thought it was HIS fault...not mine.

Again IMHO, people with caller ID are either paranoid, deadbeats, or both.
Its VERY easy for me to say to a tele-marketing rep, "Thanks for the call,
but Im not interested." and promptly hang up.

Source record: 235584

Bill, KC6YOX asked:

>>Question doesnt Japan have a no code license with
>>hf access? 10 watts
>>bill

Yes, they do. It allows low power (I think your figure of 10W
is correct) voice operation on some small slices of a couple
of HF bands (75 & 15??).

Their rule is based on the idea that at such low power the
operation is "national" (no DX) and thus avoids conflict
with the international rule.

The equipment manufacturers love it!

I bought one shortly after I bought my HTX-202. I like mine quite a bit. It works well on my HTX-202 and my girlfriend's Icom O2AT.

I've seen other vox headsets at HRO near Portland, OR. but they cost twice as much as the one I bought at Radio Shack.

The VOX headsets at HRO might be better constructed though.

I tend to agree with Drew. I don't have any bill collectors calling, but
don't care to have my time wasted with telemarketers. Most are trained in
high-pressure sales, and often saying "I'm not interested" isn't enough.
Besides, they are invading my privacy and my family time.

As I said earlier, my solution to the problem is an answering machine with
two voicemail boxes. The phone simply doesn't ring. Yes, it annoys some of
my friends that they have to go through the screening process, but they do
understand why it's necessary.

Well, if you owe money, a bill collector is most certainly an unwanted
call! <g> I agree...there are some who use Caller ID for this purpose...
but I would venture to bet that the majority of users are not "deadbeats",
but rather, honest people who don't wish to have their time wasted by
unwanted telephone calls. What's wrong with that? Sure, they can keep
calling until the cows come home...and I will continue to not answer.
Eventually, they'll get sick of talking to the answering machine.

You might tell your student that he/she "lost out" by their use of Caller ID. Then, let him/her decide. Sure, these things happen...but the benefits of ID'ing or blocking unwanted calls highly outweighs the negatives. If it was a REALLY important call and you REALLY didn't want your number divulged, you could've called from a payphone.

>I've used NLA mounts since the 60s. Like others, they work well when
>installed properly. However, Larsen claims to be getting out of the NLA
>business. I have no idea, and its very disappointing.

There's a very good reason. With the thinner sheetmetal on today's cars, NLA mounts tend to pull out with the slightest impact. Even wind loading of 5/8-wave 2m antennas can cause distortion of the sheetmetal, as a friend of mine recently discovered. You want to use the NMO mount instead. It clamps over a larger area and spreads the load so that sheetmetal distortion is reduced.

The NLA was a fine mount in the heavy sheetmetal of 60s and 70s vintage cars, but with today's recycled beer cans, it just won't do.

>is correct) voice operation on some small slices of a couple
>of HF bands (75 & 15??).

I think you'll find them on the voice portions of all the HF bands.
The 10 watt power limit is correct.

>Their rule is based on the idea that at such low power the
>operation is "national" (no DX) and thus avoids conflict
>with the international rule.

Actually, the Japanese took a footnoted exception to the Morse
test requirement in Article 32 (allowable under ITU rules). The
reason for the low power limit has no connection to that. The
reason is to keep down RFI interference to consumer equipment
in the crowded home islands. You'll find a lot of Japanese
operators working DX when propagation is favorable. I don't
believe there was any illusion of low power making the signals
national in character.

>The equipment manufacturers love it!

Indeed, over 2 million licensed. You'll probably note most
Japanese equipment is really 10 watts with an added amplifier
to boost it to 100 watts for the American market. Their VHF/UHF
equipment is 10 watts too, which is why some of it overheats
in the American market version where a higher power PA has
been shoehorned into a box too small to have adequate thermal
dissipation at the 45 to 50 watts Americans demand.

: designed to. In the commercial world, either the tone is regenerated
: or is fed through via a special 'tone coupler' device.

: You might find a repeater with such installed. They're rare though,
: especially on carrier-squelch repeaters.

It is becoming more popular for repeaters to transmit a sub-audible tone of their own if they are carrier access. Several repeaters around the St. Pete/Clearwater area do that.

Some of the 440 repeaters that require a tone, transmit the same tone. Several repeaters around here have had a squelch tail elimination modification (done on Motorola Micor radios) that utilize transmitting a tone.

>
> >When I travel through some areas of Seattle, my radio is bombarded with
> >intermod interference (at least that's what I think it is)...
>
>>>>

Another method of reducing RX intermod is to attenuate the received signal. IM products will be
reduced by the actual attenuator value multiplied by the IM product order. That is, a 6 dB pad will
reduce a third order IM product by 18 dB. (Refer to Bell Lab's "Intermodualtion Interference in Radio
Systems" for more info)

Power attenuators that can simply be placed between the transceiver and the antenna can be purchased fairly inexpencively from Bird, Trilithic, and others. (Experiment with variable attenuator,
then buy a useful value rated to handle your TX power.)

Ditto. I've only been a ham a year and a half, but use (and overuse) of Q signals on voice (2m & 70cm in my case) drives me nuts.

Shortly after my son and I received our tickets in June of '94, our family left on a cross country vacation (Illinois to California). This gave both of us, but especially my son (who was 12 at the time), a great opportunity to use my new 2m mobile and get some on-air experience. As we traveled, my son would get on the air and say "N9XDD listening, and looking for contacts." He got 'em...enough to fill several pages of a logbook.

Just another reason it was a great vacation.

Let's see if I understand Burt. You attack almost every one and if someone suggests protesting it you then threaten them. Make about as much sense as you usually do.

If my kids were in your school district I would be concerned about your obsession with sex, perhaps someone is.

Perhaps with all the spamming it is time to protest to your system managers maybe even with some samples of what is going out over their connections. If every user who is sick of your crap did that your access would be a fleeting memory.

All of the above are simply observations; suggestions or perceived threats are in the mind of the beholder.

I was in New York last weekend, and I listened in to some of the Marathon nets. They were all well run, but one thing stood out. I heard almost no callsigns. I listened to the South net (446.67) and the medical net (445.07) for about an hour on each. Net control gave a general net ID, along with his call at the top and half of each hour, and stations ID'ed when they were excused for the day, but for all of the other calls into the net, I only heard tactical calls.

I am just curious where people were ID'ing with their own callsigns? The only thing I can think of was that people were IDing without PL and therefore the IDs weren't picked up by the repeaters. I am used to the final message in a qso with ncs to include both tactical and FCC calls (station 12, N1IST clear).

I guess you don't have to read any posts that either offend
or bore you. If you use a system that digests everything into
one big post, perhaps you ought to change systems. In any event,
you world is not going to change just to make you happy.

I have the same problem with a piece of gear that I stored in my
basement for five years.

The only solution I know of is to strip it and then either have it
sandblasted (to remove the rust) or use naval jelly and sandpaper.
Finally, fill the pits and imperfections with Bondo, sand it smooth,
and have it sprayed.

Just don't ask me how to Bondo a perforated cabinet. I haven't gotten
that far yet. :)

Message-ID: <harris.pander01.46.30AA47AC@ic1d.harris.com>
Source record: 235413

I have an old piece of radio gear that I'd like to restore. The insides of the unit are no big deal to fix. The main problem is that the panels of the steel case have a lot of surface rust, from 15 years of storage in a coastal Florida garage. When I buff out the rust, I expect to have a pitted surface.

Perhaps some of you out there are experienced at sheetmetal repair... What should I do to end up with a "like-new" finish?

: Ok Jim, but wont those people continue to call back? They sure do at my house.

If you mean my friends, or others to whom I have given my number, yes, they do call back. I tell them in advance that they will always get the machine, unless they plan to call back right away, then I flip the ringer to "on." Otherwise, their instructions are to talk for a few minutes, and I will pick up if at home.

As far as telemarketers, they may call back, but they will always get the machine. Not one has ever left a message, which would not be returned, anyway.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 15/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 15 NOVEMBER AND FORECAST FOR 16 NOVEMBER - 18 NOVEMBER

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 077/015

GOES satellite data for 14 Nov
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.1E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
16 Nov 17 Nov 18 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 16 Nov:
077/015

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 14 Nov
Learmonth 5 2222 1111
Fredericksburg 5 5
Planetary 7 3

Observed Kp for 14 Nov: 1101 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
16 Nov 6 Quiet to unsettled with the possibility of
isolated active periods.
17 Nov 6 quiet to unsettled
18 Nov 6 quiet to unsettled
COMMENT: IPS Geomagnetic Warning 29 was issued on 10 November and
is current for interval 14-17 November. The active levels
expected 14-16 November, looks like they will not eventuate.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
16 Nov Normal Normal Normal
17 Nov Normal Normal Normal
18 Nov Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
15 Nov 9

Observed Australian Regional MUFs:
Near predicted monthly values at all stations. Spread F was
observed at Sydney 9-18 UT and Hobart 10-18 UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
16 Nov 10 Near predicted monthly values. Spread F is
likely at mid latitudes.
17 Nov 10 near predicted monthly values
18 Nov 10 near predicted monthly values
COMMENT: IPS HF Communications Warning 28 was issued on 12
November and is current for interval 15-18 November.

Ne> Think about what having 10 meter priveleges would do for no-code hams!

Give them another place to use a microphone?????

Ne> 10 meter gear is easier to build than vhf/uhf gear, 10 meter
Ne> priveleges would let no-code licensees 'get their feet wet' in HF,
Ne> while still reserving lower HF bands for Code licensees. This way,
Ne> people will have a reason to learn code: To allow them to make more
Ne> regular, more distant contacts.. Right now techs are unable to see how
Ne> exciting HF is, and therefore are crowding the 2 meter band.
Ne> Learning code will be easier if people can have qso's before taking
Ne> their code exam. The only code you ever hear on 2m is repeater
Ne> id's....
Ne> If you'd like to contribute to this posting, please do so. Also:

For the most part 10 meters is open N/S propagation or to the
west coast. Gee that's why I spend time on HF(satire intended <G>).
CW is only a stumbling block if you choose to let it be a stumbling block.
If a new tech is having difficulty finding out about how exciting
HF is, he/she needs to be elmered either in a radio club or
by a more 'seasoned' ham. Giving away privileges is much the
same as welfare.....if you don't earn it you don't appreciate it!

Ne> 73's,
Ne> Nate Gingras, KB9LSX

Good luck Nate....before jumping though to change the entry requirements
try teaching someone else what you have learned. Give a man a fish,
feed him for a day....teach a man to fish, feed him for a lifetime.

Then the solution is simple, don't block your number in the first
place. Do you have something to hide? Do you make harrassing calls?
Why would a business block their number?

There is also a distinct difference between an intentional block and
the system simply not being able to provide the number. Remember, only
an intentional block is blocked by the caller i.d. box.

>
>I too became victim of a 'anonymous caller' blocked number. My office
phone
>is part of their own network, and 'id' as anonymous to caller ID
boxes.

My office is part of a network that will provide the i.d. when I call home. Second, if the phone making the call has not deliberately block the number, but only not supported the caller i.d. function, the display on the receiving end will say "out of area." These calls are not blocked by automated devices. The automated rejection feature will only block a call that has had the caller i.d. deliberately turned off. It can be turned off on a per call basis, by the phone company when you have an unlisted number, or by a company that deliberately turns it off at their PBX.

>This guy that wanted me to call him, had 'anonymous call' blocker on,
and I
>got the recording telling me to "..unblock..". Since I was unable...I
did
>not call him. Later he called, and wondered why I didnt call him. I
informed
>him why, and also that I thought it was HIS fault...not mine.
>
If you look in your phone book, you can get the code sequence to disable the call block. It is just as simple as dialing a few number before dialing your number for a per call block.

>Again IMHO, people with caller ID are either paranoid, deadbeats, or
both.
>Its VERY easy for me to say to a tele-marketing rep, "Thanks for the
call,
>but Im not interested." and promptly hang up.

It is not being paranoid to ask those that call you to be identified. Plenty of telemarketing companies call, and as long as they are not intentionally blocking their numbers, we take their calls. There is

something funny about a company that calls you on the phone and does not want you to know where they are calling from. Seems like a possible scam. What caller i.d. has done for us is stopping the harrassment calls. If you call as a joke, we'll know who you are.

I've used NLA mounts since the 60s. Like others, they work well when installed properly. However, Larsen claims to be getting out of the NLA business. I have no idea, and its very disappointing.

The mount is what snaps into the 3/8" hole. The antenna screws onto the mount.

I know of some dealers who have decided to boycott Larsen because of their decision. You might check around and see who else makes an NLA antenna. I think Maxrad does, and is what some are switching to. It's too bad, because Larsen is the best antenna around, IMHO. :)

Really people - we are talking about 5 dinky words per minute. My buddy's seven year old picked it up in about a week. I think given a fair shot my little pussycat could do it.
I don't know, maybe we should reduce the speed requirement to 3 wps.

>Nate Gingras, KB9LSX
For one thing you'll probably have an easier time trying to get 5wpm
in code instead of waiting about 5-7 years for the ITU to even
consider this. If you want to stay no-code but want a little DX, try 6
meters CW and SSB you'll get the experience of HF and you might be
able to work on your code at the same time.
ITU rules say:
An amateur operator must have a code requirement given by its country
to operate below 30 mhz.

Anyway 10 meters isn't all that great unless there is a contest for
the next 2-3 years until the sunspot goes up

From: jds@neptune.net
Message-ID: <48bujf$eau@neptune.neptune.net>
Source record: 235466

Well, I got my answers to my request for the 'correct' 6m SSB calling
frequency. The votes are in:

50.110 1 (europe)
50.125 6
50.150 0
50.200 1

So, it looks like 50.125 is the most popular. Listen for me there!-)

Thanks to everyone who took the time to answer!

Cecil, you might want to pass along a reminder to your co-worker:

The national headquarters Communications Group of the American National
Red Cross strictly enforces the ANRC policy of compliance with the FCC
rules; this includes Type Acceptance of all radio equipment used on ANRC
frequencies. "483q96$190g@chnews.ch.intel.com" is seriously jeopardizing
his ANRC status as either volunteer or professional staff. At the same
time he puts at risk both the ANRC local chapter radio license and his own
amateur license. The IC706 does NOT meet the FCC's technical requirements
and is not permitted by ANRC.

I wasn't aware of that, and I agree, testing at a few other
frequencies would improve the quality of the test. However, EIA SINAD
is defined only at 1 kHz. There aren't many manufacturer's specs out
there for anything but SINAD measured at 1 kHz.

>This leads to an idea for amateurs with outboard DSP boxes with

I don't have any real experience with DSPs, but would it be possible
to measure the quantization noise separately, and subtract it from the
result?

He said, "called station", not "calling station". Why is it so dumb? If the guy he called actually did answer and was not hitting the repeater, maybe he would like to know he is not being heard!

Many, many times I have heard somebody come back after "Nothing heard" was said. The usual problem was the called (not calling) station had his radio on simplex and was not going through the repeater. (Gee, I thought that was said above)

Saying "Nothing heard" might also clue the guy that maybe he is not using enough power, or maybe his speaker mike was not firmly inserted, or maybe he is just out of range. Maybe he needs to spin his beam around to hit the repeater, or take the rubber duck off and use the telescopic 1/2 wave antenna.

Why is this so dumb? Maybe we shouldn't say it and let the "called station" (not calling) figure out for himself what is wrong. Maybe that will teach him a lesson next time.

Steven, there are people out there running 1200 baud and paying by the minute to download everything posted to the newsgroup. Some don't have UUDECODE. It is just common courtesy not to ask people to pay for things for which they have absolutely no use. Collectively, those binary postings cost millions of dollars - they were not worth millions of dollars. My daughter barely has enough money to afford the base rate for her account. She doesn't know where she is going to get the money for the overtime charges that those binary files cost her.

David, David , David,

Think about what you are saying below....
or has rf finally fried your brain?

I know very that he could RECEIVE SSTV with a Tech PLUS Ticket!
I receive SSTV all the time using my ICOM 735 and VieWport SSTV equipment
on HF.. Check it out and I'm a NO-CODE TECH

Now transmitting.. That would be a problem.

And another thing Dave, Looking at your Sig. lines
you must need to take some more classes at MUT
I would hope that they have a course in common sense.

Have a good day QBH

Very funny, but dont forget a VERY LIMITED anount of bandwidth, and,
5 watts legal max.

This is true...but I see a serious problem with the international treaty rules here. Consider:

You cannot obtain a license and operate legally on 10-meters without passing a Morse code test...but yet you can go into any truck stop and, relatively inexpensively, purchase a radio and amplifier for outband 11-meters that will allow you worldwide contacts with basically the same propagation characteristics and no need for either Morse knowledge or licensing of any kind. Yes, I know that it's illegal...but the reality is that several thousands of operators can be heard there whenever the band is open and nobody seems to care. Question: wouldn't these operators be much more inclined to make the transition to legal, licensed operators if the Morse requirement was eliminated?

Sounds like the Japs need to take a crash course in "Propagation 101!"

I have talked around the world with 5 watts out of my car. The reality here is that the Japs have once again pulled the wool over our eyes and created a no-code class of HF license!

2220. Re: Repeaters masking tones

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-16 00:00:00 UTC
From: Chris Boone <72732.2610@CompuServe.COM>
Message-ID: <48e0pm$jj1$6@mhafn.production.compuserve.com>
Source record: 235339

MOST rptrs cannot pass PL tones because they use the Mic input
and rcvr audio outputs which are deemphasized and neither can
readily pass PL tones (below 300Hz)...

Some rptrs systems like Cactus, Armidillo, Texas Rptr Network,
etc pass tones thru the rptrs unchallenged....thats because the
rptrs are using flat audio (which is superior since the rptr
doesnt CHANGE the users audio at all) and have no freq limit in
the low end...

73
Chris
WB5ITT

(PS DTMF is a security issue in most cases...but PL or tone coded
squelch is not)

}In article <47r7nf$4a@lambchop>, Ron Thompson <ron.thompson@wfnia.com> wrote:
}>I was recently experimenting with code squelch on some local
}>repeaters. I found that ALL the repeaters I tried fail to
}>transmit the tones. I thought code squelch would be great to
}>facilitate quiet standby, but it's going to be pretty much
}>useless if it doesn't work through repeaters.
}>
}>Does anyone know why this happens? Are there any ways around
}>it?
}
}Somebody will do this explanation better than I can, but here goes:
}Most of the control functions of the repeater are activated using
}DTMF (Touch-Tones (R)). Such things as autopatch, link control, and
}repeater site status info are examples. If the tones were also sent
}on through, it would be awfully easy for "kiddies" to start using them
}for mischief.
}
I think he his talking about CTCSS - the sub-audible stuff, refered to generically
by the Motorola trade name, PL.

Repeaters will indeed filter this out. The receiver and transmitter each
have 300Hz High-pass filters in them. It is possible to make modifications to
allow this, but it is up to the owner of the repeater.

*** The Cuban Adventure ***

The story of the CO0OTA IOTA NA-204 DX'pedition
(23 May 1995 - 29 May 1995)

When I first becomed to know what IOTA was, I couldn't imagine what was waitting for me, two persons have to be blamed to put me into it, CT1ZW Julio and our dearest late friend Cesar CT1UE (a Silent key now), since then a lot strange things had happen thru my life, I had actually the luck of marry an HAM radio girl,but I never thought my honey-moon was going to be spend at an IOTA DX Convention in Torremolinos in Spain !!!, mother-in-law never understood that very well, but she also doesn't understands why Iam always talking to a box with a lot of lights and knobs....! Anyway,this avid passion for the IOTA Program made me taste for the first time the DX'peditioning flavour of being a DXer, before IOTA was on my blood I always wanted to go on DX'pedition somewhere to one of those most-wanted DXCCs, like Midway, Palmyra or Bouvet, but those were always out of the range of what my bank account could afford, so I decided to try something diferent and get into the IOTA business, I tryed the taste of Insua Island1 EU-150, tryed Culatra Island EU-145 and even tryed some other Portuguese Islands for the CT1 Islands Award program, I was really happy by being on the other side of the Pile--up, but something was missing !!! What could it be ??? Well, as usual, almost every day some of the Portuguese IOTA chasers meet at 20.30z. on 3755 to change Info and the last news from Islands activation, in one of those nights the well known Cuban Islands DX'peditioner Luis CT1ESO was there and told me " hang-on Josi Iam going to make you a phone call !! " what could he want from me, I thought... and then the magic words come up " Do you want to come with me on the next IOTA Dx'pedition to Cuba, its going to be a brand New-one for the IOTA ", well I thought, what the heck, Iam going....even though I had to request permission to my HAM but Portuguese wife !... She understood (its not every day that one finds a wife as understanding as this, HI !), only one condition " You are going only for the DX'pedition, not to make a big party with your friends ", I imediatly agreed, couldn't be any other way ! I was getting excited about the idea, I knew spite of the place that we where going, Santa-Maria Key on the Sabana Arch., be a most-wanted to everybody on the IOTA program (never have been active before),Cuba was also wanted as a DXCC on the Lower bands, WARCs and above all on Satellite. Written permissions, Licences, all needed paperwork was being dealed by the Cuban HAMs, Don Pedro Rodriguez and Arnaldo Bandrich from the " Federacion de Radioaficionados de Cuba ",they were giving a precious hand on the Cuban side and above all by getting our Diplomatic VISAS to get into the Country, oh yes , forgot to say, all antennas were also being made by Cuban HAMs, all Monobanders,they also provided a 1 Kw Linear-amp.,so we didn't have to worry about extra weight when checking in the Airport, thats what I thought, before I felt the weight of both cases in my arms ! Luis Gomes (CT1ESO) was

to be the European Coordinator and started to assemble all the TEAM, 2 Spanish operators (EA5BYP Elmo and EA5YN Vicente, our fast CW man), 2 Italian operators (I0SNY Nicola, for the low bands and Satellite and I8IYW Pino) and 2 Portuguese (myself and Luis), all the 3 Nations that made the effort and helped discovering Cuba and America (after the Vikings discovered Newfoundland off course) back on the 15th Century were now represented, " the spirit of Columbus was there " ! Cuba also had assembled a great and big logistic TEAM with some of their TOP Dxers like, Juan CO7KR,Carlos CO6CG and Arnaldo CO2QQ. We also tryed to have some British operators,but none was avaialable for that date.My task was now to establish an InterNet connection with Cuba, to keep always in touch with Don Pedro Rodriguez (telephone bills are hard to pay and mail to Cuba takes an eternity to get there),I was also in charge of getting some Commercial sponsors for a Financial help,to be true not many Portuguese HAM Radio comercial dealers or institutions know what DX really is, and if they have to help an International effort like a DX'pedition or a fellow that goes to the top of the hill for a 2 meter band operation, I can tell that their first choise will be the 2 meter band !!!, luckly for us one company got interested " Gitei Comunications ", and they should be, as they represent Kenwood for the Country. (I know Yaesu is the oficial sponsor for the IOTA, but Yaesu Portugal very kindly refused to help us). Well, it didn't matter anyway as all equipment was going to be Kenwood. So, everything was set, Elmo booked all the flights and I had to join Luis at the Portuguese border down south Portugal, as we had to go to Sevilla and then to Madrid for the flight. It was quite something, I had to carry the Kenwood TS-850 and the Power Supply in a case and had another with clothes and a second Power supply, what made quite a weight. For the worst I had to make a ride of 600 Kms by bus to join Luis down south, but I was rewarded with a couple of days of rest before the ride again to Sevilla and then to Madrid by Train, where we had to met with the Spanish part of the TEAM in the Airport.This was the point where Murphys law striked, having 60 Kg of luggage myself (I think everybody had the same weight each), the limit was 25 Kg each person,seemed not to be a problem at the check-in, they forgot to check the weight as we were very late to catch up with the airplane, so far so good, we just had to get the tickets at the branch and for it we had to have the VISAS in the passport, but there were none, " the VISAS where lost in its way to the Cuban Embassy in Lisbon and we have no VISAS " said Luis and on the other side a voice said " I am sorry Gentleman, but you can't go to Cuba without VISAS, its impossible ", -what !!!!, I didn't travelled by BUS, van, train, foot, etc... with all that weight to get back home again, there was always a second choise and that was to convince the officer to let us go without the necessary VISA and deal with the problem in Cuba,it wasn't an easy task, because he kept on saying that as soon as we arrived we were going to be send back again, he mighted very well be right, but after a phone call he let us go... I did never found to where he phoned,but it worked out !!!, Luis, our coordinator was very cool about all the situation at all times, so I thought he knew something that we didn't ! I was right!I was going to find it soon enough, when we arrived at the Varadero Airport.On the arrival Don Pedro Rodriguez was kindly waitting for us, I say kindly because he was waitting us there for many hours, the arrival hour that they got in Cuba of that flight was slightly different than the real one, but anyway,

NO VISAS....., were our first words..., he said NO PROBLEM, I will get you Touristic Visas instead !!!, great, lets get the luggage, I felt pretty lucky then.Something was missing though, wheres the case with the TS-850 and the power-supply, just hoped they didn't got in the wrong Aircraft and were sent to Reykjavik in Iceland or to Tibet, everybody was already at the costums showing everything they have bringed, but I was still waitting for the Radios and above all the Oporto wine bottles that were also there, HI ! Well, for the first time in my life I can say that X-rays don't like Radios or either wine and not long after I found that imigration officers wanted to ask me for what did I need that kind of equipment there, but luckly somebody told them that I was not 007 James Bond, I was an OK fellow, even a member of the local Fishing and Golf Club and above all I wasn't as pretty as James Bond was, neither I was going to smuglle wine !!!
At last I could rest for a night at the Hotel, while waitting for the Italians that were suppose to arrive the next day.
We had again quite a distance to make from Varadero to the Island, some of it by Bus, so, as soon as I0SNY and I8IYW arrived we hited again the road, a couple of stops to refuel and then again, we were in a rush, the Cuban TEAM was already there waitting for the Europeans to arrive and when we did I was surprised, I thought I was going to work out in the Antennas, but they had already did it, 160,80 and 40 meter Dipoles, 2 el. beam to 20, 4 el. beam to 15 and a 6 el. beam to10 meters, also the WARC bands beam, Satellite and VHF were up, all we had to do was plug in and transmit.
The Island was a paradise, the kind that you usually see on those movies about the Caribbien, just a difference, it was even better because there was nobody there, spite of the people that worked in some constructions, you see no tourists at all, Kms of beach only for you and for the sharks and lobsters !, the Cuban operators made it perfect, so nothing would be missing and made us felt like at home, never felt home sick, what I usually do when Iam abroad !!!I did got my expresso Cofee everyday, I was happy !Well, back to work, after the Group Photo, Luis started the Pile-up with the usual " QRZ this CO0OTA ", it was incredible all world was waitting for us on 14260 ,incredible enough was that lots of people still needed a QSL card from Cuba for the DXCC.
It was really great to make people happy with all those " 59s " and IOTA chasers with the " 59 on NA-204 ", oh yeahh, forgot to tell, NA-204 was the reference given by Roger G3KMA to this New-one for IOTA.
Bands were as we would expect, with great openings on 20.
80 and 40 were a bit noisy but workable, I remember one morning I called on 3799, the band was clear, conditions were good, but nobody was hearing on the other side, how could that be... strange, then a 59+ voice said " This is CT1BH you are 59 ", well propagation was working with Europe, but everybody was sleeping or doing something else, well I thought, its time to take a nap now !!!After we gave it out for IOTA, everybody concentrated on the Low bands and on the WARCs, we knew Cuba was needed there for DXCC.

Nicola I0SNY also made quite an amount of Satellite QSOs on Mode A and on Mode K, he even tryed 144 Mhz but he wasn't lucky, no Tropo or Sporadic E conditions to the States. Vicente EA5YN made it out with high-speed CW, think he made about 800 QSOs. All in all, the DX'pedition worked 5000 QSOs

and DXCC from Cuba.Outside the operations we had time enough to get to know each other, Juan Emilio CO7KR even showed us that he can sing and play the guitar, by playing a couple of Cuban songs.
I almost got eated by a Barracuda when I was swimming in the warm waters and also spotted some friendly crabs with big claws that you must watch out if you have to do something in the bush.I never liked fish, so,the Barracuda didn't want to eat me, probably thought I was too skinny, and would rather wait for Luis to have a big lunch that day !!!
By the way QSL this operation via CT1ESO, its a great coloured photo QSL card.See you next time on another IOTA....

Jose de Sa CT1EEB/CO0OTA

Some news of possible interest re Hamfests:

>There is a Hamfest to be held from 16-17 November at the island resort of Koh Samui in Thailand called"SEAnet" (Southeast Asia Net)=
Of interest is the fact that Motorola is a major sponsor of the event and is launching an amateur radio called the AP-50. The Thai=
equivalent to CQ magazine featured it this month on the front cover. The handheld is available at two meters and 60 centimeters. Th=
e attendees are expected to be from 10-15 Southeast Asian countries to participate in the event. The last year's event was held in M=
alacca, Malaysia.

>Let me know if you would like addtional details.

You can polish out shallow pitting with finer and finer grades of
sandpaper. If you have some really deep pitting, then use body
filler to fill them in. Just use enough so that a final sanding
gives a smooth surface, then paint.

How do you figure that? It's a valid telemetry function, no different
from an over-temperature alarm, or a cabinet entry alarm.

If you have to ask, no, it isn't worth it. If you _need_ one
for satellite work, then you need one.

Sorry, don't know how to fix that problem, but run an HTX-100 myself
and curious as to what type of mod you were doing?

My radio seems to perform well beyond my expectations and has for
years! The only mod was to install a switch, rather than press the
code key to tune up to the antenna!

Yes, it was RKO. The Morse code is the same as the text that appears around the trademark. I think is says "AN RKO PICTURE." If you can copy code, listen next time. Even if you can't normally copy as fast as it's sent in the film, you can still copy it because the text prompts you.

More Morse code trivia: At the end of the credits during the last episode of the Ken Burns' series "Radio," you hear a Morse code message that says "BASEBALL NEXT." This, of course, was the name of the nine part (inning?) series that appeard on PBS a few years later.

Can someone tell me how I can locate a callsign for a young man I am elmering. He was told at the testing session that he could call the FCC and get his callsign. Does anyone know the scoop on this type of thing????

2237. GB2RS News 19th November 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-16 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <816577469snx@llondel.demon.co.uk>
Source record: 235356
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 19th of November and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

RSGB members are reminded that completed ballot papers for the Council election must be received at RSGB HQ by 12 noon on Friday the 24th of November. The ballot form was printed in the Annual Report which was sent to members with the November RadCom. Any member who did not receive the Annual Report should contact John Davies at RSGB HQ on 01707 659015 tomorrow, Monday the 20th, to request one.

Members are reminded that, in order for their vote to be valid, the envelope containing the ballot paper must have the member's name and callsign on the reverse. This is to ensure that the person voting is a member of the Society and that only one vote is received from each member.

A reminder that the RSGB Annual Meeting takes place at the Royal Society of Chemistry, New Burlington Place, London, on Saturday the 2nd of December. Doors open at 12 noon and an RSGB book stall and buffet lunch will be available. The Annual General Meeting starts at 2.00 pm and members are asked to take their membership card along as proof of identity. Full details, including a map, are given in the Annual Report.

A new GB2RS broadcast starts on Sunday the 3rd of December from the station of G1ZCW near Louth in Lincolnshire. The transmission is on 70 centimetres, channel SU21 at 10.00am. Although initially the broadcasts will be made with low power, this is an excellent site and is expected to give wide coverage. Reports either to G1ZCW or to the GB2RS Manager, Ian Kyle, GI8AYZ, would be much appreciated.

RAIBC Northern Ireland wishes to acknowledge Ian Smith, GI0VSG, for running in the Dublin Marathon to raise funds on its behalf. The marathon was completed in 3 hours 31 minutes. Anyone with sponsorship is now requested to forward it to RAIBC NI, Marathon Appeal, Freepost BE1769, Belfast, BT15 3BR.

Now some items of HF DX news from the weekly RSGB DX News Sheet, which is edited by Chris Page, G4BUE:

Next weekend, the 25th and 26th, the CQ World Wide CW Contest takes place, and many contest DXpeditions are planned for this coming week.

From the Maldives, G4ZVJ and G4RWD will be active as 8Q7VJ and 8Q7WD from Tuesday the 21st of November until the 3rd of December on all bands, CW only. Check these frequencies: 1827, 3503, 7003, 10107, 14027,

18077, 21027, 24897 and 28027 kHz, listening up. In the contest they will sign 8Q7VJ.

From Aruba, Wayne, N7NG, will be active on the WARC bands outside the contest and on 10 to 160 metres during the contest, as either P49V or P40V.

From Principe island in Sao Tome and Principe, S92PI will be active from Wednesday the 22nd of November until the 4th of December on CW, SSB and RTTY, including an entry in the CW contest next weekend.

And from El Salvador, K8LA will be active as YS1ZTM between the 18th and 28th of November, including a "low key" entry in the contest.

Now news of a special event station this week:

GB0KIN will be operating on Friday and Saturday, the 24th and 25th of November, in order to raise money for the Children in Need appeal. The station, which is being operated by members of the Mid Sussex Amateur Radio Society, will be located at the indoor shopping centre in Burgess Hill town centre, and all visitors are welcome.

Next the Rally News:

The Bishop Auckland rally takes place at the Newton Aycliffe Leisure Centre today, Sunday the 19th of November. Doors open at 11.00 am, or 10.30 am for disabled visitors. The event includes an RSGB book and information stand.

The West Manchester Radio Club will be holding its winter "Red Rose Rally" at the Horwich Leisure Centre near Bolton next Sunday, the 26th of November. For further details contact Albert Davies, G7RZW, on 01204 62980.

The Bridgend and District Amateur Radio Club Rally also takes place next Sunday, the 26th of November, at the Bridgend Recreation Centre. RSGB Morse tests will be available on demand and candidates are reminded to take two passport-size photographs and the appropriate fee. Doors open at 11.00 am, or 10.30 am for disabled visitors. Talk-in will be on 2 metres channel S22. For further details call Maurice, GW0JZN, on 01656 864579.

And a note for your diary: on Sunday the 3rd of December, the SDX Support Group will be hosting an Amateur Radio and Computing Rally at the Maryhill Community Central Halls, Maryhill Road in Glasgow. There will be two lecture streams and a large RSGB presence at this event north of the border. More details will be given in future GB2RS broadcasts, or you may contact Raymond James, GM4CXM, on 0141 942 6657.

Now for the HF contest news:

We know of no HF contests today. Next weekend, the CQ World Wide DX CW Contest takes place for the full 48 hours of Saturday the 25th and Sunday the 26th of November. Operation can be on all bands from 160 to

10 metres, excluding the three WARC bands. Exchange an RST report and CQ Zone - the UK is in Zone 14. In last year's contest, G4BUO was fourth in Europe in the single-operator all band category. GB4RF - operated by G0SLY - was fourth in Europe on 21MHz. GD4UOL was sixth on Europe in the low power all band category. G4OBK was the third European low-power station on 28MHz, and GI0KOW was third in the world in the 1.8MHz low power category. Congratulations to all these stations.

Next some VHF contest news:

And we know of no VHF contests either this weekend or next weekend.

And now the solar factual data:

Due to problems beyond our control, some data is incomplete this week. The period from the 6th to the 12th of November saw solar activity at very low levels, and the geomagnetic field at mostly 'quiet' levels. Sunspot numbers increased slightly, with a mean of 14. Solar flux also increased slightly and peaked at 78 units on the 10th, with an average of 76. No solar flares of any importance took place. The X-Ray flux remained steady at A1.2 units from the 6th to the 8th. The 90-day solar flux average on the 12th was 75 units.

Geomagnetic conditions declined from active levels, with an Ap index of 22 units on the 6th, to quiet levels, with an average of Ap 11 units. The aa indices, as supplied by the British Geological Survey for the period from the 31st of October to the 6th of November, saw levels decline from 42 nanoTeslas on the 1st, to 12.3 nanoTeslas by the 3rd. Levels then increased to active conditions again, with 38.5 nanoTeslas by the 6th. The average for the period was 32 nanoTeslas, about K3.

I'll repeat the figures: spots - 14, flux - 76, Ap index - 11, X-Ray flux - A1.2.

Now the ionospheric data for Central France: The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 3rd to the 6th of November, saw levels increase dramatically from 6.2MHz on the 3rd, to 8.6MHz by the 5th. The average for the period was 7.6MHz. The darkness hour lows averaged 2.7MHz, and increased to 3.1MHz on the 5th, but then declined to only 2.4MHz on the 6th. The daytime highs took place between 1000 and 1200 hours, and the darkness hour lows at 0600 hours every day. Openings to South Africa were reported on the 28MHz band on several days, and were particularly good on the 8th.

I'll repeat the figures: highs - 7.6MHz, lows - 2.7MHz.

And lastly the solar forecast:

As the quieter side of the sun rotates into view this week, solar activity is expected to be at very low levels. Solar flux levels are expected to decline to the low 70s. Geomagnetic activity is expected to start the week at unsettled levels, but it is to be hoped that activity will decline to quiet levels for the rest of the week. Ionospheric MUFs

for the south during daylight hours are expected to be about 22MHz, and about 19MHz for the north. The darkness hour lows are expected to be about 9MHz. North / South paths are expected to be the best and should peak around midday.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Whisky Papa and G7 Victor X-Ray series, and Novice calls in the 2 0 Alfa November and 2 1 Echo Papa series.

2239. Voice modes

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-16 00:00:00 UTC
From: pruth@ocvaxa.cc.oberlin.edu
Message-ID: <48gch8$e9u@news.cc.oberlin.edu>
Source record: 235358

Even though SSB uses some bandwidth (like this post!) it's
good to have a reasonably efficient mode that conveys the
subtlety of the human voice, something that can't quite be
delivered any other way. Voice delivers more than information
and data: it conveys the essence of the individual, the
personality, the *quality* of the person. Being able to
telecommunicate *quality of mind* is worth 2.3 kilocycles of
bandwidth. This is a great and valuable privilege indeed.
Here's to the future of amateur radio, and to the propagation
of good will everywhere on this planet, all for a modest
initial startup cost, otherwise absolutely free... --Bill KB8USZ

He did. He got rid of his caller i.d. device

> If it was a REALLY important call and you REALLY didn't want
> your number divulged, you could've called from a payphone.

Now you've got to be kidding! It's for my students to contact me,
not the other way around. I return their calls as a courtesy only,
and that courtesy does not extend to calling from a pay phone.

The same thing goes for anyone else. Either answer the phone when I
call or forget it!

3A - [Monaco] There have been some illegal operations from Monaco
3A2LZ said that the 3A2CC and 3A5OA have not been issued and
have been active ... Look out for Pirates .
8S - [Sweden] SK3BG ,Suindsvalls Radioamatorer, will be active until
the end of this year with the call 8S3BG for the celebration of
the Club's 50th aniversary.
9Q - [Rwanda] EA1FH is in Kigali where he's active with the call 9Q5FH.
CQ - [Portugal] The expedition announced by the CQ5MEG group was abort
and it's planned to be in late November.
FT - [Kerguelen Isl.] FB1LYF will stay in Kerguelen Isl for one year
where he will be using the call FT5XL.Expected Modes of Operation
are CW , SSB and RTTY.
HG - [Hungary] HG100R is the special call for the celebration of radio
centenary.This call is active until 31 December 1995.
ZL7 - [Chatam Isl.] From 21 to 28 of November WB8YJF and K8PYD will be
active as ZL2CW and ZL7PYD in CW , SSB and RTTY.
QSL via : ZL7CW->WB8YJF , ZL7PYD->K8PYD.

NORFOLK ISLANDS -> Where was VK9FN for the Frederick Reef operation ???
He was in no special island , he was in Norflok Isl ... VK9FN is Sr.Siegfried
(DK9FN) ! Hi 8-) ...

HEARD ISLAND -> BAD NEWS !!! The Heard Isl. DXpedition was aborted due the
bad security conditions of the rented vessel ... 8-(!
Anyway they still looking for solutions but they already spent much money in
this vessel . All contributions are welcome to trie once again the Dxpedition
to one of the Most Wanted countries in the World .
Possibly next try will be in January 1996 ...

ZF2DX QSL Route -> The Florida Contest Group reports that there QSL Manager for ZF2DX operations has changed , K1KNQ does not handle more QSL cards the new QSL Manager is KG6AR.

NPDXG DX Cluster -> The Northern Portugal DX Group installed this week an experimental DX Packet Cluster running in the Aveiro area.
The call is CS1NDX and for now is only working on 144.625 Mhz but we expect to link it to the European PacketCluster Network.

>licensed operators if the Morse requirement was eliminated?

Ham radio as rehabilitation? Nowhere in 97.1 can I find as one of the reasons for the existence of the amateur service "to lure lawbreakers into legal, licensed operation". Besides, you can find extra-legal operation in many different parts of the spectrum other than 11 meters. Whatever our standards, they should exist to further and improve the amateur service, not as bait for our 11 meter friends.

}By the way, SINAD is not a great measurement of the actual usability
}of a receiver, since it only tests distortion at one frequency (1
}kHz).
}
}Brian WA1VUT

The modulation frequency has nothing to do with it. The idea is that the modulation will find all sorts of ills in the receiver. With modulation added, the signal now occupies more of the receiver passband. Nonlinearities in the filters (i.e. - a cracked crystal filter), a skewed IF, the radio off frequency, detector problems, audio amplifier problems will all add distortion products to the SINAD measurement, lowering this ratio. So the radio may pass the 20dBQ test with flying colors, but fail for SINAD measurement.

: >you think about the advantages of no-code 10 m, and let's see what kind
: >of difference we can make!

: You're a few weeks too late. The WRC-95 World Radio Conference apparently
: debated this issue and decided that, for now, the amateur community would
: continue to require proficiency in Morse for operating privileges below 30
: MHz. Unless the US is to abrogate the treaty under which we participate in the
: WRC (not likely, since it requires an act of Congress, that can't even get a
: budget passed), the FCC's hands are tied.

Not true. The debate that was momentarily considered at WRC-95 was the
acceptance of the Government of New Zealand's proposal to amend the agenda
to modify ITU Radio Regulation 2735. The conference decided that this was
not the time to debate this issue, I suspect for reasons that most other
administrations were not prepared to do so. Thus Morse code testing was
not affirmed after a debate, but was left in place because the conference
did not wish to do so. I understand that there was general agreement that
this agenda item would be welcome item for debate at the next or
subsequent WRC.

I must admit that I am by no means an expert on U.S. jurisprudence, but I
believe that the elimination of Morse code testing for operation below 30
MHz would NOT be an abrogation of the ITU Radio Regulations. In like manner
of the Japanese administration with their HF no-code amateur certificates,
the FCC, in accordance with RR 342, could exercise its rights of
derogation of the provions of the ITU radio regulations provided that
harmful interference would not be caused or experienced by stations that
continue to operate within the ITU Radio Regulations. Again, this is my
opinion and the question should be referred to someone who is competent
in U.S. legislation and international law.

73 and live better digitally

You are correct. I see no need to keep it as a requirement for a ham license. Maybe make it a requirement for advanced of extra would satisfy everyone.
Ham radio is dying. We are going to have to do something to keep people interested in this great hobby. If eliminating CW wil do it I say, so be it.
I happen to love CW. It always seems to have a magic that phone doesn't have for me. Another thing that would improve the hobby is to have more 2 meter auto patches. Most hams seem to be worried that someone might make a phone call through the autopatch! Lets all lighten up. This is a hobby. It is supposed to be fun!

"Time wasted"!? Are you kidding!?

Your phone rings....you run to your IDer...you look at the number...you
try to recall if its a ligit call...while your doing this, the machine picks
up...they may or may not leave a message...either way, they are going to call
back...you now have a tape full of messages, which takes up space, that you
have to erase!

And remember you do this every day.

Well my friend, the jokes on you...they ARE wasting your time. <BIG grin>

If one can not win a debate on the merits should they shoot the other party? (seek to remove my access). I merewly turned the tables on the one who made the threats to see if he liked it.

>If my kids were in your school district I would be concerned
>about your obsession with sex, perhaps someone is.

Obession with sex? Surely you jest?
I have been in high schools for 16 years and never once made a comment about my students in a sexual way and the only such comment I ever heard from an adult was from an adult ham that visited the school some years ago. That was his last visit.

>Perhaps with all the spamming it is time to protest to your
>system managers maybe even with some samples of what is going
>out over their connections. If every user who is sick of your
>crap did that your access would be a fleeting memory.

I did not INTEND to spam and did not know I was until I received messages from all over. In any event I have not heard a peep from my access provider.

>All of the above are simply observations; suggestions or
>perceived threats are in the mind of the beholder.

Your wording was artistic enough so that it would be hard to point to a threat.

Silent key

SILENT KEY

It is with regret we advise the passing of Kevin Law VK2XKL of Stockton Newcastle NSW.

Keven passed away last Tuesday (7th November) in the John Hunter Hospital Newcastle.

Keven is a member of the Hunter Branch Group.

from Rodney Prout VK2CN
Secretary of the Hunter Branch Radio Group Newcastle

Divisional news

Divisional news

As advised last week the Divisional Trash & Treasure will not be held at Parramatta as is usually the case. On Sunday 26th November there will be a Trash & Treasure with a Difference. It will be held at the premises of Bert Russell who died recently.

There is such a large and diversified quantity of gear ... the exact nature of which will be revealed next week ... BUT be warned ... If you are into Home Brew then the bits that you want will probably be on sale that weekend. There are bits and pieces you never thought existed. Bring a truck ... Bring a friend ... Above all bring your money ... BUT ... DON'T MISS OUT!!! Everything must be sold on the day.

As a result of this Special Sale it is proposed that this event will only include buyers & NOT sellers. The reason for this is that the sale will be conducted on premises not owned by the WIA. Further, as will be seen on the day, the space available will not allow room for anyone else.

So ... set aside Sunday 26th for the Bert Russell Trash & Treasure Sale ... Directions and further information will be available next weekend.

Federal news

Moves to expand the 80 metre DX window

The WIA will shortly make representations to the Spectrum Management Agency (SMA) for an expansion of the 80m DX window,

which is presently only 6 kHz wide, from 3794 to 38oo kHz.

This action follows a formal survey of commercial users of the spectrum between 3750 and 3899 kHz carried out on behalf of the Federal WIA by the Victorian Division. The survey results were formally presented to the WIA Federal Council at its October Extraordinary Convention, held in Melbourne over 28-29 October.

The Federal Council decided that the WIA SMA Liaison team is to make representations to the SMA seeking an expansion of the 80m DX window.

A questionnaire was sent to the 296 licensees between 3750 and 3899 kHz listed on the SMA's database as at April 1995, which was supplied to the WIA following an agreement reached at the WIA-SMA Liaison meeting held on 18 May this year.

Replies to the questionnaire were received from more than 55% of the licensees surveyed.

The survey asked them if they used their allocation, at what times of the day they used it, and if they had any objection to the Amateur Radio Service sharing the allocation.

The response from the survey was generally positive to the proposition of sharing spectrum in this region on a non-interference basis.

The 80m DX window is presently being monitored by the SMA, and the WIA urges users to take care as any inappropriate operating practices could harm the WIA case for an expansion. The SMA has already issued warning letters this year to a number of operators who apparently breached current operating rules.

WIA Family Membership

As this time of year is when the great majority of WIA Division members receive membership renewal notices, it would be timely to remind members that Family membership is now available, following a policy decision of the WIA Federal Council earlier this year.

In general, a Family Membership grade allows households having three or more amateurs in the fanily to obtain membership of their Division at a considerable discount.

There are a number of options available under which households could apply for Family Membership, but a general discount of 25% would apply. The principle behind it is that there would be a "cap" on the total amount of membership subscription from the one household, the total amount being decided by the individual Divisions.

As Divisions have differing membership subscription rates, the maximum payable will vary from Division to Division. There would

only be one copy of Amateur Radio magazine sent to each Family Membership household.

For a three-amateur household applying for Family Membership, one option is for one Full Grade membership, one X-grade membership and one Student membership. Or, it might be a combination of two G-grade (concessional) memberships and one Student, for example. Households with more than three amateurs (or, say, three amateurs and an interested SWL), only the international and national representation components of a membership subsciption may be charged ($2.90 at present) for each additional member. Check with your Division for details.

From the Federal Media Liaison Officer

Bert Russell eulogy

The following eulogy to Bert Russell was prepared by his sons.

It is read as a sign of respect for Bert ... in recognition of his donation to the Institute of his collection, and his contribution to the hobby.

Albert Cooper Russell
born Albany West Australia 22 March 1916

As a young man in Western Australia he had a good baritone voice and was often in amateur musicals, where he played parts such as the Pirate King in Gibert & Sullivan's The Pirates of Penzance and the Lord High Executioner in the Mikado.

He also rode a motorbike and competed in races on cinder and dirt tracks.

He loved and had a deep knowledge of beautifully made technical and electrical instruments (especially old ones) and he collected and restored these with a passion.

In his early and middle years he was a creative inventor of practical things, but he was often before his time.

He had an enquiring mind for all things technical, artistic and spiritual.

At times he could be cantankerous and stubborn, but only when family or frinds tried to help him to do things he didn't want to do, but there was no ill will in him ... it was just part of his independent nature.

He lived his life in the same way.

He will be sadly missed by both his family and his friends.

"You got a good run for your money Bert
and lived life to the fullest in the way you most wanted.

Bless you Bert.
May you rest in peace ..... you deserve it!"

From his sons

VK2 on WWW

VK2WI on the World Wide Web

The New South Wales Division is currently setting up its own World Wide Web page for the benefit of all those "Internet Surfers" out there. The Web page, which is currently being written and tested by Richard VK2SKY, includes details of WIA and affiliated club activities, the Internet Australian Radio Amateur's Frequently Asked Questions list, and even tells how you can win an ICOM IC-706 transceiver.

The Web page will also include a list of affiliated clubs and other radio organisations, so this is an opportunity for all clubs to get their up-to-date details onto Internet. Please submit contact details for your club and a brief description of your club's activities, such a club meeting time and local repeater information.

Please note: if you do not send your club's details, your club will NOT be listed on the Division's World Wide Web page (there is far too much inaccurate and out--of-date information on the Net as it is!)

If your club has its own Web page, please let us know that as well - we already have links to the Westlakes and Waverley club pages, as well as to over 300 other Amateur Radio Web pages in Australia and overseas.

You can submit details for inclusion in the New South Wales Division's World Wide Web page, either by the usual means to the Divisional office, or direct to Richard VK2SKY, whose Internet email address is richardm@advance.com.au

[The Division's Web pages is currently residing at a temporary site, and will be moved to its permanent home in a few weeks. If you would like to test the Web page and make suggestions, please email me at the above address.]

--Richard Murnane VK2SKY

Try ATV

Want to try a different aspect of amateur radio?

Why not enjoy Amateur Television by receiving the ATV in Sydney. There is no need to build a transmitter to be part of the ATV scene -- .one only needs a receiver.

If you live in Sydney, there is ATV on Channel 35 UHF, freely available on any modern TV set. There are two clubs using this frequency in Sydney : the Gladesville Amateur Radio Club (VK2RTV) with educational and technical transmissions on Wednesday, Friday and Sunday nights from West Lane Cove; and the Sydney ATV Group runs a Gasbag night on Mondays from Springwood on VK2RTS.

On 1250 MHz there is the Australian Amateur Television Club repeater VK2RFM at Oakdale, with a 444.25 MHz input, and enquiries can be made from their Publicity Officer Bob Barnes on (02) 587 3491 for assistance in making up a receiver for this frequency.

For the Central Coast there is is the repeater VK2RTG run by the Central Coast Amateur Radio Club on 444.25 MHz which also relays some television transmissions from Sydney.

Why not try to receive these clubs' transmissions? It's a change from the commercials and another aspect of amateur radio.

Secretary GARC

VK2 WICEN news

VK2 WICEN News

The Emergency Services Display at The Entrance is (or was) today, and thanks go to Andy VK2XRX for running it.

The closing date for the WICEN newsletter is Thursday 30th November, to John Howard VK2AMH, the State Co-ordinator and newsletter sub-editor.

And unless some more news is forthcoming, this will be the last WICEN news for the year; and no, we haven't forgotten about next year's events, such as the Red Cross Appeal, but surely there must be a few more planned events between now and next year?

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains each Monday at 8.30pm on 7175 simplex, Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, the State-wide HF net each Wednesday at 8.30pm around 3610 kHz, Central Coast each Thursday at 8.30pm on the Wyong repeater 7125, and Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Magazine Roundup

Here again is a summary of the local magazines, which in the author's opinion could be of interest to Amateurs. This week we discuss the November issues of the various magazines.

"Electronics Australia" discusses Austel regulations as applied to kit projects attaching to the telephone line; the question of whether fluorescent and halogen lamps can cause skin cancer is examined; those with a 24v vehicle can construct a 12v adapter; beginners can build a beacon that uses a xenon tube; operational amplifiers are explained with some simple circuits; those with PCs that keep locking up (and don't they all with most software?) can put a watch-dog timer to good use; a flexible power supply for a plug-pack is built; those with an historical interest can read about the invention of indirectly-heated valves; and programmers are introduced to the "PIC16C84" single-chip microprocessor.

"Silicon Chip" asks whether you have checked your house wiring; those relying upon solar power can build a simple tracker; gizmo-lovers can monitor the mixture of their fuel-injected cars; a CB transceiver is put to good use by the construction of an 80m transverter; the problem of whether RF is a health hazard, this time in the context of radio-controlled models, is discussed (given the outdoor nature of the sport, the biggest risk would appear to be sunburn); a low-cost infrared movement detector is built; a blast from the past, TRF receivers, are discussed; and a PC-controlled robot is constructed from spare parts.

"Amateur Radio" looks at negative resistance in circuits; the history of the minority amongst us from the majority of the population is investigated; the Kenwood TS440-S/AT antenna tuner is modified to work on receive; those who are always off-frequency in a net can build a netter monitor; the RD Contest results are published (at least we beat VK3!); and the new repeater regulations are examined, along with a simple timer for link receivers.

"Radio and Communications" posits whether the new sunspot cycle is underway; the "critically-coupled" antenna is critically examined; the various packet radio protocols are discussed, as are the vagaries of propagation; the question of whether huge files is appropriate on packet radio is debated; the correction to the Amateur newsgroups is still incorrect (the correct groups are "aus.radio.amateur.misc" and "aus.radio.amateur.digital" as created by Dave himself); and construction articles continue their comeback by building a booster for a 2m hand-held.

Be listening next month for another summary of the local magazines.

-- Dave VK2KFU

News briefs

NEWS BRIEFS

Airports and air traffic control problems have been in the news lately: the "Risks" forum on Internet reported two such incidents recently, one at Manchester in the UK, the other closer to home in Melbourne.

Pilots flying into Manchester airport have been warned about a 'hacker' who is sending false radio messages to aircraft in the area. They "have been ordered to double check air traffic control messages to beat bogus transmissions. Transport Secretary George Young said the hacker is thought to be using a hand-held, battery-operated transmitter on sale for #600 ($900). The hacker has given out false information to aircraft about to land at Manchester airport."

Meanwhile, Melbourne Air Traffic control received complaints from pilots coming in to land that one of their comms channels was picking up sporadic interference to the point that it was unusable.

Investigators ran around the place with trackers, but their task was hindered by the intermittent nature of the jamming. It appeared to be originating (roughly) under a flight path. An initial conclusion was that someone had a rogue transmitter and was deliberately jamming the band(s) for a short while, and then going quiet to avoid anyone pinpointing their location. A flurry of news items on various media highlighting that the prankster's deeds were a serious threat to life had no effect on the jamming.

It literally took weeks for tracker vans to finally home in on a suburban house one evening. The startled man was duly impressed with all the technical equipment parked outside his door. He claimed innocence.

The investigators did their search of the premises and eventually found the transmitter.

It was a Video Cassette Recorder (VCR).

Under certain conditions (pressing certain buttons in a particular sequence), the unit transmitted an RF signal which was sufficient to interfere with Air Traffic Comms. The house was under an approach to Melbourne Airport. The Airport authorities offered to replace the unit. They reported that the man was most co-operative and indeed, amused by the whole incident.

The authorities didn't release the VCR's brand name or model.

--Information from the Internet "Risks" forum

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(03 November - 09 November)

ISSUED 10 November

SUMMARY
Date 03 04 05 06 07 08 09
10cm 73 73 75 75 74 76 77
A 5 10 16 20 9 6 (4 estimated)
T -2 1 -7 18 22 14 -1

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET ON 3RD AND 9TH NOVEMBER, MAINLY QUIET WITH ACTIVE AND MINOR STORM LEVELS 12-18 UT ON 4TH, QUIET TO UNSETTLED WITH A BRIEF ACTIVE PERIOD ON 5TH, AND QUIET TO UNSETTLED 6TH TO 8TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES ON 4TH, 6TH TO 9TH WITH A SHORT DEPRESSED PERIOD OF 20 TO 30 PER CENT ON 8TH. FREQUENCIES WERE DEPRESSED BY 15 TO 20 PER CENT ON 3RD AND 5TH NOVEMBER. SPORADIC E BLANKETING WAS REPORTED ON 5TH, 6TH AND 8TH WITH SPREAD F OBSERVED ON 8TH AND 9TH.

FORECAST (10 NOVEMBER - 16 NOVEMBER)

SOLAR: VERY LOW.

GEOMAGNETIC: MOSTLY QUIET UNTIL THE 14TH; THEREAFTER UNSETTLED WITH ACTIVE TO MINOR STORM PERIODS.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES UNTIL THE 14TH; THEREAFTER 10 TO 20 PER CENT DEPRESSED PARTICULARLY ON HIGHER LATITUDE CIRCUITS. SPREAD F MAY DEGRADE NIGHT COMMUNICATIONS AFTER THE 14TH.

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Parkes

The Parkes and District Amateur Radio club invites all Hams in the central West and beyond to its Western Area Meeting, or WAM "95. This is to be held at the Forbes RSL on SATURDAY THE SECOND OF DECEMBER.

It will be one of those rare chances for all Hams in the west to get together for a day of very interesting tlks and lectures and to catch up with friends.

Topics will include, Amateur Radio Astronomy, Ian O'Toole from the Castle Hill Military Museum, Aircraft Enhancement, a rare photo-graphic display and even a talk from the WIA.

Morning tea starts around 10am with talks underway at 10.30 am SHARP!

Proceedings will finish at 3pm and then the Christmas Party of all Christmas parties will be held at John Meagher, VK2AMV's place.

This will be a bring your own everything affair with tables set up for you to sell all that junk cluttering your shack. So bring it all along.

There will also be a scenic bus tour for those not wishing to attend the conference during the day.

So be at the Forbes RSL for WAM '95, and a giant Christmas party afterwards on SATURDAY, DECEMBER THE SECOND from 10am.

Club news: Liverpool

The next Liverpool Club AUCTION will be held on Saturday the 18th of November commencing at 11:30am.

Doors will open to Sellers for equipment registration at 9:30am and to buyers and browsers at 11:00am. A sausage sizzle will be held for breakfast and lunch.

The venue as usual will be the hall at the Glenfield Scout Camp in Cambridge Avenue at Glenfield, just off Moorebank Rd.

See you on Saturday the 18th for the Auction and next Wednesday night for the meeting.

--Brad. VK2QQ Publicity Officer.

Club news: VHF-UHF DX Group

The last meeting of the VHF-DX Group for the year will be held on Tuesday 21 November at Amateur Radio House, 109 Wigram Street, Parramatta at 7.30 pm.

The meeting will be to determine the level of interest in putting together a bulk order for the "No Tune" 1296 MHz transverter kit sold by the VK5 equipment store.

The basic kit is on a single pc board and transverts from 144 MHz to 1296 MHz, producing about 100 milliwatts of output on 23cm. The receive side has a noise figure of under 2 dB. An amplifier kit is also available to take the power up to 10 watts.

Further details of the transverter kit will be available at the meeting. If you are interested and would like to be part of the bulk order, please feel free to come along.

The approximate cost of the basic transverter kit is $150 and the ten watt amplifier about $100.

Once again the date is Tuesday 21 November.

Don't forget the Tuesday Activity Nights on 144 MHz and the Group's Sunday morning net on 146.5 MHz FM starting at 11.00 am.

submitted on behalf of Richard Soulie, VK2ARS

Club news: Waverley

A reminder that the next meeting of the WAVERLEY AMATEUR RADIO SOCIETY will be held on Wednesday, 15th November. A topic for the evening has yet to be announced, but come along anyway for a ragchew. The venue is the society's premises in Vickery Avenue, Rose Bay (off New South Head Road), next door to the Rose Bay R.S.L. club where a number of members gather for pre-meeting refreshments. Starting time is 7:30 pm, with doors opening at 7 pm. Members and anyone interested in amateur radio are invited to come along.

Don't forget that the society holds it's weekly net at 7:30 pm every Tuesday using the Paddington 2 metre repeater on 147.025 MHz.

All are welcome to join in.

--Simon Buxton - VK2EII - Publicity Officer

Club news: Summerland

Summerland Computer Expo

Lismore City Hall on Saturday 25th, November, from 9.30am. The 4th Grand Summerland Computer Expo, organised by the Summerland Amateur Radio Club.

Many commercial displays of the latest in computers, software and electronics.

Demonstrations of Internet and Amateur radio activities.

Bing and buy tables for pre-loved gear.

Lucky Door prizes. refreshments available.

Admission $2, or $4 per family.

For more information contact Rick (VK2EJV) on 066-895137, Graeme (VK2GJ) 066-851336 or try our PMS, VK2SRC-2, or BBS VK2YDN-1, both via VK2RPL-2 668900.

VK2GJ - Graeme - Publicity Officer

Club news: Chifley

The Chifley Amateur Radio Club is looking for a teacher or teachers for our classes in 1996. If you are interested please contact the club secretary at Post Office Box 280 Mount Druitt 2770 or a packet message to the Secretary c/- VK2CRZ@VK2CZR.nsw.aus.oc.

The next classes for the amateur radio licence to start at the Chifley Amateur Radio Club will be in February 1996. For more information about these classes contact the club secratery.

The Chifley Amateur Radio Club Christmas picnic for members is on the 19th of November. Any members that will be going that have not notified the club then please do so as soon as possible, so catering can be arranged.

The AGM for the Chifley Amateur Radio Club will be held on the 2nd of December at 1-30pm in the club rooms. Members should now have their letter regarding the AGM by now.

The location of the Chifley Amateur Radio club rooms are at the Good Shepherd Church hall, Hyatts Road, Plumpton, 150 metres south of Jersey Road, opposite the shops at Plumpton Markets.
Our mailing address is Chifley Amateur Radio Club, Post Office Box 280, Mount Druitt 2770.
The packet address is VK2CRZ@VK2CZR.nsw.aus/oc.
The club BBS is VK2CZR on VHF 144.700 144.825 UHF 439.075

Ray VK2FKO
Publicity Officer

Club news: Illawarra

The Illawarra Amateur Radio Society will be holding its Monthly Meeting this coming Tuesday (14th November) commencing 7.30pm at the SES Building Montague St. North Wollongong.

Rob McNight, VK2MT, our Repeater Officer, will be giving a practical deemonstration on setting up an 828 for 2 metre operation.

The meeting will finish with the normal ragchew and cuppa.
Visitors are always welcome.

ANARTS News Bulletin 884 12th November 1995

SB SPCL ARL ARLX067
ARLX067 SOUND ON TAPR HOME PAGE

TUCSON AMATEUR PACKET RADIO INC (TAPR) HAS ADDED AN AUDIO
''VIRTUAL MEETING, WORKSHOP, AND SEMINAR PAGE'' TO ITS HOME PAGE
ON THE INTERNET, ACCORDING TO TAPR PRESIDENT GREG JONES, WD5IVD.
THE ADDRESS IS HTTP://WWW.TAPR.ORG/

TAPR IS EVALUATING A ''REALAUDIO'' SYSTEM TO PRESENT PACKET RADIO
MEETINGS AND PRESENTATIONS. THE SYSTEM ONLY ALLOWS SIX CONCURRENT
CONNECTIONS, SO IF YOU FIND THAT AN AUDIO CHANNEL IS BUSY, TRY
LATER, JONES SAID.

THE NEW AUDIO SELECTIONS INCLUDE:

THE MARCH 1995 TAPR ANNUAL MEETING IN ST LOUIS, WITH A TAPR/AMSAT
WORKSHOP AND A SEMINAR ON ERROR CONTROL CODING BY PHIL KARN, KA9Q

A NATIONAL MEETING OF REPEATER FREQUENCY COORDINATORS ON OCTOBER
7, 1995, NEAR ST. LOUIS, INCLUDING TALKS BY RALPH HALLER, DEPUTY
CHIEF OF THE FCC WIRELESS TELECOMMUNICATIONS BUREAU, AND ARRL
PRESIDENT ROD STAFFORD, KB6ZV AND

AN INTERVIEW WITH TAPR PRESIDENT JONES ON THE SYNDICATED RADIO
PROGRAM ''HAM RADIO AND MORE,'' AUGUST 13TH, 1995.

THE TAPR HOME PAGE ALSO CONTAINS A PRIMER ON AMATEUR PACKET RADIO
AND OTHER PACKET-RELATED MATERIAL.

: Gerry K8EF

I don't know if it is reasonably accessable - perhaps you might be able to find this on the ITU Home Page on the World Wide Web (but I doubt it), but the Q signals are found in Appendices 13 and 14 in volume 2 of the ITU Radio Regulations entitled "Appendices to the Radio Regulations", published in Geneva 1990.

Somehow I get the feeling that it is probably not worth buying the manuals (a price that is in excess of $Cdn100. Better off just to depend on extracts as published by other sources.

Technically speaking, you probably were breaking the law by refusing
the sale.

There are a number of reasons an unlicensed person might
purchase amateur equipment, such as a person preparing for the
test, buying a gift for a ham, etc....

By the way, why all the heat on RS?..... I can call any number of
1-800 numbers in the back of QST and order equipment with no
license/call shown or asked for.

Source record: 235242

Help needed. I have a MRC-765 model aircraft radio that I would like to use. It is circa 1976 and opperates on 72.160mhz. I understand that in the early 1990's the FCC changed the specs for model radios. Can anyone tell me what this change means to my radio? I have a schmatic for both the Tx & Rx. I would like to know if I can simply change crystals to a current channel or should I try to move the frequency into the 6-meter ham band since I am a lisenced amateur radio opperator. Thanks for any and all help.

Hank kb2rkx@westnet.com

Actually, WRC-95 *didn't* debate the issue. Instead they handed it off to a committee to put it on the agenda for a future WARC. You're right though that the FCC won't act until the treaty language is modified. That could happen as early as 1997, but is more likely to be delayed until 1999. The value of petitions now is to remove the illusion that the amateur community doesn't desire changes. The FCC has publicly stated that the only reason they've continued to support a Morse test is because the amateur community demands it. What they really mean by that is that the ARRL demands it, since that's the 800 pound gorilla they listen to when they want the sense of the amateur community. Short of getting the ARRL to reverse field and demand elimination of the Morse test, amateurs who want to see this change must be vocal directly to the FCC to disabuse them of the notion that the ARRL speaks for all of us on this issue. That will then allow the FCC to look favorably on modification of Article 32 at a future WARC.

(A cc to the ARRL is warranted too. Miracles do happen, and the ARRL might change its position if it gets enough pressure from the membership.)

>Right now, I doubt the FCC is answering its phones anyway. I suspect that
>they're not on the list of "essential services" under the current gov.
>shutdown.

Too true, but the sacks of mail will be waiting for them when they come back. This has to be a long term effort. Change isn't going to come overnight, and those wanting HF *now* had better disengage their brains and become modems to pass the Morse test. This effort has to be aimed at making things better for those who follow in the years ahead. It is unlikely to make a difference to those desiring HF access now.

The US can do this, and has on rare occasions in the past. But it is
unlikely to do so in this case. In general, the US has tried to avoid
using footnoted exceptions to ITU regulations, doing so only when a
vital national interest was at stake. This policy is founded on the
notion of leading by example. The fear at Foggy Bottom is that if we
start taking exceptions to treaty language, other nations will do so
also and the value of the treaty process will be decreased.

I've assumed it to mean the Quality of reception is a 5, on a scale
of 0 to 5. Often used in QSO, "you're Q5" meaning perfect copy.
I think it is total seperate from the three letter Q codes.

> BV/N0IAT in Taipei, TAIWAN R.O.C.

Well, that estimate unfortunately goes for just a few people. I've read messages about how fast somebody learned the code. Good for them! I've been at it for 2 years now, I think, and I've progressed, but I don't think I'm there yet. I find it hard to concentrate long enough. In a QSO there are repeats, redundancy and a standard way to conduct a minimal QSO which helps to stay on track, but random text at a test is a different matter.

In many countries the requirements seem to be higher than in the USA. E.g. in Finland and in Holland one needs to be able to send at 12 wpm with no uncorrected mistakes and only a limited number of corrected mistakes allowed. Copying requirements are also strict, only 5 to 8 mistakes(=letters) maximum. One word of 5 letters missed is 5 mistakes.

In Finland there is also an extra requirement for a full license in that one has to have 300 CW contacts before taking the 12 wpm test. I tried CW on 2 meters when I was in Holland. The two QSO's I made took almost half an hour a piece and I didn't copy much of the other stations exchange. I can send much faster than I can copy with my keyer, even though I haven't done much sending practice. PSE QRS didn't have any effect. So 300 QSO's might take a total of perhaps 200 hours quite apart from the fact that it is very very quiet on the 2 m CW band.

I understand that the current requirements are probably not like the requirements that were once set for professional morse operators, but this is just a hobby and as the morse requirement has nothing to do with safety or radio technique, it should be sufficient that a person complies with the ITU regulations about CW for HF licensees in a minimal way.

The morse requirements look probably moderate in the eyes of the administrators and hams setting them, because these officials are commonly either former professional 'sparks' or old timers.

A novice license is available, but 80, 40, 15 and 10 m aren't so great for everybody. 80 and 40 require too much antenna space and the rest is mostly dead now. How make 300 CW QSO's on dead bands? I have no appetite for contests.

Understand me well, I haven't even looked in the direction of phone transceivers for HF and have a Sierra CW QRP set on order that I'm very much looking forward to build. I want to do CW on HF, because the rigs are relatively simple to make and experiment with and not too expensive. Simplicity was once the reason why I designed and built home brew FM and not SSB rigs for VHF. And the reason to build a rig at all? Not just to make QSO's. No rather more for experimenting, exploring radio and electronics, learning more at one's own pace. I thought that the radio amateur service was about that.

The CW requirements look very much like an effective obstacle intended to keep (technically competent) people away from HF. It's hard enough for a city dweller to get a signal out (and in). How to fit an antenna on a small balcony so that it isn't noticed, how to avoid RFI and still get out on some band?

Radio amateur organisations should work towards easying CW requirements and allow all HF licensees free choice of bands. And no minimum number of CW QSO's for a full license, please.

THIS IS A HOBBY. IT SHOULD BE FUN.

AND NOT REQUIRE MORE TIME TO PURSUE THAN IS AVAILABLE FOR A HOBBY.

2285. Attitudes

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-17 00:00:00 UTC
From: Steve Bramham <steve.bramham@turner.com>
Message-ID: <48ipcc$2p6@tbsnames.turner.com>
Source record: 235250

I was first licensed as a Novice WN4MPD back in the early 1960's. I upgraded to General Class WA4MPD during the late 1960's. While stationed in Hawaii with the US Air Force I upgrade to Advanced Class and received the new call KH6HCR. I have operated in Vietnam as 3W8MPD to provide phone patch traffic for then Ambassador Ellsworth Bunker to his wife who was the Ambassador to Nepal. I have worked as KX6SB in Majuro in the Marshall Islands. I am currently licensed as KD4RG but still ONLY an Advanced Class licensee.

When I first got into Ham Radio, it was fun, made lots of contacts, met lots of interesting people, and did all the usual ham stuff, ie. field day, VHF/UHF QSO parties, camping trips mainly for hamming.

I have operated all bands up to 1296 MHz and all modes with power levels as low as .10 (yes 1/10th) watt to the full legal limit. The most fun was working RTTY with a ham in Italy for over an hour and a half. We actually "talked" about family, work, our respective countries, and very little about actual hamming.

I listen to the hams on the air now both on HF and especially on 2-meters and it sound like the old days of CB Radio. Everybody is an expert on every aspect of ham radio and will tell you so at the drop of a hat.

Who cares if you call CQ on a repeater? I have. Who cares if you QSY? I use that as well. Who cares that YOUR favorite mode is different from MY favorite mode? NO ONE ! ! !

There is room in ham radio for all. If you want to experiment, do so. If you want to talk for hours on end about nothing in particular, do so. If you want to try different antennas, do so.

I have heard some extrememly rude people on the ham bands, but I have also heard some very articulate and interesting folks as well.

Christmas is jsut around the corner. What would you do if you heard someone calling on HF or the local repeater, "CQ Santa Claus"? What, you've never heard this before. Every year I like to introduce some "small" friends to the adventure of ham radio. "Let's see if we can find Santa Claus so you can tell him what you want for Christmas". Usually there is a willing

ham that knows what going on and will "play Santa". Would you play Santa or would you complain that it is against some rule to call CQ Santa Claus?

It's a hobby folks. Nothing more. Relax and enjoy it. Give more to the hobby than you receive and this "problem" hopefully will disappear.

Just my 2 cents worth, no flames please. I know you can't please all the people all the time, but at least let the other people do their thing too.

Happy Holidays to All
And to All a Goodnight

2286. Software announcement, v1.1 of AZPROJ mapping proj available

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-17 00:00:00 UTC
From: mack@ncifcrf.gov
Message-ID: <DI7Cqp.2J4@ncifcrf.gov>
Source record: 235251

Announcement: AZPROJ11.zip (approx 950kb) and AZP10-11.zip (60kb)
are available on

nic.funet.fi/pub/ham/antennas
and
oak.oakland.edu/pub/hamradio/pc/ham-utils

Michael NV3Z's home page
http://access5.digex.net:80/~michaelk/

contains a demo map, links to e-mail and ftp sites. Michael is
bicycling across the USA (finishing late Nov). 'Til he gets
back and updates the page, the ftp links will be to old (or
maybe non-existant files).

(V1.1 is a bug fix for v1.0. V1.0 did not run on Postscript
printers, if a grid.dat file was sent before the .wdb files. v1.0
ran fine under Ghostscript. Unless you have a real Postscript
printer and want to plot worked grids, you do not need this fix.
The whole suite of files is available as azproj11.zip. The fix
only is in azp10-11.zip.)

Azproj v1.1 is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

Azproj can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running azproj, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The azproj files are GNU copylefted.

At one time, in the 1930 and before era, the QSA report was widely used.
Often the SA was left out. A common expression was "you are very QSA".
Also QSA 1 to 5 was used. This was before the RST system was adopted.
The RST system was suggested by Braden in QST for October 1934.

Thank you for forwarding and posting this defamatory message. I was unaware I was being libeled by anyone in MEOL. MEOL has no use for me whatever for entirely different reasons than users here would think. Through my activity in exposing their wasteful government spending I may have caused them to lose many positions and money. Even when I did post from MEOL they were ineffective in removing me. Methinks they need another look at what remains of their boondoggle.

A copy of this response will be sent to Yanowitz and I expect him to apologize to me, esspecially since his message was posted for thousands to see. If he does not I think I will be calling my state re AGAIN about what is going on at MEOL. He had no right to say a word more other than there was nothing he could do because I do not post from MEOL.

>

I guess you don't have to read any posts that either offend
or bore you. If you use a system that digests everything into
one big post, perhaps you ought to change systems. In any
event, you world is not going to change just to make you happy.

Todd Carney

What Todd and several other participants don't seem to understand is
that this group: rec.radio.amateur.misc, is compiled and sent out as an
E-mail digest by an automated system at UCSD. The digest system makes it
available to many participants who do not have direct usenet access. I
don't think anyone is asking the world to change per se, the poster was
asking that the rules of netiquette be followed. This is not a binary
newsgroup, the posts were inappropriate for posting here.

The images were interesting, and at least had a positive intent and are
radio related. This group does seem to charge into off topic subjects
frequently, sometimes inadvertently, sometimes through intentional
flamebate. Charles seemed to be acting in good faith, and perhaps
someone can recommend an appropriate forum for his images.

One final note: Brian works hard to keep the digest system up and
running, and promotes open discussion by refusing to censor, despite
some pressure over the years. Thanks Brian!

http://www.xmission.com/~inetmkt/virtualradio

Announcing Virtual Radio, a cool ham radio website
featuring links to all the hot ham sites on the
WWW. Using the advanced frame feature of Netscape
version 2.0 or compatible browsers, the Virtual Radio page
allows you to cruise your favorite ham websites without
leaving the index! Lookup callsigns at QRZ or check the
OH2BUA's webcluster for the latest DX info -- it's all there
at Virtual Radio.

There are ten categories of sites:

Callsign/QSL info
Realtime DX Info
HF DX/Contest Info
V/UHF DX/Contest Info
Products/Services
Amateur Radio Clubs
Antennas/Propagation
Other Modes/Info/Pointers
Publications/Webzines
Official Bodies

If you don't find your favorite site in the index,
send the URL to inetmkt@xmission.com.

You'll need a web browser supporting forms: Netscape
Navigator v2 is available from:

http://www.netscape.com/comprod/mirror/index.html

or the Ncompass browser is available from:

http://www.excite.sfu.ca/NCompass/

73 & cu in the contests

Burt,

This has never been about debate you insult anyone and every one
particularly if they are an amateur radio operator. I take offense
because I am in the above group. Threats are the currency of
frustration and I assume lots of folks are frustrated with
your posts. Actually I failed to see a threat in the original
post but my perspective may differ from yours. If you were
standing on my front lawn yelling the crap you post I would have
the cops haul you off maybe some folks see your sysop as a cop.

>
>
> >If my kids were in your school district I would be concerned

> Obsession with sex? Surely you jest?

No actually I don't this is deadly serious. The on going sig
about the wife in a teddy blah blah. The continuous referrals
to sexual inadequacy among hams. Psychology is not my discipline
but from my layman's point of view Freud would have a ball with
your posts and answers to most criticism.

> I have been in high schools for 16 years and never once made a comment

Not yet anyway gs

Even if you did not address all those groups the general tone
of your posts give them a strong sparoma. I think spam is more
than hitting a lot of groups it can be construed as making a
large number of worthless posts. In this regard your contribution
can be considered spam.
>

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 17/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 17 NOVEMBER AND FORECAST FOR 18 NOVEMBER - 20 NOVEMBER

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 16 Nov
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 4.3E+06 (normal)
X-ray background: A1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
18 Nov 19 Nov 20 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 18 Nov: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to quiet

Estimated Indices : A K Observed A Index 16 Nov
Learmonth 9 3233 2112
Fredericksburg 6 5
Planetary 5 4

Observed Kp for 16 Nov: 0001 1113
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
18 Nov 8 quiet to unsettled
19 Nov 8 quiet to unsettled
20 Nov 6 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

17 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
18 Nov Normal Normal Normal-fair
19 Nov Normal Normal Normal-fair
20 Nov Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
17 Nov 27

Observed Australian Regional MUFs:
Darwin: Not available. Townsvile: Near to 10% enhanced. Sydney:
About 15% enhanced. Hobart: Near predicted with spread F 14-18UT.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
18 Nov 20 Near predicted monthly values to 10 % enhanced.
19 Nov 20 about 10% above predicted monthly values
20 Nov 15 about 10% above predicted monthly values
COMMENT: IPS HF Communications Warning 28 was issued on 12
November and is current for interval 15-18 November.

2299. Fusing Power Leads

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-17 00:00:00 UTC
From: norman@saba.kuentos.guam.net
Message-ID: <48j3d0$646@lehi.kuentos.guam.net>
Source record: 235264

I have noticed that almost all installations of mobile radio gear tell you to fuse both the Pos and the Neg lead going to the battery. Two questions:

1. Why both leads? Most (if not all) cars are neg ground anyway. What protection does this offer when the pos is fused?

2. If the equipment draws 18A max, what fuse should I choose? I assume that I would choose a slow-blow type and I'm guessing about a 10-12 A fuse in each lead?

Thank for your advice. Please forgive me if this is a silly question and I appreciate your patience.

Regards

Norm

>you could email to me? Thanks & 73.

I would also like to know what the meaning of "Q5" is. The Downey
(California) ARC used to have a newsletter called "Q5". I never got
around to asking what the significance of the name was before I left town.
It's not listed inside the back cover of my ARRL log book (as are the
3-letter Q signals).

> Europe because of the FM tuner? any comments?

In the UK, broadcasts can be on virtually any frequency ending at either a 100kHz or 50 kHz boundary. ISTR that most US spec tuners move in 200kHz steps on the odd 100 kHz boundary, so your dealer is giving you very good guidance. The stereo sub-carrier is the same. Also there are a number of non-essential advanced digital features available with most European f.m. radio broadcasts related to following networks and also finding taffic news reports, and these require European spec models to enjoy.

Maybe a small portable receiver like a Sony ICF-7600G or ICF-SW55 would be better to use both on a European car journey and also still be useful at home.

Hi Gary!
I was trying to enhance the audio responce of the mic. I work ground wave alot in Detroit and people always were able to guess which type of radio that I was using based on the way it sounded. I got the mod off of an article by KF2AT & KB2JPD

Hank-KB2RKX (kb2rkx@westnet.com)

2304. My wife even thinks hams are....

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-17 00:00:00 UTC
From: k1oik@ccsnet.com
Message-ID: <8049-311824401@ccsnet.com>
Source record: 235269

I received a call today from a ham who would not identify himself. I repeatedly asked him who he was, even saying to him that if he had an opinion worth anything it is reasonable to expect he state who he was. Still he he refused. I then commented that he was "so typical ham, no guts."
My wife then told me to get off the phone and stop wasting time with gutless hams who hide behind their mikes. As I made one more effort to identify the caller, he hung up. He also made a veiled threat that bad things would happen to me, I retorted I might take it more seriously if he
were not a gutless ham.

This call is just so typical of hams, brave at a distance.

SB QST ARL ARLB103
ARLB103 Election results

The ARRL Committee of Tellers for the election of directors and vice directors for the 1996 through 1997 term met at ARRL Headquarters November 17 to count ballots. Here are the results.

Delta division for director:
Joel Harrison, WB5IGF, 1224.
Mal Keown, W5XX, 930.
Lynn Lamb, W4NL, 710.

Great Lakes division for director:
George Race, WB8BGY, 3197.
Wayne Wiltse, K8BTH, 1884.

Midwest division for director:
Lew Gordon, K4VX, 1595.
Roger Volk, K0GOB, 1544.

Great Lakes division for vice director:
John Thernes, WM4T, 2992.
William Coale, KB8MBJ, 2055.

In each case the candidate receiving the greatest number of votes was declared elected.

The following incumbents were unopposed and declared elected without balloting: Atlantic division director Hugh Turnbull, W3ABC; Dakota division director Tod Olson, K0TO; Pacific division director Brad Wyatt, K6WR; Southeastern division director Frank Butler, W4RH; Atlantic division vice director Kay Craigie, WT3P; Dakota division vice director Hans Brakob, K0HB; Delta division vice director Rick Roderick, K5UR; Midwest division vice director Bruce Frahm, K0BJ; Pacific division vice director Jim Maxwell, W6CF; and Southeastern division vice director Evelyn Gauzens, W4WYR.

The terms of office are for two years, beginning at noon January 1,
1996.

From Tad Cook, KT7H
Seattle, WA November 17, 1995
To all radio amateurs

SB PROP ARL ARLP048
ARLP048 Propagation de KT7H

Solar flux still meanders listlessly in the seventies. At least over the past week geomagnetic disturbances were down, with K indices as low as zero and one over many periods. Look for fair conditions over this context weekend, with no big surprises in store. We could see some disturbed conditions around the end of the month, and again after December 11.

Sunspot Numbers for November 9 through 15 were 13, 19, 14, 11, 12, 13 and 28, with a mean of 15.7. 10.7 cm flux was 77.2, 78.1, 77.4, 76, 73, 75 and 76.6, with a mean of 76.2.

The path projection is for this Sweepstakes contest weekend, and goes from Seattle to Oklahoma, Chicago and Miami and from Atlanta to Dallas, San Francisco and Kansas.

From Seattle to Oklahoma, 80 meters should be good from 2300 to 1500z, and 40 meters nearly around the clock, with poor periods from 0330 to 0500 and around 1400 to 1500. Check 20 meters from 1600 to 2300. 15 meters may be open from 1800.

From Seattle to Chicago, 80 meters should be open from 2230 to 1500z, 40 meters from 1500 to 2300 and again from 0030 to 0200. 20 meters looks good from 1530 to 2230.

From Seattle to Miami, check 80 meters from 2330 to 1230z, and 40 meters from 2130 to 0200. 20 meters looks good from 1600 to 2100.

From Atlanta to Dallas, 80 meters looks good from 2300 to 1430z. 40 looks good around the clock, with some bad periods around 1400. Check 20 meters from 1530 to 1730 and again around 2000 to 2300.

From Atlanta to San Francisco 80 meters should be always open, with 40 meters closed from 0130 to 1600z. Atlanta to Kansas looks good

for 80 meters around the clock, with the exception of 1600 to 2200.
Check 40 meters from 0000 to 0200 and 0800 to 1100 and 1530 to 2230.
20 meters should be open from 1630 to 2130.

Try the University of Arkansas Little Rock's Amateur Radio Club call
sign data base. This is a feed from the FCC data base. URL:
http://www.ualr.edu/doc/hamualr/callsign.html

They have a very nice search engine which is able to search for name,
city, zip code, and even call sign!

Thanks Hank
I forgot about that little anomoly.
I acquired an old precompressor unit from a hamfest several years ago.
It was designed probably for Chicken Band operators but I started
using it on the HTX100 so long ago I almost forgot about it.

Now that you have jogged my memory, audio was the pits!

Astatic makes a great mike also that has enough room to include the
scan buttons if you use them, the performs great on the HTX100.
I hope someone can help you with your reset problem.

Hi Greg. I was down there and just got back. Was way too busy to even think about ham radio for the most part (except see my web page for the live reports I filed on Comdex). I had to carry 500 floppy disks for distribution (all of us filled our bags with disks for handing out...) so decided not to even carry my HT. First time I have not carried an HT on a business trip - but I was so overloaded this time, I had to leave stuff behind. Anyway, it sure was exciting!

You can read more about it, via my daily show updates, at http://www.accessone.com/~vbook/hronline.htm

That's my free Ham Radio Online magazine (with actual content, not just pointers to cyberspace).

i've seen just "RKO" and "RKO Pictures"...might depend on when the film was made.

RKO was a project by RCA when they acquired the Keith Orpheum (i think i got that spelled right) vaudeville/movie house chain, as a place for them to show off/create a use for the Photophone system of sound recording (as opposed to Vitaphone or Western Electric and so on..)

RKO produced a number of noteable pictures before falling into decline during the hughes years. I guess it's still around in some form (remember seeing it being part of General Tire at one time...with a network of radio stations..)

Usually at some point during the year, American Movie Classics will have a series of films that were all from RKO and in that they'll do a segment on the history of the company.

Really? Most? Daily? The number of amateurs who are MARS, NTS, or ARES daily participants is a small fraction of one percent.

>>Our volunteer network uses the internet as our main
>>intra-communications platform.
>
>Not a very reliable source of communications! In the event of a real
>Emergency or Disaster, I doubt if the internet will be up and running.

Consider that the internet remained up during the California earthquakes, riots, and fires while ordinary phone service was disrupted. That won't be the case in every disaster, of course, but it has been true frequently enough to consider the internet an important disaster communications asset. This is especially true for out of area communications relay.

>>So if you have internet and would like to help within
>>your community by acting as a traffic point for your
>>community, I can use your help.
>
>If the internet is up, so is the telephone service, tell them to use
>their own 2-bits and dial the number themselves.

See above. The leased lines of the internet often are available when the dial up network is overloaded due to a disaster, and the internet uses routing protocols that can dynamically work around downed links. Not to mention that the internet will be functioning normally outside the immediate disaster area. It's not the total communications solution, but it can unload a large fraction of long distance traffic loads from HF amateur or other volunteer communications links.

Disaster communications volunteers shouldn't overlook the internet as a resource. And those supporting military families or moving traffic out of area may also find the internet a very useful tool. It's a mistake to think amateur over the air communications can carry the entire load. The over the air NTS, MARS, and ARES links are routinely overwhelmed

during a communications emergency. During the California quakes, only a few thousand messages were sufficient to back up the amateur systems for days. Don't spurn another tool in our communications toolbox.

Gary

Christopher K Greenhalgh (cgreenha@magnus.acs.ohio-state.edu) wrote:

[DISCUSSION OF CALLER ID DELETED]

: "Time wasted"!? Are you kidding!?
:
: Your phone rings....you run to your IDer...you look at the number...you
: try to recall if its a ligit call...while your doing this, the machine picks
: up...they may or may not leave a message...either way, they are going to call
: back...you now have a tape full of messages, which takes up space, that you
: have to erase!

My caller ID phone rings with a different tone for friends, so that I
don't have to get to the phone to tell if I want to answer it. The newer
answering machines will give different messages depending on who calls.
That means that if I have a message for you, such as, "I'm not home, but you
can call me on '94," you can get that. For my brother who isn't a ham, the
message would be different. For the junk caller who has made 10 of the last
24 calls, the message would again be different. (BTW, I knew they were pests,
but I didn't realize it was that bad until I looked just now.)

: And remember you do this every day.

Not really. In the last 28 days there were only 24 calls, 17 were junk,
(10 from one source) and the other 7 were legitimate.

: Well my friend, the jokes on you...they ARE wasting your time. <BIG grin>

It wasn't that long ago that hams played with new technology. Why? Just
because it was there.

There is a use for this new-fangled toy. Let's not be afraid of what we
don't understand; lets get back to the spirit of the amateur pioneers and
just play with this stuff. How could we use it? Keeping away the junk
calls (70% in my case), personalized message boxes and I'm sure there are
other uses.

In the good old days, folks said that radio was a waste of time also.
I'll admit it, the jokes on me... I AM wasting my time, but what fun I'm
having in the process.

>Speaking of HAM radios, could this group help me out? Every time I go and
>dive with my radio set, the fuse blows. What's the trick here?
>

Ah, yes...
There was a time when having a HAM ticket *meant* something...
When a fuse blows consistantly, it's because there's more current going thru the fuse than the fuse is rated to carry. The fuse, being a safety device, blows to prevent this excess current from flowing, possibly damaging something.
Check to make sure the fuse is the proper rating for the gear. Do *not* replace it with a higher-rated fuse! If it is the correct fuse, then the gear is drawing too much current. This needs to be corrected. Maybe it's a short in the power line, maybe the gear is not a boat anchor. Either extreme, and all points in between should be checked, and corrected.
Good luck.
Bill

Does anyone know if there are any scanner in the US market with 800mhz
band easy to mod ?
In my country they are no restriccions to receive cellular band.
I have a Kenwood TM 732 , but the step on 800 mhz dont match the standard in
CX. (30 khz).
Thanks 73 from

Is this is a ham-radio project or a commercial project?
In either case, you should get copies of the last 5 years
of the Proceedings of the IEEE Frequency Control Symposium
(FCS) and the Proceeding of the Precise Time and Time
Interval Application and Planning Meeting (PTTI). PTTI
is run out of the US Naval Research Laboratory. Numerous
papers have been presented by JPL about their systems of
distribution of 100 MHz. I think that would give you a
good start. Also, if you want to send me email with more
details (like actual specs) of what you're doing, we may

be able to help you here at Hewlett-Packard. You might also want to talk to our Optical Communications Division in San Jose about fiber optics. If we can't help you ourselves, we can probably refer you to the right person.

An alternative to what you are doing would be to generate the reference separately at each site using our 5071A cesium clocks. The cesium clocks can then be synchronized to within a few nanoseconds using our proprietary GPS common view technique. One reason JPL doesn't do this is that their reference is a hydrogen maser locked to a cesium clock, and hence they would have to have an H-maser and cesium at each site. H-masers are much bigger and more expensive than cesium clocks.

2344. Proto-newbie in Denver seeks advice

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-18 00:00:00 UTC
From: rcw@csn.net
Message-ID: <48mg0f$l37@teal.csn.net>
Source record: 235295

Greetings out there!

I recently purchased the ARRL guide, _Now You're Talking_ from my local Radio Shack. I've completed about 1/3 of the lessons and have found it to be very informative and well written. It seems that a lot of my interest and experience in electronics will serve me well whilst studying for the novice license.

This book covers both the Technician and Novice licenses. My immediate reaction is to try and learn the material for both licenses. What do you think of this (and their) approach?

I personally am
interested in "talking on the radio" to serve a specific purpose such as weather spotting, emergency services, or information exchange about the hobby. I saw a show about remote Indian villages visited by Bush pilots on occasion in the Canadian Arctic last night -- it would be a thrill for me to QSO some of the town operators, or as a Native American myself, communicate with them about conditions in the far north. I know that alcohol's availability is a big concern. Anyway...

CW interests me quite a bit, so
I think it makes sense to go after the Novice license with the 5 wpm test. At 5 wpm, My mind stands a good chance of staying ahead of my hand ;-)
(Is there any relationship between one's ability to type versus one's ability to transmit CW? I type about 120 wpm. I just ordered a key and a CPO from Universal Radio, so I do not know what my abilities are as of yet.)

One reason CW appeals to me is because it is the only mode permitted on 80 and 40 meters which I perceive to be DX bands (from my SWL experience).

I have a few questions which perhaps one of you can answer:

1) What would be a good "starter rig" for CW? I'm fairly confused by all the options out there. While not made of money, I can save up for and purchase a receiver costing > $1,000 if necessary. I expect to stay in this hobby for a long time.

2) The ARRL publication strongly suggests finding other hams in your area to benefit from the collective wisdom. Does anyone know how to contact hams in Denver? If not, I will write to ARRL.

3) Do most people around the world transmit CW in English? If not, does an alphabet exist for other languages such as Arabic or Russian?

4) Can CW be legally transmitted by computer? i.e, you know CW, and are licensed to transmit this mode, but

you prefer to have the software send the information. What about all the nasty hum generated by the computer? Is that frowned upon?

Thanks in advance, and please be gentle with me -- I have been studying for only a few weeks and may have made a total fool out of myself asking a question above.

Thanks in advance,

and, (let me give this a try) good listening and 73s.

The reason for a fuse in the negative lead is that if the ground connection from the battery to the car chassis were to become open or intermittent, the starter motor would try to draw current through the ground to your radio via your coax back to the antenna. I've seen pictures of what several hundred amps can do to a radio, and it ain't pretty!! If you draw out the schematic it will become clear where the current paths are.

Actually, there's a better way to protect your radio, and that's to install a capacitor in the lead connecting the braid of your coax to the car's chassis. That way, you don't have to depend on a fuse blowing -- the starter current simply won't flow in the first place. A .01 uF disc ceramic should do the job at most ham frequencies. Also, DON'T add a separate ground wire from your radio to the car chassis, unless you use the capacitor there, too.

As for the size of fuse, if the 18 amp max draw is intermittent (SSB or CW), I'd use a 20 amp fast blow fuse. If it's continuous (AM or FM) I'd use a 20 amp slow blow type. If you experience fuse blowing for no apparent reason, go up 5 amps.

>1. Why both leads? Most (if not all) cars are neg ground
> anyway. What protection does this offer when the pos is
> fused?

The positive fuse will protect the positive side of the feed (fuse
should be as close to the power source as possible). If this lead
comes in contact with any "ground" down stream, it will blow the fuse
rather than short, and possibly catch fire.

The negitive side acts the same way...think for a moment if your neg lead
was not fused, and came into contact with a positive source (unfused), the
wire(s) would short, and continue to do so, resulting in damage and/or
fire.

>2. If the equipment draws 18A max, what fuse should I choose?
> I assume that I would choose a slow-blow type and I'm guessing
> about a 10-12 A fuse in each lead?

With the newer transistorized equipment, I would not reccommend a "slo-
blow". Faster response here is crucial to protect the equipment.

If you put in anything lower than the max draw, the fuse will blow when
the device is at max draw. If the device's draw is 18 amps max (consider
peak too!), a 20 amp fuse would be recommended.

>Thank for your advice. Please forgive me if this is a silly
>question and I appreciate your patience.

My father always said, "There no such thing as a dumb question...if you
dont know the answer." With that, theres no such thing as a 'silly'
question. :)

>
It may have been in real Morse code, not the "International" code now
in use. When I hired into the Phone Company in 1970 there were still
a number of guys around who could send and receive Morse code. One
would even copy solid if the two were mixed.

There are more than dots and dashes, there are long dashes and the code
set is quite different.

>Europe because of the FM tuner? any comments?

Gee, an honest dealer, hang on to him. The dealer is right. US Standard Broadcast is on 10 kHz channels, European Standard Broadcast is on 9 kHz channels, so the radio won't work right for AM. And on FM Broadcast, US stations operate on 200 kHz channels set on odd 100 kHz boundaries, IE 96.1, 96.3, 96.5, etc. In Europe, FM stations may appear on any 50 kHz boundary, so the US tuner won't be able to tune them properly. In the days of analog tuners, this didn't matter, but with the near universal use of digital synthesizers in car radios today, it does matter now.

Now some Japanese and European import radios sold in the US market can be modified (often just a keypress combination or a zero ohm jumper change, like with our amateur radios) to work with the European band plan, but others can't. If you aren't sure the radio you are considering has this ability, don't buy it for use in Europe.

There are other reasons, too. They may just be trying to get your credit card number. You may never get any merchandise while they charge your card to the limit.

What I normally do is hang up on people as soon as I realize they are selling something -- no "not interested", no "f___ you", just a hangup. Occasionally though, I have tried to catch them off guard.

One of the best was the time a saleswoman asked for Mrs. Johnson. I replied that she couldn't talk to her because she was being punished and was not allowed to speak to anyone at all.

>commonly either former professional 'sparks' or old timers.

These are good points. Those amateurs who claim Morse is easy to learn forget that they are a self-selected sample. Those who found Morse very difficult usually never became amateurs (at least prior to the recent code test free Techs). A relative few people who found Morse very difficult persisted for the months or years needed to pass the test (it took me 13 months with a couple hours practice a day for example), so the average amateur doesn't think learning Morse is a problem because most of those around him in amateur radio typically didn't find it difficult. That's the self-selection factor at work.

I hear some of you saying, "So what, if they want to be amateurs they'll put in the work." That would be a reasonable attitude if Morse were still an essential for amateur communications, but it no longer is. Neither the ITU charter nor our US Part 97 define amateur radio as a Morse communcations service. Morse is merely one of many techniques amateurs can use to explore radio communications. CCA'34 says that the FCC must craft regulations to make available to the public access to radio communications "to the greatest extent practical". Applying what is now an irrelevant barrier to amateur licensing is not in keeping with the spirit of the law.

> fused?

The negative lead fuse is there because the battery frame strap can corrode or fall off. If this happens, full starter current, 200+ amps, will try to flow through your radio wiring negative lead, through your radio, and on to a body ground connection at your antenna. The radio wiring, and the circuit board traces in the radio, can't handle this current, so a fire, or at least radio damage, is a likely result.

In a typical modern amateur radio, the negative lead isn't connected directly to the radio chassis. Instead it connects to a circuit board trace internally. That may eventually find its way to case via the output coax connector, or it may not, depending on the particular radio design, but for sure the full current is going to attempt to flow through at least part of the radio's circuit board printed wiring to find its way to body ground.

And BTW, the reason you want to run a negative lead to the battery at all instead of just using a convienent body ground for the negative current return is that this latter method creates a ground loop. The negative lead will be elevated by the IR drops of all other current consuming loads on the auto which use a body return, and that will modulate what the radio sees as its ground reference. This will induce various electrical noises and spikes into your sensitive radio circuitry. By running negative direct to the battery, this potential ground loop is short circuited.

>2. If the equipment draws 18A max, what fuse should I choose?
> I assume that I would choose a slow-blow type and I'm guessing
> about a 10-12 A fuse in each lead?

Kirchhoff's law says the same current flows around the entire mesh, so you need fuses sized for the total current draw of the radio. For an 18A draw, a 20 amp fuse in each of the hot and negative leads would be appropriate. The fuses are effectively in series for the current loop, not in parallel, so each has to be rated for the full current draw. Slow blow types are not required. The circuit board

traces in your radio aren't slow blow, so neither should be the fuse. (If the radio has a high peak to average current draw, say it's a SSB transceiver, then you may want to use a slow blow fuse rated for the *average* current draw and depend on the slow blow feature to handle the momentary voice peaks. Consult your radio's documentation for the recomended fuse.)

2359. Help locating source of Texas Instruments components

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-18 00:00:00 UTC
From: keith@fc.hp.com
Message-ID: <48kriq$d8e@fcnews.fc.hp.com>
Source record: 235310

I am trying to locate a source for what I think are some components made by Texas Instruments. The manufacturer's part numbers are TIL-32 (which is an LED) and TIL-78 (which is a phototransistor). Could someone direct me to a catalogue/electronics supplier that might have these parts?

Thanks for your help!

In article <48j3d0$646@lehi.kuentos.guam.net> norman@saba.kuentos.guam.net (Norm Collins) writes:
-I have noticed that almost all installations of mobile radio
-gear tell you to fuse both the Pos and the Neg lead going to
-the battery. Two questions:
-
-1. Why both leads? Most (if not all) cars are neg ground
- anyway. What protection does this offer when the pos is
- fused?

It is to prevent a problem if the cable from the negative of the battery to the vehicle body opens. If that happens, all current, including the heavy starter current would flow thru the radio and it's cables, causing damage and a possible fire. The circuit would be:

Bat + --- starter --- car body --- radio chassis via mounting screws or antenna coax braid --- negative wire --- fuse --- Bat -

With the fuse there, hopefully it will blow before the radio... The fuse in the positive lead is, of course, to protect against shorts either in the radio or the postive lead itself (iw. where it passes thru the firewall)

200% increase in activity. Ham radio was dying on the vine prior to restructuring the antiquated coded-license.

If you can find a CW key jack on an Alinco, Icom, Kenwood, Radio-Shack, or whatever, VHF/UHF/SHF radio, I'll say we should go back to the bad old days, and run CW based licenses again.

>Only a fool would want the same for HF.

I have an HF radio. I listen to it. I listen to what is going on and try to decide if I want to participate. Will studying 13 wpm and upgrading, give me pleasure I ask. From what I can tell, the HF bands are a cesspool of the failed Great Society. 1 out of 50 conversations I listen to are interesting, and well done. The rest are retired old white men, who hate all other races, are mostly democrats, and can't stand anything.

It's a non-issue. Real men aren't going to spend $2k to get on HF, code or no code. They may spend $50 to build a CW rig. But SSB is a wasteland. I think the ARRL should abandon all awards. Having done that, it would remove from the bands the awful non-communications bad habits.

Annoying is a matter of opinion. I get many messages that think I am a great poster, lots of humor. It is OPINION. BUT the poster from MEOL was representing Mass. Ed. ON LINE and had no right to post HIS opinion on taxpayer time. He is giving OFFICIAL sanction and thus has gone too far. What if I a said on here that one of my students was a slut, named her and could prove it? Would that be ethical?

2374. Coherent distributed RF system

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-19 00:00:00 UTC
From: c-three@telepost.no
Message-ID: <48nimo$e1@nms.telepost.no>
Source record: 235194

I have earlier posted a question regarding the following under the subject "Transferring HF ref. signal over long cable". I realize that this original posting did not properly describe my actual problem. Even after having put "garbage in", I tend to get some very "interesting info/ideas out" :). I will now attempt to describe the situation a bit better, hoping to stirr up some more of your good ideas - this time even better focused on my situation ;).

Our system is a physically distributed one. It consists of a master site and several slave sites. The distance from the master to each slave is typically within 1-3 km. Each site can contain a Tx and/or an Rx. At the master site, a reference signal at 10 MHz is being generated. This signal should also be used as a reference for all the remote slaves.

The transmitted signals are reflected/scattered from "some" physical entity (sorry, can't go deeper here ;)!). The receivers are constantly monitoring the signals. The information we are interested in are found in the phase and magnitude varyations caused by this physical entity. The phase varyations we are interested in could be *very* small.

Since the transmitted signal is not perfect, it will introduce "fake" variations in the received signals. In order to acertain that the data we are producing is real, we would like to compensate for the fluctuations present in the transmitted signal. If the total system was driven by *exactly* the same reference, we would have a coherent system. By "coherent subtraction" in the receiver, we would be able to accomplish our goal.

So, how do we achieve such a coherent system? How do we transfer the master reference to each site, while preserving the "impurities" that are present in this signal? We have ruled out radio transmission, since that signal would also be exposed to random varyations introduced by the signal path. In fact, this signal would be influenced by the same "physical entity" mentioned above.

Clearly, we are not only interested in a precise frequency reference (ie. rubidium ref.), but we want to use the *same* reference all over the system. If the reference is being transmitted, it is not the same anymore when arriving at the other end. Noise has been introduced, and to different degrees on the different paths to the different slaves.

Regards,
Per-Tore

The repeater is operating under automatic control, and it is the automatic
controller which is keying the repeater, as you programmed it to do, in order
to report a status change it has detected. It's telemetry.

I learned CW in the Navy in 1971 at Pensacola, Fl. We went from no code whatever to 35wpm with random blocks of letters and 40 wpm random blocks of numbers in about four and one-half months, working from 7:00 am to noon and 1:00 pm to 4:30 pm five days per week, and then two hours of mandatory "night school" each evening and on Saturday.

While I was there they introduced a computer-focused learning system to teach the code. It increased the speed at which people learned the code, but when those people were then exposed to recorded tapes of real people sending code, they had a great deal of difficulty in copying. Seems the perfect code with no static or other noise, as sent by the computer, was a little different than trying to copy the real McCoy!

To my knowledge, that school ones like it for the Army and Air Force still exist. The Navy has not taught radiomen CW for about ten years or so now, and I don't know of other schools which teach sending CW in the military. You can figure that one out for yourself.

In regard to the gent who was a Keesler AFB and the "ditty-bops" left before "passing local water," I would suggest that this was pretty unusual. In the front of the room where I heard my first "official" CW (sent by a crusty old Warrant Officer, with a hand-key at about 5 WPM, with everybody yelling out, "ALFA!") there was a sign about six feet wide and a foot high with bright, red letters. It stated, in usual Navy brevity: YOU FAIL, YOU SAIL.

Word was that if you flunked out (and about 40% did, by the way), you were issued a paint chipping hammer on the way out the gate.

To graduate from the school you had to copy CW pretty well. They sent a block of fifty five-leter (or five-number) groups. They substacted two points for each incorrectly copied letter/number, and one point for each missed character (represented by a period on the your paper in the correct spot). Passing was 85 "percent" but if you incorrectly copied eight letters/numbers out of 250,

you failed. That works out to a passing score of more than 97%, if my math is right (which is anything but a "sure" thing!).

When we left school and went to our first duty station, the first thing we were taught to do was "really learn how to copy CW accurately and at some reasonable speed." In my case that meant about 45-50 WPM on HF circuits with no errors. Never quite got to the point I could copy with no errors, but I could stand for the CT program to work at above 50 WPM in the contests!!

Long, drawn out response, but it brought back a lot of memories for me, too!!

: poster mentioned, it just weighs you down. Go & enjoy the magic.

: Rick - NH2F

IMHO, having a 11 year old son licensed (KC5JIE) and a lightweight HT was incredibly useful. We were able to let him run around in large crowds at Disneyland without losing track of him. It helped coordinate which rides, meals, etc. we were going to do and when.

We used miniature lapel mikes, about the size of a lima bean, and $1 walkman type stereo headsets. The HT's were in a little pouch and were unobtrusive and hidden from view except the antenna (and relatively resistant to water splashes....).

We didn't really look to make any other contacts, although when we did talk, other visitors would call us to chat. If we were just standing in a line that wasn't a problem, but sometimes we'd be preoccupied with the fun and we'd cut the QSO's short.

Hello all...

Do anybody know how 2 build a voice-mailbox using an external selfmade switching-option and a standard soundcard in your computer ?

I heard from some hams that there are construction-plans and software available...but I do not know where.....

Please help...

That the ARRL does the amateur community a lot of good is undeniable. I would however, not be a ham today, if the ARRL had had there way. I will join and support the ARRL, when they start listening to the growing majority of ham operators. I will not give my money to a group whose primary purpose seems the preservation of Morse code. I would advise other No-codes the same. They will listen to there purse, long before they listen to your dissatisfaction. That means no ARRL repeater manuals, no books, courses, etc. Thats what I am doing.

1.3 Where could I find L.O.S.A ?
1.4 List of contributions.
1.5 Credits and other things.
```

1.0 What is BASIC Stamp ?

BASIC Stamps are small single board computers (SBC) that run BASIC programs and are made by Parallax, Inc. in US. At first glance, they may seem fairly minimal - and in fact, they are. But with software that fully utilizes all available hardware, the Stamps give you powerful features - without the cost of hardware. Their low cost and simplicity make the Stamps perfect for many prototyping and control applications. And are suitable for electronics hobbyists as well as electronics professionals in many different areas.

1.1 What is L.O.S.A all about ?

I started to compile L.O.S.A because I know there are lots of great ideas and many problems that are solved with the BASIC Stamp and the main purpose of this list is to get an idea of what other people are using their BASIC Stamps for and maybe get some inspiration or hints.

Remeber it's up to all of us if this list are going to be any good and I'm looking forward to receive a description of your application.

1.2 How can I contribute to this list ?

If you have done something with the BASIC Stamp (big or small) that you are willing to tell others please use the form given below and

write a short description, nothing fancy is needed just a simple
explanation. If you have source code to share that's even better but
it's not necessary.

Then e-mail the form to:

cj@algonet.se

With the following as the subject:

L.O.S.A Contribution

Or you could point your Web-browser to the following URL and fill in
the L.O.S.A form on the Web-page...

http://www.algonet.se/~cj/losa.html

[--- cut ---]

==
Title : Logic Rudder [# 001]
==
Date : 950812
Author: Christer Johansson
E-mail: cj@algonet.se

Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : LRUDDER.ZIP
URL : Soon to come

Description :

Many of the new and very realistic flight sims available today needs
rudder to let you get full control. This one uses a digital pot from
Xicor (X9104) and 10 other components. Connects to a standard IBM-PC
game port and power is taken from the port.

It uses two micro switches for controlling the rudders left or right
and to indicate when rudders move there is a red LED that lights up
when you press the micro switches and to indicate center there is a
green LED. If you press the both micro swithes the rudder will auto-
maticly return to center position.

There is a trim pot to set the desired step rate from slow to very
fast and the Xicor pot has 99 steps wich gives a fairly resolution.

==
Title : Interfacing MAX186 8 channel 12bit A/D [# 002]
==
Date : 950925
Author: Helmut Fligge
E-mail: h.fligge@asco.nev.sub.de

Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : N/A

Description :

This Program interfaces the Stamp1 to the MAX186 A/D converter. Via
RS232 2400bps the stamp is asked to measure channel numbern. After
conversion the result will be returned to the host computer as an
ascii string (0 .. 4096). Conversion rate is about 4 measures per
second.

==
Title : Scrolling LED Sign [# 003]

```
=========================================================================
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Maybe sometime
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html
-------------------------------------------------------------------------
Description :

Scrolling LED sign, 35 super-bright LEDs in a 5-by-7 matrix in the
prototyping area of a Basic Stamp rev D. A scrolling alphanumeric
message moves one pixel at a time, just like real scrolling LED
signs, except this one only displays one full letter or portion of
two letters at a time as the message moves by.

=========================================================================
Title : Tone Decoder [# 004]
=========================================================================
Date : 950926
Author: Bob Blick
E-mail: Bob_Blick@redwoodfn.org
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: Soon
Filename : N/A
URL : http://www.execpc.com/~bblick/stamp.html
-------------------------------------------------------------------------
Description :

Listens for telephone touchtones, displays phone numbers on LCD
screen and echos them out RS-232 port. Circuitry fits in prototyping
area of rev D Basic Stamp:

Microphone preamplifier, touchtone decoder IC.

=========================================================================
Title : Pager [# 005]
=========================================================================
Date : 950928
Author: Don McKenzie
E-mail: donmck@tbsa.com.au
-------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D
Code available: YES
Filename : PAGER.BAS
URL : ftp://ftp.parallaxinc.com
-------------------------------------------------------------------------
Description :
```

This program for the Basic Stamp is used to monitor 4 hardware signals. If a change takes place, (after testing for a false trigger) then a cheap 2400 baud MODEM is used to dial into a Telecom Alpha-Numeric pager. It leaves a message which consists of a 2 digit I.D. (01 to 99) followed by the 4 signal levels of pins 3 to 0.

Status of the signal levels message: 0=Low, 1=High. EG: "011110" means Unit "01" has pins 3, 2, and 1 high, and pin 0 is low.

A "Ring-In" feature is also included. By ringing the MODEM for a short period, then hanging up, the Stamp will dial your Pager and report the current hardware status of these four signals.

This program uses about half of the available memory, so if the user wishes to add enchancements such as "Multiple Ring-In's" say within a minute, for a command selection, there is plenty of program space left.

```
=============================================================================
Title : HexWalker Mobile Robot [# 006]
=============================================================================
Date : 950929
Author: T. R. Thornton
E-mail: mandtsys@ix.netcom.com
-----------------------------------------------------------------------------
Stamp model : BASIC Stamp Rev. D or BS1-IC
Code available: YES
Filename : WALK.BAS
URL : N/A
-----------------------------------------------------------------------------
Description :
```

HexWalker is a six legged mobile robot that is controlled by a BASIC Stamp or BS1-IC, and driven by three servo motors (similar to Futaba S148). It is the simplest walking machine architecture that can walk forward, backward, and turn left or right.

```
=============================================================================
Title : Robo Bug [# 007]
=============================================================================
Date : 951003
Author: David Novick
E-mail: dkn@cimar.me.ufl.edu
-----------------------------------------------------------------------------
Stamp model : BS1-IC
Code available: YES
Filename : N/A
URL : http://www.me.ufl.edu/~dkn
-----------------------------------------------------------------------------
Description :
```

Using two stamps, a robot with six legs (2 degrees of freedom each) was able to walk and turn (at this stage, not very gracefully).

```
=============================================================================
Title : EXPBOT Robot controlled by Stamp [# 008]
=============================================================================
Date : 951009
Author: Marvin Green
E-mail: marvin@agora.rdrop.com
-----------------------------------------------------------------------------
Stamp model : BASIC STamp Rev. D
Code available: YES
Filename : EXPBOT.BAS
URL : E-mail author and he will send it
-----------------------------------------------------------------------------
Description :

This program allows a cool robot to move abound a room in search of
light. Like a moth. Simple program changes can dramatically change
the robots behavior.

=============================================================================

1.5 Credits and other things
----------------------------

Credits should go to all of you who makes this list possible I hope
it suffices to say "Thank you to all who have contributed to L.O.S.A
- we all appreciate it."

Special thanks to all of you at Parallax, Inc. who makes and support
this great products !

If there is anything you think I've missed (or spelled wrong <g>) I
would love to hear from you so we could make this list even better.

You could reach me at the following e-mail address: cj@algonet.se

Stay tuned,

/Christer

Actually, that changes you between 1 Hz and 10 Hz tuning steps. However, there is a way to get 100 Hz (and several other) step sizes. The fine manual explains it on page 17 as I discovered on rereading it. Just push TS until the marker is over the kHz digit, hold it for 2 seconds, and you're in a menu that lets you select 0.1, 1, 5, 9, 10, 12.5, 15, 20, or 100 kHz tuning steps. Whew! They didn't leave out a thing.

>>For those who like to scan VHF Hi-band, we've discovered a mod that
>>restores sensitivity, but at the cost of reduced sensitivity below
>>120 MHz.
>
>Could you post this mod here or via E-Mail?

This is the "yellow wire" mod, but one of my correspondents has found a better way that actually allows the filter to switch at the corner frequency (apparently around 129 MHz) as you tune. Now PROCEED AT YOUR OWN RISK, there are no guarantees you won't trash your radio, this is reverse engineering with no schematics, Icom doesn't warrantee this mod, etc, but here's the mod anyway. :-)

Remove the radio top and bottom covers according to the manual. Remove the speaker. Now with the radio facing you and right side up, you'll see a single connector with discrete wires at the rear of the control board. The fourth wire from your left should be a yellow wire (caution, the 5th and 6th wires on the other end of the connector are yellow too, don't get confused). Disconnect this wire from the connector. This will enable the 2 meter pass filter outside the 2 meter band, and will restore sensitivity between about

130 MHz and about 165 MHz (above and below that range, sensitivity still stinks, especially above 165 MHz). Before this mod, a low pass filter with a corner frequency around 129 MHz was in the circuit all the time except when you were actually tuning inside the 2 meter band, and that killed high band sensitivity completely. Before removing the yellow wire, sensitivity at 155 MHz was 30 uV for an S1 indication, after the yellow wire is removed, sensitivity increases so that only 0.5 uV is required for a S1 reading. At 165 MHz after the mod, sensitivity is 3 uV for an S1 reading, before the mod, a very large signal (more than I wanted to feed into the radio) was required for an indication.

Disconnecting the yellow wire has the unfortunate side effect of reducing sensitivity between 60 and 129 MHz since the radio never switches from the 2m bandpass filter to the low pass filter. Signals below 60 MHz don't go through either filter and are unaffected by the mod. Now here's how to get the low pass filter back when tuning below 129 MHz. On the bottom board, right behind the MENU button, there are 5 SMD transistors. These transistors apparently switch the VCOs for the various band segments. The one in the middle of the 5 apparently switches the 60-129 MHz VCO. The single pin (one side of the SMD transistor has 2 pins the other only 1) switches to 5 volts when this VCO is active, and is low otherwise. This is exactly what we need to feed the yellow wire. There's a board trace coming from this pin over to a feedthru hole near J8. Connect the yellow wire you disconnected earlier here.

The filter should now toggle between low pass and 2m bandpass as you tune below and above 129 MHz, and you should have good sensitivity both above and below this frequency (at least up through 165 MHz).

Remember, CAUTION WARNING and all that trash. This is tiny SMD stuff. If you trash your radio, you're on your own. Thanks go to our correspondent from Finland, whose call I do not know, who discovered this latest mod, and to WB6JDI for relaying it to me.

A final PS to all you mod freaks. There may be *a better way* than this mod to restore high band sensitivity. If you're a worry wart, or unsure of your skills working with tiny stuff, wait for the schematics and board layouts to come out on the radio. Icom says January. Then we may find a better way. If you're brave of heart, then happy mods to you.

Gary

2390. Mods for Icom IC-736

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-19 00:00:00 UTC
From: yingst@knighted.com
Message-ID: <48lstq$17m@crier.knighted.com>
Source record: 235323
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Does anyone have any mods for the ICOM IC-736?

I'm looking for a way to turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna).

I'm also looking for a way to improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.

They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).

I had a IC-737 that had the same problem with the audio,
just not sounding quite right.

I am also interested in any other mods for the Icom IC-736.

Please send any replies to yingst@knighted.com

Note: If you post a reply into this newsgroup I probaly wont get it,
my internet provider only holds news for 1 day.

Thank You. Harry N6VUJ

2391. 2 Meter Intermod Cure

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-19 00:00:00 UTC
From: Bootlegger@msn.com
Message-ID: <00001fef+00002e37@msn.com>
Source record: 235324

I just purchased the PAR Electronics VHFDN152 Two Meter Intermod Filter.
I was unable to enjoy using my Icom IC-2700H dual band radio, due the the
severe intermod I was receiveing from a local paging system. This intermod
completely covered several local repeaters, and made them virtually useless
during the day when the paging system was most active. I read a review on
the PAR Filter in the October '95 issue of "CQ Magaize", and I called
them right away. I spoke to Dale Parfitt WA2YPY, and he recommended
that I try their new filter. Dale describe the filter as a passive
type device with a low insertion loss,typically about .3 db. He told
me that it would work with my dual band rig and was rated for up to
50 watts. He also told me that if I wasn't happy with the filter, I
could retrun it for a full refund. I ordered the filter from him and
I received it several days later via UPS. I was shocked and amazed at
the results. It totally elliminated my intermod problem, but yet it
still allowed me to monitor freqencies between
135 and 174 Mhz. The filter is rated for about 50 db of attenuation
for frequencies between 152 and 154 Mhz. This seemed to block the
offending paging interfence,thus allowing me to hear everything that
I was missing before. If anyone else has trouble with intermod, I
highly recommend this filter as a potential cure. The filter cost me
$62.00 plus $4.00 for shipping and it was worth every penny!!!

The telephone number for PAR Electronics is (407)586-8278.

Talk to the repeater owner, the one I use blocks DTMF tones unless the
first one or two are the code that tells the repeater to pass the tones so
you can use DTMF squelch. For example, you may need a # and a 6 to
tell the repeater to pass the tones, so to send 54321 you enter #6 and 54321.

I've never heard anyone use "Q5" on cw. The "Q" codes have some merit
on CW, but i'd bet this "Q5" stuff is more of the 10-4 good-buddy
language that is so prevalent now on the ham bands. Years ago the
hams i know called ops that used "Q" codes on voice lids. Now it's the
norm. "We be "Q5" and 10-100 here. Destinated an' on the side
standin-by - roger -"

Hi I was wondering if any ATV QSO's are happening in the Troy, Michigan area. I've monitored for a while and never heard (or seen) anything. I know there's an ATV repeater 30 miles from me but I thought simplex would be better first. Thank you. - Chris N8UDK

Can you tell us whether the physical entities vary with time or are "stationary" in the statistical sense? In the former case, you could do a lot with averaging; in the latter case, you are out of luck. If the entities change rapidly with time, you may have no choice but to get extremely low noise references and not depend on using common mode techniques to cancel noise. This is because if both the noise and the distubance are changing with time, you get non-cancellable cross-correlation products.

Another idea that comes to mind is a "differential" measurement. Send a signal from station A to both B and C, and compare the AB with the AC path. Then noise on signal A is common mode. Or compare AB with BA (two way measurement). Excuse me if you've already thought of this.

JPL uses an interesting concept for Very Long Baseline Interferometry (VLBI). They have stations in California and Australia simultaneously record the noise from a certain quasar on high speed tape recorders that are time stamped with cesium/H-maser clocks. The tapes are sent back to Pasadena for analysis and they use the time difference between the tapes to measure the distance between the stations to a centimeter or so. This allows them to monitor continental drift (plate tectonics).

Our experience has been that the world is moving away from distributed reference systems as you propose and towards local references with a means of sychronization.

Far from it. There's a legal requirement that residential service
recipients MUST be able to disable the blocking. Just ask your phone
company for instructions.

Right now the price shouldn't exceed $50.00 but keep it for another 20
years and you can probably name your price. The DX-35 and DX-100 are
quickly becoming much desired "classics".

Ohio/Penn DX Bulletin No. 231

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 231
BID: $OPDX.231
November 19, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N3ADL, K4CEF & Southeastern Cluster Group, AA4LI, WD5N, KT6V, NM7M, K8PYD, NW8F, W9VNE, K0IR, DF4RD, DL3DXX, EY8MM, JA1BK, JA6VZB, JH1ORA, ON6TT, VE9RHS, NPDXG News Bulletin and G4BUE & The DX News Sheet for the following DX information.

4U/KC0PA CARD UPDATE. Rudi, VE9RHS, reports he has finally received the logs from Tim (4U/KC0PA). Tim's computer is still down, but he has managed to retrieve the logs after a lot of monkeying around with the machine. Rudi mentions that he has crashed his system, but has managed to get his machine to copy the logs to paper. He is now in the process of trying to clean up the back log that he has on hand. There is at least a 1500-2000 card back log, so it will take a few weeks to catch up, and he is hopeful that some cards would be going out this past weekend. So please be patient; all cards will be answeres ASAP.

4U1ITU, ITU HQ. A Group of German radio amateurs (DK1BT, DK7YY, DL3DXX, DL7UBA, DL7URH and DL7VOA) will be active from 4U1ITU during the CQWW CW Contest. QSLs for this activity are OK via DL3DXX, direct as well as via bureau. Dietmar, DL3DXX, states he still has the logs for 1994 CQWW CW Contest.

9L, SIERRA LEONE. Paul, 9L1PG, is currently stateside on vacation until December 15th (on or about). Paul bought a new rig and a amplifier to take back to Freetown with him. Also, Cecil, NW8F, has sent antennas for 80-40 and 12 meters which should arrive the same time Paul does in Freetown. So begin looking for 9L1PG on the low bands in mid-December.

AH0, SAIPAN. JA6VZB, JR7OMD and JI3ERV, members of the Diamond Project Team, will participate in the CQWW CW Contest as a Multi-Op/Single-TX entry using the callsign AH0T. Activity seems to be centered only on 160 meters (1824.5 and QSX up 1830-35 for EUs, 1910+- for JAs, NAs ???). QSL will only be accepted via bureau to JA6VZB.

EY, TAJIKISTAN. Nodir, EY8MM, reports that EY2Q will be active in the CQWW CW Contest as a Multi/Single category. QSL via EY8CQ direct or to the TARL QSL-BURO: Box 303, Glavpochtamt, Dushanbe, 734025, Tajikistan, CIS. Meanwhile, Nodir states this winter he will be active on 40 and 80 meters (as well as 160 but not so active) looking for NA stations. Look for him on his sunrise (East coast) and his sunset (West coast). He will be happy to make skeds via E-mail: ey8mm@tarl.td.silk.glas.apc.org

FT5, KERGUELEN. FT5XK has been heard active on 20 meters SSB working Europeans on 14136 kHz around 1600z. QSL via F6KQD. According to the NPDXG News Bulletin, FB1LYF will staying for one year on the island and that he will be using the callsign FT5XL. His expected activity of operation will be CW , SSB and RTTY.

HC8, GALAPAGOS ISLANDS. Operators WN4KKN, WX3N and AG9A will be doing a multi-single effort in the contest next week. Their callsign will be HC8N. QSLs for HC8N and WN4KKN/HC8 via AA5BT, the others via home calls.

HP, PANAMA. Ellis, AA4LI, will be active as AA4LI/HP1 the first two weeks in December. He will concentrate mostly on CW operating on all bands. His activities will be limited to the evening hours (probably from 0200-05000z) daily, because he will be working during the day.

"OD5ZZ & OD5RAK" QSL, WHERE ARE THEY? Dwaine, WA8MEM, reports he was supplied with a certain amount of QSL cards by Walid, OD5ZZ, and has apparently run out. Dwaine talked with Walid in early 1995 and told him he was out of cards and needed log sheets to confirm cards. Walid stated that he would be sending Dwaine some more cards for OD5ZZ and OD5RAK plus certificates to send out for the OD50RAK special event. Since then Dwaine has been trying to contact Walid again by phone and InterNet, but with no success. Dwaine has now announced he will no longer be the QSL Manager for OD5ZZ, OD5RAK and OD50RAK because he has run out of time and patience. Stations that sent Dwaine return envelopes and postage will be getting their cards back soon. All other stations that sent their cards via the bureau will have to resend them again once a new route is announced. Dwaine wants to thank all the DXers for their patience and is sorry that he couldn't provide a card for those who needed it for a new one. As a DXer himself (Dwaine) states he knows how it feels not to get a card that you need for a new one.....

P5, NORTH KOREA. The DXNS reports that there is a rumor floating around stating that Zorro, JH1AJT, has a licence to operate.

QSL MANAGER CHANGE. Doug, N3ADL, reports the QSL route for the V26DX operation before and after CQWW SSB Contest has been changed. QSL to KK3S, Jacobus "Koos" Berrevoets, 160 Valley Road, Windsor,Pa. 17336. Cards are at the printers now and should be done in a week or so. All QSLs that Doug has received will go to Koos for processing. NOTE: Doug states he has been receiving many QSLs for V26B, which WT3Q is the correct route not N3ADL.

TU, IVORY COAST. Peter, ON6TT, will be leaving on November 21st for TU on a 4 week Red Cross mission. He did not state what call sign would be

used, but he did mention most of his equipment is still in VK6-land (ed. probably to be used for the VK0/HI DXpedition) so do not expect too much activity during this mission.

V3, BELIZE. Tom, KT6V, will be active as V31UA plus be a single op all band entry during the CQWW CW Contest. There will be activity before and after the contest on the WARC bands. QSL via home call; Tom Mortin Jr., 230 Emilia Lane, Fallbrook CA 92028.

VH0, MACQUARIE ISLAND. Last weekend, reports of a station signing VK0MI, which claimed to be active from Macquarie Island, turned out to be the work of a pirate. But good news was reported by Bob, NM7M, who talked to Greame, VK0GC, and states VH0WH, Warren Hull, will be arriving on Macquarie around the end of November and will be there for the full year. You may recall Graeme from earlier SSB operations on the island.

VK0, HEARD ISLAND DXPEDITION (UPDATE). As reported last week, this DXpedition was hit with something unexpected in Australia. The owner/operator of the "Tallarook", a Mr. Kris Mitchell of K & DM Transportation, misrepresented his vessel and the advance team of ON6TT and PA3DUU found that the charter vessel was unsuitable for a voyage into the southern ocean. According to team leader Ralph, K0IR, the DXpedition is now postponed for a year. This is due to the losses resulting from their encounter with Mr. Mitchell which were substantial. They exceed $100,000. However, no contributions sent to The Heard Island Expedition; P.O. Box 163; Waite Park, MN 56387 have been spent. Checks have not been cashed. Contributions will all be returned to those who sent them.
In addition, funds from the NCDXF and INDEXA remain untouched. The Heard Island team members have paid the loss out of their own packets because an acceptance of risks was a prerequisite for becoming a member of the Heard Island team. Ralph has announced that he doubts his schedule will allow him to participate in an expedition a year from now, so KK6EK and ON6TT have assumed the leadership role in developing future plans.
SPECIAL NOTE: The above was an excerpt from Ralph Fedor's, K0IR, press release. InterNet subscribers to the OPDX Mailing List will receive an additional bulletin containing Ralph's complete press release.

VP5, TURKS & CAICOS ISLANDS. Operators KW8N, N9DX, W0CG, WD8AUB and W9VNE will be active as VP5FOC in the CQWW CW Contest as a Multi/Multi entry. All QSLs for the operation should be sent to W9VNE:
P.O. Box 54482; Cincinnati, Ohio 45254-0482.

WP2, U.S. VIRGIN ISLANDS. Dave, WD5N, will be operating as WP2AHW from St.Croix, November 21-28th. Activity will be on all-band plus an effort in the CQWW-CW contest. Outside of the contest he will concentrate on WARC bands, the low band and operating on CW. QSLs via WD5N.

XZ, MYANMAR. JA6LDD, JH1KRC and JA1BK will once again operate as XZ1A during November 22-27th. They will be on 160-10 meters including WARC bands with 3 stations active at the same time. They are planning to concentrate on 160 meters November 22-24th, and also be an entry in CQWW CW Contest. QSL via JA1BK. Kan requests please do not use registered mail

or special delivery. The correct address for JA1BK: Kan Mizoguchi,
5-3, Sakuragaoka 4 Chome, Tama-City, Tokyo 206, JAPAN.
QSL labels for XZ1A will be printed by computer after the log is entered
and four QSO data will be printed on each label. Only one set of labels
will be printed. This is to protect the integrity of the QSL process.
Second QSLs will not be issued for this operation. Multi-band QSLs must
be requested in ONE envelope only. Please don't send requests for
separate band, mode, etc. in a separate envelope. SPECIAL NOTE: InterNet
subscribers to the OPDX Mailing List will receive an additional bulletin
containing Kan's complete press release.

ZL7, CHATHAM ISLANDS (UPDATE). Remember to look for Jon, WB8YJF, and Leo,
K8PYD, using the callsigns ZL7CW and ZL7PYD, respectively, possibly as
early as Tuesday morning (EST). There will be activity in the contest.
Also, they work as many stations as they can on 160 meters.

SPECIAL NOTE FROM EDITOR: There will probably be no bulletin next week
(November 27th) due to the contest and holiday weekend. Please keep
sending your DX information. (You never know, I may put one together
if I receive enough information before the weekend.)

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with
the Sysop or send InterNet Mail to one of the three following addresses:
kb8nw@barf80.nshore.org / aq474@cleveland.freenet.edu / DFJH48A@prodigy.com
- OR - Send a message via packet to KB8NW @ WA8BXN.OH.USA.NA
- OR - Use the VOICE or FAX answering machine at 216-237-8208 which
shares the same phone line as BARF-80 BBS using a data/fax/phone switch.
To access: 1) Dial Number. 2) Wait for first ring (the second ring should
be a false ring from the fax/data switch box) and then dial four quick
ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every
second will not have to do this step.) 3) The phone will pick up and
after the "BEEP" leave your voice message or FAX.

To the best of my knowledge 800 MHz capable radios are no longer available in the US. In Canada, however, it's a different story. I'm not familiar with the 732, but if it's a base, consider buying a Radio Shack Pro-2006 if you can find one.

Michael:

Is it possible they were using the repeater to do the id'ing for them? Since they are in effect a "special event" with what I would assume the repeater owner's (Club's???) permission...would that satisfy the id/control point questions? Could they be using the club/repeater's call sign? I assume the repeater id's every 10 minutes or less, either in code or synthesized voice.

If the radio is wired directly to the battery and the battery's neg.
cable opens, the NEW return path is through the moutning bracket of
the radio or from the shield of the antenna to the radio and back to
the battery via the radio's skinny little power lead . It's a huge
draw even in warm climes, during a cold winter start the starter might
attemp to draw upwards of 1000 amps through this "backup" of the
battery's negative lead.

I think you're wrong, Sarge. I urge every amateur to join the ARRL,
and to *vote*, and if necessary to run for office in the ARRL. You
won't change them by ignoring them. You've got to be inside to make
changes. Remember the ARRL is a non-profit membership organization
with an all volunteer Board of Directors. As long as the DXCC and
contest awards keep churning out, they'll have a core constituency
who won't back off, whether you buy a book or not. Making money isn't
their prime motivation. The only way to change the ARRL is to take
over the reins of the ARRL, and you can't do that from the outside.

I disagree. If the No-Coders don't join, ARRL will slowly whither and die
as its greying members slowly all go Silent Key, but it will never be turned
around by the purse strings. The ARRL is on record as saying they want to
attract "New Technicians" to the ARRL _and_ "service their core membership"
(read DXCC/HF/SS contesters). If we don't join, they'll continue to advise
the FCC as the authoratative voice for what ALL US AMATEURS want in the
aging voice of their core membership.

We MUST subvert from within if the FCC is ever to hear sensible advice from
the ARRL again.
Ooops, strike that last sentence, let's rephrase.

To get them to listen to us, we need to be paid up voting members.
If we join & tell 'em _in_their_forums_ what it'll take to keep us,
they'll listen. If we complain where they can't hear us, they'll ignore
us. Threats to cancel membership are less threatening to board members
than voting against them for some punk no-code candidate.

Personal:
I'm a No Code Tech & I just joined the ARRL last week along with an ARRL
affiliated local club (to whom the ARRL must kickback $5 since I wrote the
check to the club -- pick the local club that most needs the money, or that
most deserves it, and have them send it in: keep some of it local!).
QST is better than no magazine at all. I wish I could subscribe to the
1970's - 1980's 73, but hey. :-)

From the 1995 New York City Marathon Amateur Radio Operators Manual,
page 3:

"When initial logistical traffic lightens up the NCS will intiate
a roll call. From that point on, only use your location as an
identifier when you call into the net. i.e. "mile five to net"
or "net from mile 21"."

We recommend that you not call the FCC, as their number (800-322-1117) is
nearly always busy.

We (the ARRL/VEC) are happy to provide such information if you call us at
860-594-0300 weekdays, 8 am to 5 pm eastern time.

Note: The FCC was one of the non-essential Government agencies that were
on forlough last week. If your student tested about ten days ago, and
the test results reached the coordinated VEC by 11/09, the license may be
in place now. Else, I'd suggest you give us a call tomorrow. The VECs
should be sending all of last weeks data to the FCC today, and hopefully
tomorrow all those licenses will be in place.

Well, I was in the Army Security Agency (worked those "secret overseas listiening posts" Jack Andersen is always writing about).

We had a 10 week basic morse code school at Ft. Devens, MA, and had a particular code speed you had to make every week. If you missed your speed twice in a row, they called you out of Friday afternoon formation and sent you down the road to the infatry batallion. I had no problem cranking out 30 wpm, but I think the required was about 24 to graduate.

Didn't keep me out of Viet Nam, but it did keep me out of the bush.

I was a nuclear submariner from 1979-1983. The RMs onboard who'd been
to code school graduated at 5wpm which they promptly forgot.

The only people who could do code were myself and a QMCS - both of
us were hams. (We discovered this fact one day during drills when
I called CQ with the mic button on the sound-powered phones.)

Occasionally we'd get 'rider's who were intel specialists who listened
to the other sides' comms. They could do code too.

15 years later, I'll bet code school class sizes are pretty small.

Replace the twin-lead with 50 ohm coax and make up a cardboard scale for
whatever frequencies you want to use the unit on... Then set the length
and go... I've been using this setup on an indoor packet antenna for about
ten years... Works great for local contacts and you can move the antenna
around and get the best pattern for the station you want to work...

Marv... K4BVG...

Even when the experts all agree, they may well be mistaken.

The Commission's Rules for Amateur Radio (CFR 47 Part 97) do allow for the
addition of self-assigned indicators in addition to assigned call signs
and separated from the call sign by a slant mark or eqivalent, but I know
of nothing about "tactical callsigns" in the place of assigned call signs.

Army CW course, Fort Dix, circa 1968......part of what was called 05B course, radio operator. From nothing to 20 to 25 wpm in just over 3 weeks, if my memory serves me right. 6 to 7 hours a day, 5 days a week. The idea that if you weren't real motivated, you'd end up inthe Nam was a bit of a joke... if you were real motivated, did real good, you might go to Fort Gordon, GA for 05C school/radioteletype operator.

I was one of the real motivated ones, so I got to go to Fort Gordon, where before I even saw a rtty shack, I was copying more code on a 'mill'. After succeeding at that, and the rest of 05C school, what did I get?

A PRC25, and later a PRC77 radio on my back, an M14 rifle and a chance to talk long walks in the hot sun, accompanied by some of the finest men America was willing to sacrifice, in a place called the Iron Triangle.

Thanks (?) for the memories?

That seems to be in direct violation of 97.119. Not that the FCC cares or anything, but the principle is the thing, right? Or is there another paragraph which states that you must ID every ten minutes anyway?

Personally, I think a group of less than laudable people got together and
decided to have fun by posting a series of totally meaningless messages in
a set of totally inappropriate places. Theater of the absurd. Okay guys,
we've seen it; I give it a 3 on difficulty and a 4 on creativity. No
medal, not even honorable mention. So, wrap up the production, go away...
don't call us, we'll call you.

If I was smart, I'd have a clever .sig

I have a salvaged TV antenna, with VHF and UHF twin-lead lead wires. Each telescoping half extends 1 meter from the center of the antenna mount. I would like to rig this antenna for 2m work.

Any suggestions?

>to do much better with DX QSO than with any other transmission mode. Is
>this idea wrong?

Your latter idea is wrong. There are better methods than OOK Morse
to get through under harsh conditions, Clover for one, PACTOR II for
another. However, your former idea is correct, OOK Morse will generally
be better than SSB voice under extremely harsh conditions, though obviously
with much less throughput than SSB voice under somewhat better, and more
routinely experienced, conditions.

>I hope this mode doesn't die before I get to try it!

It won't. There's little danger of Morse *usage* disappearing on
HF any time soon. That's a separate issue from mandatory Morse
testing. The method can stand on its own merits without the
artificial support of mandatory government testing. Or if it
can't, then it really is obsolete and need concern us no further.

2432. !Premium Percale Sheets

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-20 00:00:00 UTC
From: taylorm@dcas.com
Message-ID: <48of7n$gmo@ns3.iamerica.net>
Source record: 235207

PREMIUM PERCALE SHEETS

We have located a small manufacturer of percale sheets in Alabama. He uses overruns from the large sheet manufacturers in the area. Overruns are not "second" material, but the amount left on a roll of fabric when a cutting table (50 - 75 yards long) cannot be covered completely. The result is that you get fabrics currently in production and not last year's styles or colors. About 80 % of his production is 180 threads per inch, with most of the rest 200 count and a few 220 count. The fabric is 80% cotton and 20% synthetic.

Each sheet set consists of a top sheet, a fitted bottom sheet and two pillow cases. The price of a KING set is $25.00, a QUEEN set is $22.50, a FULL set is $19.50 and a TWIN set is $17.50. All prices are US currency.

These are excellent sheets - I have used a set for the last 9 months. The fitted sheets will not come off the bed. He has a proprietary method of making a corner that WORKS - It stays tucked under the bed. Also, I have found them quite comfortable.

Sheets are ordered by specifying solids, or light floral or dark floral pattern with a dominant color. About 25% of his production is solid sheets in navy, burgundy, hunter green, slate and a few beige. Orders received by Monday are shipped Wednesday by UPS ground.

In a few weeks you will be able to see all patterns (about 45) which are available on our World Wide Web page and order by the pattern you want. However, in this case, delivery may sometimes take as long as three weeks due to fabric availability.

To order these sheets, please phone us at 318-741-3729 if you do not wish to give your credit card over the Internet. Be sure to specify the size, color, etc., your e-mail address, your mailing address and your phone number.

Shipping and handling is $3.00 US for 1 set and $1.50 US for each additional set within the US.

Please email if you want our WWW location.

I have an old Tektronix model 535 oscilloscope with about 20 plug in units I would like to GIVE AWAY FREE to anyone willing to come to my home in northeast New Jersey (Oradell, exit 165 of the Garden State Parkway) and pick it up. Worked last time I fired it up a few months ago. Approx 5 inch CRT, bandwidth around 10 to 20 MHz, comes with a scope cart, and a collection of various input signal plug-in units (2 channels, one with 4 inputs). Should be good for audio work, TV repair, some radio work.

I need the space this stuff is occupying, and would rather give it to someone who can use it than just throwing it out.

You gotta take all of it, too heavy to ship, so come and get it.
e-mail or call 201-261-4066

I picked up an old one also and took apart the center, removed
the twin lead, and soldered coax in its place. Shortened each
leg to about 19 inches, forming a half wave dipole. It tuned great,
gets great signal reports, folds up, and total cost about $3.
I have run up to 25 watts through it with no problem.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.misc

REVIEW: The Pocket Guide to Collins Amateur Radio Equipment 1946 t0 1980
by Jay Miller, KK5IM

Collecting Collins amateur radio equipment has now come of age, with the publication of Jay Miller's Pocket Guide to Collins Amateur Radio Equipment which covers radios and accessories produced from 1946 to 1980. This is an extremely interesting period in the development of the radio art and the beginning of the Single Sideband era, as seen by the many models developed and marketed by the Collins Radio Company of Cedar Rapids Iowa.

Jay dedicted the Collins Guide to Art Collins W0CXX (SK). He notes in the beginning that the Guide is not a history of Collins Radio nor is it a technical treatise on radio engineering as applied to their equipment. It is, he states, intended to provide the Collins user, collector and enthusiast with a complete pictorial guide to the amateur radio equipment produced from the end of the Second Warld War to 1980.

As a Collins owner/operator continuously since 1967, I have always enjoyed using my KWM-2A and keeping it maintained. This is about my level of technical competence. I also own a 75S-3C, 75A-4, 51S-1 and a military surplus KWM-2A that is awaiting my attention. When I heard about the Collins Guide I was most anxious to see it.

Jay and his associates, including Contributing Editor Butch Schartau K0BS did not disappoint me. The Guide is indeed pocket sized and is wire-bound which means that it will lay flat on a table. Both front and back covers are laminated for durability. Equipment is arranged pretty much in chronological order with professional-quality photographs and illustrations along with descriptions and information about the piece of equipment shown. There's a beautiful picture of the famous KW-1 transmitter on page 22.

The Collins Guide also includes some technical information, such as rear panel collections, crystal information, tube lists of A-line and S-line equipment and information on mechanical filters.

As mentioned earlier I was very pleased with the Guide. It is indeed a beautiful job! It is an important reference work as well as an easily read pictorial history of one of the major players in the development of ham radio communications technology and folklore. I consider the Collins Guide to be an essential information source for anyone wanting to know more about these wonderful radios!

Does anyone have any mods for the ICOM IC-736?
I'm looking for a way to turn the pre-amp back on below 1.6 Mhz.
Icom turns it off even though it the light says it's on.
I would like to listen for some lowfer stations 1750 meter band
(160-190 kc. 1 watt into a 50 ft antenna).

I'm also looking for a way to improve the recieve audio.
The recieve audio sounds flat and distant, lacking highs & lows.
With the notch filter ON the audio sounds a little better,
but it still could use some improvement.
They re-shape the audio through the notch filter,
and it actually has a nicer sound with the notch filter on
(Has more highs & lows).

I had a IC-737 that had the same problem with the audio,
just not sounding quite right.

I am also interested in any other mods for the Icom IC-736.

Please send any replies to yingst@knighted.com

Note: If you post a reply into this newsgroup I probaly wont get it,
my internet provider only holds news for 1 day.

Amateur Radio Station Equipment for sale:

Moving into development SALE......

1. Yaesu FT-767GX with 2m module, 6m module,
desk mike and backup battery mod $1300

2. Heathkit SB-2200 2KW Linear Amplifier(Covers 17m) $500
(Includes 2 3-500Z tubes)

3. Cushcraft A50-5S 6M 5 element beam antenna $100

4. Mosley 5-band HF 3-element beam TA-53-M(18Ft boom) $480

5. Telex HAM-IV rotor,controller and 150' (8448) control cable $350

6. Belden 8214 coax, 300' in 2-150' pieces $90

7. Rohn HDBX-40 40' 18 sq ft wind-load tower with tilt-over base,
15' aluminum mast, rotor plate and thrust bearing. $550
All hardware included.

Note: All equipment excellent to new condition and working.
All antennas working and dissembled for shipment.
Delivery of large items to local area included in price.
Prices and delivery are negotiable.
Inquire for price on complete package and local area info.

Would like to sell everything at once as complete package.

My location: south central Pennsylvania. Delivery approx 125 mi radius from my location

For inquiries Email: Jim, WB3J at 102753.105@compuserve.com

2454. Help with Tube Amplifier Troubleshooting

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-20 00:00:00 UTC
From: harris.pander01@ic1d.harris.com
Message-ID: <harris.pander01.49.30B07AFC@ic1d.harris.com>
Source record: 235229

I'm afraid I came along in the solid-state generation, so I don't have experience with tubes. But I have a "learning opportunity" now!

I'm repairing an HF amp -- a Yaesu FL-2100B -- which uses two 572Bs. I'm told that this is the same design as the Heathkit SB-200. It has been shelved for many years; the tubes have a 1977 date code. I have taken care of the obvious mechanical problems: corrosion, fan lubrication, etc. No internal components appear to be bad (for what that's worth).

Problem: the amp does not accept power from a 50 ohm exciter -- very high SWR at the input. I notice "a little" ionization in the tubes with high-voltage applied. The blue-ness is in a very small zone where the plate lead passes into an insulator.

Questions: Is "a little" ionization too much to have in a transmitting tube? Will this condition cause high SWR on the amplifier's input? Will a new pair of tubes take care of things?

Advice please!

Another one for you. At the end of each TV episode of 'Inspector Morse' (usually on PBS), the theme song cleverly weaves in the word 'Morse' via a series of monotone beats.

Hi. A newbie here, studying for my novice license, but FWIW, CW is about all that interests me. The reason for the interest is that a novice can use it on the 40 and 80 meter bands, and it is my observation that CW cuts through the QRM much better than voice communications. I would expect to do much better with DX QSO than with any other transmission mode. Is this idea wrong?

I hope this mode doesn't die before I get to try it!

It's not too unusual for tubes to have a *little* bit of blue glow
around the plate cap area. A lot would indicate a gassy tube. Now
a gassy tube would affect input VSWR, but I doubt that's your problem.
If this amp is like the SB-200, then it's a grounded grid design with
a fixed tuned input. These amps didn't approximate a 50 ohm load very
closely, so I'm not surprised your exciter isn't too happy. Just how
much VSWR do you mean by "very high"? If it's in the neighborhood of
2:1, that's pretty much to be expected. If it uses an untuned input
with little swamping, you might see an even higher VSWR, especially
if it's lightly loaded.

If it does use a tuned input, its possible you've got a problem with
the bandswitch, and you may not be making good contact with the proper
fixed tuned network. Do you experience the problem on all bands, or
on just one or two?

>Please post replys here.

Yep. sure have. They're made and sold here in Taiwan. ADI is just an OEM name for the little 2 meter and 70cm handhelds and mobiles. Several companies (including ADI) are putting their own name on the labels. Designs are from Standard Radio, Japan as far as I can tell, but manufacturing is in mainland China and imported for final assy in Taiwan. This year at the Taipei electronics show, several companies were showing their latest VHF/UHF equipment. Items included the normal 2 meter and 70 cm HT's, Mobiles, several COMET styled HT and Mobile antennas, and a dualbander coming in the first part of '96. A

Prices are very competitive, but wonder about getting a defective unit serviced. Quality is improving, and probably now on par with any of the Japanese HT's. But the earlier ADI units had problems. If you compare the features and layout of the earlier ADI rigs, you will see that they are identical in appearance to the STANDARD brand. For the money, it's probably worth giving it a shot. If you buy in the USA, any reputable dealer should warantee the unit for 30 days or so...enough time to detect any unit failure.

I have lotsa literature from the show, if you have a specific Q, email me at JOENTAM@TRANSEND.COM.TW. EMAIL to my work address will go unanswered, sorry. I think I have the spec sheets on the units too.

: um, what's a sound-powered phone?

It's the headset and chest microphone you see in so many of the films
from WWII when they show the Navy at work repelling kamikaze attacks.

The system is basically passive and extremely reliable for internal ship comms.
(which is why it is still in use today)

Basically I was using background noise as the carrier which I modulated
with my mic button.

>or synthesized voice.

It doesn't matter. Each transmitter still has to identify individually every 10 minutes during the activity and again at the termination of activity. Tactical calls can be used in between. That remains true even if all the stations are operating under a common club call sign. Each RF carrier must still be identified. The FCC allows tactical calls specifically so you won't run afoul of the prohibition against transmitting false or deceptive identification, but that doesn't waive the 10 minute rule for a regular legal ID.

We face a similar situation in Broadcast. We can use jingles or slogans as "tactical" IDs, but we still have to give a full legal ID at least once an hour, at the first natural break nearest the top of the hour. Amateurs have to ID more often, but the principle is the same. The purpose of IDing is to determine who's responsible for that particular RF carrier in case it may be causing some problem to others.

From FCC Rules, Part 97.119(a):
"Each amateur station, except a space station or telecommand station, must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every 10 minutes during a communicartion, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions. No station may transmit unidentified communications or signals, or transmit as the station call sign any call sign not authorized to the station."

I don't think that the old hack "When in Rome, do as the Romans do" will hold water against an FCC citation. On the other hand, when was the last time that FCC Field Enforcement Office even wrote a citation?? Food for thought.....

Gary,
I agree with you.
People keep slaming thE ARRL. I truly believe that without the
ARRL to represent us, there would be little or no Amateur radio
as we know it.
I don't always agree with everything they do, but we do need them
very much to represent our interests.

It's unfortunate that this tirade must continue. Even more unfortunate
that our younger readers must be exposed to this behavior by, I assume,
adults. I do not know Mr. Fisher, and even if I did, I would not comment
about him on the net. Making personal attacks on people in public is
just plain tacky. Do I sound like your mother? Well, yes. There is an
absolute right and wrong. You are wrong. God gave us free will, though,
but some still dont know what to do with it. I'll pray for you.--

>
>Gary
>--
snip

agreed. i was trying to stimulate the conversation for a more complete
answer.
the above answer is why on all my vehicles i ground the main negative
battery lead to either 1. the engine block or 2. the mounting bracket that
holds the alternator to the engine block (not the alternator frame!). i
perfer method #2, this ensures that i will not have voltage sensing problems
between the alternator and the battery. it always seems that the engine
block method always has dirt,grease,paint etc between the negative lead and
the block, same thing applies for body or frame attchments.

any comments?
jim

>CX. (30 khz).
>Thanks 73 from
>CX9BBL
>
To the best of my knowledge 800 MHz capable radios are no longer available in
the
US. In Canada, however, it's a different story. I'm not familiar with the
732, but
if it's a base, consider buying a Radio Shack Pro-2006 if you can find one.

--
Best regards,

Bill Fischer @ Electronic Countermeasures Inc.
==========

Bill's knowledge is close, but not exactly correct. Scanners that recieve or
are very simply modified to recieve cellular frequencies cannot be sold in the
U.S. (but possession is not restricted). Some makers took the route to block
all 800 recieve on their recievers, but they were not required to block the
whole 800 band, just the cellular range. Guess that was easier for them.(?)

Canada does not forbid the cellular recieve, so try them or Javation in
England, who sells Yupi & other wideband scanners with no blocks.

73,
Yuri.

SpaceNews
=========

MONDAY NOVEMBER 20, 1995

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is
published every week and is made available for unlimited free distribution.

* MIR QSL NEWS *
================
Dave Larsen, N6JLH, is now the new QSL manager for the USA for all Mir QSL
cards for the callsign R0MIR and R0MIR-1. All older callsigns have to go
to Russia.

Dave has been granted the privilege of acting as QSL manager from Sergji,
RV3DR. QSLs must include date, time, and mode of contact. Cards for SWL
reports will not be handled by Dave. If a contact is made with the Mir
packet radio personal message system, then the message number issued by
the PMS should be included on the QSL card.

QSLs must be sent along with a business-sized self-addressed stamped
envelope (the card will not fit in a regular-sized envelope). A "green
stamp" to cover postage would also be appreciated.

QSLs should be sent to:

N6JLH
P.O.B. 1501
Pine Grove, California 95665
U.S.A.

[Info via G. Miles Mann, WF1F]

* STS-74/SAREX NEWS *
=====================

The SAREX Astronauts were very active on STS-74, making numerous voice contacts with groundstations on 2-meter FM. It should be noted that Canadian Astronaut Chris Hadfield, KC5RNJ, received his Canadian Amateur License last week. His Canadian callsign is VA3OOG. He used this callsign on several passes other North America, particularly when the Shuttle traversed over Canada.

Last week, the Atlantis astronauts completed 5 scheduled ham radio contacts with US students as part of the Shuttle Amateur Radio EXperiment or SAREX. These groups included students from Franklin Junior High School in Pocatello, Idaho, Norwalk County schools in Connecticut, Lake Street Elementary School in Crown Point, Indiana, Round Lake-area schools in Illinois, and Quimby Oak Junior High School in San Jose, California. The students were assisted by their local Amateur Radio clubs and many AMSAT SAREX volunteers.

QSL cards and reports may be sent to ARRL EAD, STS-74 QSL, 225 Main Street, Newington, CT 06111-1494, USA. Include the following information in your QSL or report: STS-74, date, time in UTC, frequency and mode (FM voice). In addition, you must also include a SASE using a large, business-sized envelope (#10) if you wish to receive a card. The Greater Norwalk Amateur Radio Club in Norwalk, CT has generously volunteered to manage the cards for this mission.

[Info via Frank H. Bauer, KA3HDO, of the SAREX Working Group]

* INFRARED SPACE OBSERVATORY (ISO) IN ORBIT *
==========
The 80th launch of a European Ariane booster was successful on the night of November 16, 1995. The Ariane 44P rocket liftoff was performed from the Guiana Space Center in Kourou, French Guiana, South America.

Built by Aerospatiale for the European Space Agency (ESA), the spacecraft will have a major impact on every field of astronomy, spanning from solar systems, the birth and death of stars, and the most extragalactic sources.

The Infrared Space Observatory (ISO) was placed in highly elliptical orbit of 570 km by 71,499 km, inclined 5.2 degrees, with a period of 24 hours. The primary objective of the mission is to provide spectroscopic, photometric, imaging, and polarimetric observations of selected celestial sources.

NASA's Deep Space Network (DSN) will support the mission after the launch and early orbit phase (LEOP) is complete. The Goldstone, California 26 meter and 34 meter antennas will provide support for real-time telemetry and commanding. The ISO Control Center is located in Villafranca, Spain. Tracking support from Goldstone will be provided during a 8 to 10 hour period per day. Telemetry and tracking data will be downlinked from the spacecraft at 2266.5 MHz with a real-time data rate ranging between 4,096 - 32,768 bits per second.

[Info via Keith Stein]

* SORRY! *
==========
Sorry, but due to a very busy schedule and a minor health problem, there
was no SpaceNews issued last week (13-Nov-95). Thanks to all who sent

maybe someone can get burt's principal on the line in amateur radio and have
him start reading the news...maybe it might make for some interesting discussion
at review time...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z NOVEMBER 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 NOVEMBER AND FORECAST FOR 22 NOVEMBER - 24 NOVEMBER

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 20 Nov
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Nov 23 Nov 24 Nov
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Nov: 73/9

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 20 Nov
Learmonth 4 2121 1211
Fredericksburg 5 6
Planetary 8 4

Observed Kp for 20 Nov: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Nov 4 quiet
23 Nov 4 quiet
24 Nov 4 quiet

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

21 Nov Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Nov Normal Normal Normal
23 Nov Normal Normal Normal
24 Nov Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
DATE T index
21 Nov 10

Observed Australian Regional MUFs:
Townsvile: near predicted monthly values with spread F 13-18UT.
Sydney: 10% enhanced until 9UT then near predicted monthly values.
Hobart: near predicted monthly values.

Predicted Monthly T index for November: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Nov 10 near predicted monthly values
23 Nov 10 near predicted monthly values
24 Nov 10 near predicted monthly values

I started as no-code Tech. Great starting spot but I really wanted to get into
HF, DX, paper chaser stuff. I liked exchanging QSL cards with packet contacts.
But just lacked that something....it has been CW! I thought I'd have no use
for CW at all. But was I wrong. Had I the chance to do it over OR some
sage (?) wisdom for a newcomer; go thru the Novice area, get the CW down and
you can do the Tech part on your own (or with help from a friendly elmer).
I'm not very technically oriented, but have been learning bit by bit (no pun
intended for the packet folks).
> 1) What would be a good "starter rig" for CW? I'm fairly confused by all
> the options out there. While not made of money, I can save up for and
> purchase a receiver costing > $1,000 if necessary. I expect to stay
> in this hobby for a long time.
I started on a loaner, HW-9 on a long wire antenna. I built the long wire and
it works pretty well. A friend said, a Kenwood 520S is a good older rig, or
```

Kenwood TS 140. But the $$ will start to eat you up. Then what kind of an
antenna? I built a G5RV from plans out of an antenna book. Cost, $25, after
I got it up.
>
> 2) The ARRL publication strongly suggests finding other hams in your area
> to benefit from the collective wisdom. Does anyone know how to contact

Sorry, I'm in Iowa, but very good advise on contact hams.

> 3) Do most people around the world transmit CW in English? If not, does
> an alphabet exist for other languages such as Arabic or Russian?
CW is CW, English, Russian, German etc.

> 4) Can CW be legally transmitted by computer? i.e, you know CW, and
> are licensed to transmit this mode, but
> you prefer to have the software send the information. What about all
> the nasty hum generated by the computer? Is that frowned upon?
There are some interface (radio & computer & software) I've heard about that
will allow CW by keyboard. Not familiar with it though.

No prob Robert, I was lucky enough to run into a really, good bunch of elmers,
(what is a group of elmers called, gaggle, pod, group, flock?????) I've gotten
TONS of great advice, assistance and some leftover equipment. Dust collectors
and boatanchors to them but pure gold to me.
Great sig, but let me modify it slightly.

Scott Love me, love my pug; chased 1 too many parked cars.

2505. Tek 604 CRT Display Diagram?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-21 00:00:00 UTC
From: galen@lamar.ColoState.EDU
Message-ID: <48t6o0$2mhu@lamar.ColoState.EDU>
Source record: 235178

I have a Tektronics model 603 CRT display unit. It has a little problem with with it's -30 volt supply (it's only -25.6 volts, manual sez -30 exactly) and the manual I have is a poor photocopy, missing some horizontal lines, etc.

Does anyone know where to get a better copy or even a real manual? I only need the diagram marked 'Low Voltage Power Supply/Regulators' and is a schematic of same. The bottom says (I think): "603/604 Rev H June 1976'.

havin' fun,
galen, KF0YJ

Well, look at it this way, Bob, at least they let you carry a real
rifle instead of the Mattel toy. So maybe radio school was worth
something after all. Or maybe they figured that if you were dumb
enough to carry that heavy pig of a radio they could saddle you with
a heavy rifle too. Take your pick.

Q5 is the top rated signal readability response for phone operation.
Essentially you are saying armchair copy. ie no need to put in filtering
or messing around with the receiver to clarify signal. In other words your
arms and hands stay on the chair arms and not on the radio. Q5 is a hold
over from the old AM days when hetrodynes were a real pain in the butt.
Q5 signal basically blew the hetrodyne far into the background.

The current timimg with electronic filing is 7 to 10 days. If you took the exam thru W4YI VEC or an ARRL VEC they use electronic filing with the FCC.

Tower conundrum--

Unfortunately, I built a house in a deed restricted community just before I got back into ham radio. Despite that, I put up various wires and a short tower, ending up with a 40' crankup with a TA-33 and 40m element which stayed up a year or so, miraculously. The tower was storm damaged and came down this summer.
Now is time to scheme up a replacement. The most I could imagine getting away with would be a decent tribander and 2el on 40. I don't chase DX, I guest op for the biggies, and just want to go on the smaller domestic contests from home.
My location is also not so hot, down a hill which slopes to the west. It doesn't make a lot of sense to invest much, seeing as the best I expect to do would be mediocre, and I generally operate so rarely.
The question is, given this scenario, what makes sense. I could put up 40 to 60' of 25G, guy it, and the same antenna, and perhaps upgrade the antennas. Or, it could be a crankup that would nest at 20' or so, which, sitting behind the house, would be great, and go up on occasion to 50-70'. However, this is a much more expensive installation which will infuriate my wife as well as the neighbors. Not to mention that crankups scare me in general and we are lucky that the last one, whose cables snapped a couple of times, etc., did not hurt anyone.
What difference could antenna height between 40, 50, and 60' mean for primarily domestic work and an occasional world-wide contest?
What would be the optimum antennas? Force 12? 40-2CD?
Thanks for all your help, and have a great Thanksgiving! Bob

Burt Fisher <k1oik@ccsnet.com> writes:
> Frequently I hear hams say, THE name HERE is_____.
>How often do you say when you meet someone (assuming your name
>is Charlie), THE name HERE is Charlie? You never do that right?

It's a different culture, Burt, and you're experiencing culture shock. Amateur Radio has been around a lot longer than you have, and it has developed its own "code of conduct" and a particular way of speaking. In Mexico, one does not say "My name is ____" -- to do so would be considered an EXTREMELY impersonal statement! One says instead "I am called ____" -- and that's just the way it is.

You seem to be ridiculing a common practice merely because it sounds impersonal to you. From the other point of view, you are attempting to use face-to-face speaking conventions when you are communicating with voice only, and that sounds just as strange to many "oldtimers" as the way it's done now sounds to you.

Remember that for the most part, radio communication is just barely interactive; while you are talking, there is no feedback from your listener(s). Don't expect to be able to use the same conversational style in all situations. For instance, how often do you begin a short monologue with the phrase "Three minutes ago, so-and-so said:" and a direct quotation? How often do you punctuate your sentences with "emotion" indicators? Be flexible. When in Rome, do as the Romans do. Don't flame them lest you be burned yourself. (Oh, sorry. Too late.)

First learned code when I was about 10 years old, so naturally was selected for radio training when I enlisted in 1960. Attended 051 (later changed to 05B) tng at Ft. Jackson, SC in 1961. Seems like requirement was to pass 15 WPM to graduate. I managed 20wpm in time alloted for cw tng. I was assigned to Korea near the DMZ and immediately given an AN/PRC-25, a rifle, and followed a Major around the Korean country side for two weeks. I was in the Army 20+ years as a radio operator and later a Comm Chief. When I retired here at Ft. Gordon I got a job as an instructor at the Sig School. It was a sad day when we finally phased out cw training a few years ago. The MOS is still around as 31C Radio Operator/Maintainer, but no code and no RadioTeletype.

The Q signals are a function of S/N. I forget exactly how it goes but it's something like this

Q1 - all noise , no copy
Q2 - mostly noise, little copy
Q3 - copy with difficulty
Q4 - some noise, copy OK
Q5 - no noise, copy perfect

I like them a lot better than RST.

You make a good intelligent argument against my position.
I am afraid the ham code of conduct has evolved from the "man hiding
behind the mike "phenomina. Hams plainly want to avoid being deeper than a
shallow puddle. An oxymoron would be a ham at a nude beach.

2537. CW Military Training

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-22 00:00:00 UTC
From: Stephen.Baker@ummed.EDU
Message-ID: <199511220354.WAA06931@ummed.edu>
Source record: 235060

Me too! 05Bravo training in Ft. Dix, because I'd had a ham license in the 1950's (WN1BOT). It took me forever to get to copy 5wpm for that novice ticket, when I got to 05bravo training I hadn't copied cw in 10 years and in 2 weeks of 5 character random code groups for 6 hours a day, 5 days a week I was copying 25+ wpm. I NEVER got the Sky King award (for saying "over" and "out" together), all that authentication training and those military HF rigs ! I'd LOVE to do that again (except for those jerks yelling in your face). I too got sent to Ft. Gordon GA for 05Charlie training (RTTY and crypto) but ended up doing 31Mike, multiplexed UHF radio relay and carrier in Ft. Hood. I wish I could getmy hands on one of those portable towers, a generator trailer and a mobile shack on the back of a deuce-and-a-half for Field Day. I also wouldn't mind having hot meals choppered in on a huey like back then, though we used to prefer C ration "s'mores" melted on the generator exhaust manifolds to the mess hall desserts.

Good memories.

For 99% of folks, *receiving* code is the trick. Most people can send as fast or faster than they receive with just a little practice sending. Be sure to learn the letters as "rhythms", not as dots and dashes. This is why most code tapes and computer code programs send individual characters at around 18 WPM, with long pauses between characters to get the overall speed down to 5 WPM (or whatever). this is know as the Farnsworth method.

> I have a few questions which perhaps one of you can answer:
>
> 1) What would be a good "starter rig" for CW? I'm fairly confused by all
> the options out there. While not made of money, I can save up for and
> purchase a receiver costing > $1,000 if necessary. I expect to stay
> in this hobby for a long time.

For a little over $1000 you can buy a *new* transceiver, I believe. To me, choosing between Kenwood, Icom, and Yaesu (and anybody I'm leaving out) is a bit like choosing between Ford and Chevy. Find the features you want at the price you can afford. BTW, you want a transceiver, not a receiver. Used to be you could by RX and TX separately, but not any more (more or less). Now, others might be able to make a case that certain rigs are better for CW, but they all are designed for both CW and SSB (and usually AM, FM, some kind of digital mode (FSK), etc.)

> 2) The ARRL publication strongly suggests finding other hams in your area
> to benefit from the collective wisdom. Does anyone know how to contact
> hams in Denver? If not, I will write to ARRL.

There used to be an Elmer's list (an Elmer is a mentor, as you describe here) posted here periodically. I haven't been here in a while, so I don't know if it still is. If not, perhaps someone could send you the most recent one.

> 3) Do most people around the world transmit CW in English? If not, does
> an alphabet exist for other languages such as Arabic or Russian?

In a sense, most use English, but with many standard abbreviations (like TX, RX, CW, es (and), ur (your), etc.) and, of course Q-signals. I think there is a section in the ARRL book about that. I'm not a CW guy, so others could give you better info here.

> 4) Can CW be legally transmitted by computer? i.e, you know CW, and
> are licensed to transmit this mode, but

> you prefer to have the software send the information. What about all
> the nasty hum generated by the computer? Is that frowned upon?

Bill Newkirk addressed this. I have used my computer for CW (OK, I've done a little CW, but don't tell anybody). My fist gets cramps trying to send at 15 to 20 WPM (my brain gets cramps trying to receive at those speeds but that's another story). Hum *might* get into your transmitted signal and that is certainly something you'd need to check out, but you are more likely to have problems with computer noise in your receiver. Because I'm always diddling with my computer, I usually just have one screw holding the case on. When its being used with the radio, I find out why they use about 12 of those buggers normally!

> Thanks in advance, and please be gentle with me -- I have been studying for
> only a few weeks and may have made a total fool out of myself asking a question
> above.

Nothing foolish about your questions at all - they're well-posed. My answers may be another matter!

73,

Jud

2541. GRID SQUARE HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-22 00:00:00 UTC
From: QXBJ74A@prodigy.com
Message-ID: <48vtpp$1ceq@usenetp1.news.prodigy.com>
Source record: 235064

Is anyone aware of a site that you can either telnet to or access via the WWW to obtain your grid square? I know that at one time, a few years ago, there was a telnet site that would give rather close longitude/lattitude readings by entering your zip-code.

Thanks

Marc Taylor

Me too! Me too! The next CUARC session will be Monday December 18th
at 6:30 pm at Columbia University, 116th Street and Broadway
(approximately; call for specific campus building and room number).
So, if you blow it at BEARS, you can try again in a week and still
have your ticket in time to ask Santa for that new toy:-)

There's also a W5YI/VEC group, Metroplex, that gives exams on Fridays.
For more complete info, see:

Source record: 235067

Hello all.

Does anyone out there have any experience with designing a circuit for 440 MHz receive using the Motorola MC3362/3 FM receiver chips? These are good to 200 MHz using the internal LO, and to 450 MHz with an external LO. I am looking for an external LO circuit for this application. I want to build a low cost receiver for a local 440 repeater that broadcasts seismograph telemetry. I can then free up my $450 HT for other frequencies. :-)

Happy Thanksgiving to all, and thanks for the assist.

SB DX ARL ARLD059
ARLD059 DX news

This week's bulletin was made possible with info provided by John, K1VWL, Jean Michel, F6AJA, Art, NN7A/V31JZ, Leo, K8PYD, Alex, LU5UL, Tom, K8LA, Tedd, KB8NW, the OPDX Bulletin and Contest Corral from QST. Thanks to all.

MYANMAR, XZ. JA6LDD, JH1KRC and JA1BK are active as XZ1A through November 27 on 160 through 10 meters with 3 stations active at the same time. Check 3795 kHz from 1300 to 1400Z and 7002 kHz at 1130Z. QSL via JA1BK. Do not use registered mail or special delivery.

HEARD ISLAND DXPEDITION A NO GO FOR JANUARY 1996. Due to transportation problems, the Heard Island team has decided to delay the DXpedition for one year.

CHATHAM ISLANDS, ZL7. Jon, WB8YJF, and Leo, K8PYD, will sign ZL7CW and ZL7PYD, respectively, in the CQ WW CW Contest. They were scheduled to start operations about November 21. Look for them on CW, RTTY and SSB on all bands 160 through 10 meters, including the WARC bands. QSL via their home calls.

KERGUELEN, FT5. FT5XK has been working Europeans on 14136 kHz around 1600z. QSL via F6KQD. FB1LYF will stay on Kerguelen for a year and use the call FT5XL. He operates CW, SSB and RTTY.

SIERRA LEONE, 9L. Paul, 9L1PG, is vacationing stateside until around mid December. He will be bring a new rig and amp back to Freetown on his return trip. Cecil, NW8F, has shipped antennas for 80, 40 and 12 meters, so 9L1PG should start showing up on the low bands in December.

TAJIKISTAN, EY. EY2Q will be in the CQ WW CW DX contest as a Multi/Single entry. QSL via EY8CQ direct or the TARL QSL bureau. Nodir, EY8MM, will be actively looking to work North American

stations this Winter on 160, 80 and 40 meters.

IVORY COAST, TU. Peter, ON6TT, is in TU land for a four week Red Cross mission. It is not certain whether he will be doing any amateur radio operating.

MACQUARIE ISLAND, VH0. Warren, VH0WH, will be arriving on Macquarie around the end of November and will be there for the full year.

SAIPAN, AH0. JA6VZB, JR7OMD and JI3ERV be a multi-op, single transmitter entry in the CQ WW CW DX contest as AH0T. Only QSL via JA6VZB, and by the bureau.

MONACO, 3A. John, K1VWL, will be active November 22 through 28. Look for him on 1824/1828, 3523, 7023, 10105, 14005 and 18070 kHz. He will be active in the CQ WW CW Contest. John notes that QSLs for his BV/K1VWL and FO0TJ operations are still available from him for an SASE.

SEYCHELLES, S79. Gerard, F2JD, has obtained his license for S79JD operation and will be active until the end of November. QSL via F6AJA.

GALAPAGOS ISLANDS, HC8. Operators WN4KKN, WX3N and AG9A will do a multi-single effort in CQ WW CW DX contest signing HC8N. QSL HC8N and WN4KKN/HC8 via AA5BT, others via home calls.

ITU HQ GENEVA, 4U1. A group of German radio amateurs will be active from 4U1ITU during the CQWW CW DX contest. QSL via DL3DXX, direct or bureau.

TURKS AND CAICOS ISLANDS, VP5. KW8N, N9DX, W0CG, WD8AUB and W9VNE will be active as VP5FOC in the CQ WW CW DX contest as a multi/multi entry. QSL via W9VNE, PO Box 54482, Cincinnati, OH 45254-0482.

BELIZE, V31. Tom, KT6V, will sign V31UA and enter single op/all band in the CQ WW CW DX contest. There will be activity before and after the contest on the WARC bands. QSL via KT6V.

U.S. VIRGIN ISLANDS, WP2. Dave, WD5N, will operate as WP2AHW on all bands from Saint Croix November 21 to 28. QSL via WD5N.

PANAMA, HP. Ellis, AA4LI, will sign AA4LI/HP1 the first two weeks of December, concentrating on CW. Activity will be limited to evening hours, probably 0200 to 05000z, due to his work schedule.

EL SALVADOR, YS. Tom, K8LA, will do a low key operation in the CQ WW CW DX contest as YS1ZTM.

ARGENTINA, LU. Alejandro, LU5UL, will sign AZ9W in the CQ WW CW Contest and the ARRL 10 Meter Contest. QSL to his 1995 CBA only.

QSL NOTE. Art, NN7A reports that a delay at the W7 QSL bureau has been resolved and all bureau cards he has received have been answered as of September 30 for his V31JZ, VK3FBM and UA9F/NN7A

operations.

THIS WEEKEND ON THE RADIO. For those able to recover from Thanksgiving Day feasts, the CQ World Wide CW DX Contest is this weekend. See page 127 in October QST for more information.

Yes, I regret to say that we fell behind schedule. However, we are catching up. You should have received your September issue by now, or within the next few days at the latest (in North America, anyway). The October issue preview copies have come back to HQ from the printer, so those should be arriving in your mailboxes over the next couple of weeks. The November issue is at the printer and should be hitting mailboxes shortly after the October issue, and the December issue will go to the printer in early December for late December/early January delivery. Following issues will continue to creep back toward the normal schedule until things are back in order.

I apologize for the inconvenience and the delays. We'll get it fixed.

2552. Looking for QPSK demodulators !

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-22 00:00:00 UTC
From: jekucfjc@w254zrz.zrz.TU-Berlin.DE
Message-ID: <48uqto$7c0@brachio.zrz.TU-Berlin.DE>
Source record: 235075

Does anybody know which company makes QPSK demodulators.
They should derive their clock from the baseband signal.
The data rate will be 1 Megasymbols per second.

THANKS

Jens

2553. Who makes VCOs/PLLs for 430 MHz?

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-22 00:00:00 UTC
From: jekucfjc@w254zrz.zrz.TU-Berlin.DE
Message-ID: <48uqur$7c0@brachio.zrz.TU-Berlin.DE>
Source record: 235076

Does anybody know which company makes VCOs/PLLs that can
operate at the 70cm band (430 MHz).
I need to build a receiver that mixes the received RF down
to the baseband signal. I don't want to use Mini Circuits'
VCOs which draw too much current and require 12V VB.

THANKS,

Jens

Yes, and again, I haven't looked at current rules, the old rules said they
could be used in place of callsigns, as designated by net control. However,
I'm sure that once the net situation is over, all should ID with normal calls.

Divisional news

Divisional news

The last examinations for 1995 will be held at Amateur Radio House, Parramatta, on Sunday 10 December. Applications will close on Thursday 30 November. Candidates should report at 12 noon on the day of the exam.

The Examinations Service thanks the Australian Amateur Television Club for kindly rearranging their club meeting to allow the examinations to be held early enough for results to be (hopefully) available before Christmas.

...speaking of which, a reminder that it's only 5 weeks to Christmas. The Parramatta office library and bookshop are now open on Saturdays from 10am to 1pm, with lots of ideas for Christmas presents. How about letting the XYL purchase that book you've always wanted!

Next Sunday's Trash and Treasure Sale will NOT BE HELD AT PARRAMATTA. Instead, it will be held at Box Avenue, Wilberforce, starting at 11am. To get there, take the Wilberforce Road from Windsor to Wilberforce; when you get there, turn right into King Road, which becomes Sackville Road; turn left at Ironbark Drive, and finally right into Box Avenue. The sale will take place behind the glass factory in Box Avenue.

(Everything must go, so please get in early and clear the place out :-)

--- Eric Fossy VK2EFY, Divisional Secretary

VK2 on WWW: update

VK2WI Web Page Update

A further update on the NSW Division's World Wide Web page... the "front page" has been installed at its new address, and is ready for use. The "URL" is:

http://sydney.dialix.oz.au/~wiansw/

This front page has "hot links" to the other NSW Divisional Web pages, which are still under development at another site; these extra pages will be migrated to Dialix in the near future.

--Richard VK2SKY, Honorary Divisional Webmaster :-)

News briefs

NEWS BRIEFS

The United States Air Force has developed a short-range communications system which it says is immune from electronic eavesdropping. The system is usable over a range of up to one mile, and uses infra-red laser diodes to relay the signal.

Surgeons in Melbourne have performed the first bionic ear implant that bypasses the body's inner ear and goes straight to the brain. The patient, who lost her hearing ten years ago, had the bionic ear fitted in and eleven hour long operation about six weeks ago. The device was finally switched on during the week.

Medical experts are hopeful that the technique can be used to treat blindness and even paralysis in the future.

This item might be of interest to those who would like to try video conferencing, but who don't have access to such niceties as a video camera. Brisbane software company HiJiNX, has developed an Internet video conferencing simulator, which replaces video camera images with computer generated animations. Each participant in the conference can select a different "cartoon character", which is transmitted to all the other participants. During the actual conference, the "animation engines" on each computer exchange coded information about which view of the cartoon character to display; this requires much less bandwidth than transmitting full real-time video. Perhaps the technique could be applied to Amateur Radio in the future.

In addition the software features a "text-to-speech engine" which provides the audio part of the link.

Users can select from a number of ready made "identities", or can create new ones using an in-built "ID kit", or even provide digitised photographs of themselves.

The software is due for commercial release on 1st December, but a free demonstration version is available on the World Wide Web at:

http://www.hijinx.com.au

VK2 WICEN news

WICEN NEWS

Thanks to Andy VK2XRX, we have some fresh news for the WICEN segment. It appears that many events are not being notified, because no further personnel are required, or for parochial reasons. The "PR" value of these broadcasts should not be underestimated, especially when the Amateur Radio Service is

coming under increasing pressure to justify its millions of dollars worth of radio spectrum; what are YOU doing to help?

A new event this month is an "Introduction to Emergency Management" course at Gosford, on Thursday and Friday the 23rd-24th November. This course is recommended for all WICEN personnel, and further details can be obtained from Andy VK2XRX.

Other events this month are the Hawkesbury Classic Paddle dinner on Saturday, the Latrobe Emergency Services seminar next weekend, and the closing date for the WICEN newsletter on Thursday 30th November.

New events next month are the Lion Island Ski Race and the Gosford Railway Bridge opening; both events are on Sunday 10th December, and Andy VK2XRX can be contacted for further information.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest. Packet radio is the preferred medium, to the VK2KFU system itself (AX.25 or TCP/IP), or failing that, to VK2DAA, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets:

- Blue Mountains each Monday at 8.30pm on 7175 simplex

- Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays

- Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900

- the State-wide HF net each Wednesday at 8.30pm around 3610 kHz

- Central Coast each Thursday at 8.30pm on the Wyong repeater 7125

- Sydney each Thursday at 9.30pm on the Chatswood repeater 7150/8275.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

IPS report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(10 NOVEMBER - 16 NOVEMBER)

ISSUED 17 NPVEMBER

SUMMARY
DATE 10 11 12 13 14 15 16
10CM 78 77 76 73 75 77 76
A 6 5 12 6 5 3 (3 estimated)
T -1 5 9 8 6 9 16

SOLAR ACTIVITY WAS LOW ON 10TH AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 10TH TO 11TH, AND 14TH TO 16TH NOVEMBER; QUIET TO UNSETTLED WITH BRIEF ACTIVE PERIODS ON 12TH, AND QUIET TO UNSETTLED ON 13TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES, WITH A BRIEF ENHANCEMENT TO 30 PER CENT ON 13TH. SPREAD F WAS REPORTED DURING LOCAL NIGHT ON 13TH TO 16TH, WITH SPORADIC E PRESENT AT TIMES ON 12TH TO 14TH NOVEMBER.

FORECAST (17 NOVEMBER - 23 NOVEMBER)

SOLAR: VERY LOW TO LOW

GEOMAGNETIC: MAINLY QUIET WITH UNSETTLED PERIODS

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES

COURTESY OF IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Manly-Warringah

Members of the MANLY-WARRINGAH RADIO SOCIETY are reminded that the club's
annual Christmas dinner will take place this Friday evening, 24th November
at the Collaroy Services Club.

Anyone interested in attending should contact Sean Gannon VK2THT, if he doesn't contact you first. Sean's number during business hours is 9979-6979, or after hours you can call him on 450-1370.

The Manly-Warringah Radio Society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road, Terrey Hills, and doors open at 7:30pm. Visitors are always welcome. If you need directions, just call in on the club's 2m repeater on 146.875 MHz.

--Richard VK2SKY, Publicity Officer

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 885 19th November 1995

ANARTS meeting

The next meeting of ANARTS will be on Friday 1st December at the usual venue. Contact Col VK2CTD QTHR for further information.

All welcome

Snippets from the Digital Journal :The international scene. November 1995

from Great Britain...

From the 1st of April 1996, new amateur callsigns will be issued using the M prefix instead of G now currently in use, starting with M0 and M1 for the class A and B licences. The change will take place whether or not any G calls remain unused. The new series will use th same regional indicators as in the past. Existing holders of G calls will not be affected, but they will not be able to change to an M call. The G prefix will continue to be used for repeaters, beacons and packet nodes.

They are talking about using unfilled prefixes here also, in the case of states with a large amateur population so that the state prefixes may no longer mean anything ...

For next week's bulletin send your bandpass to Luciano, I5FLN
at ZS5S.ZAF.AF

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA

QST de W1AW
DX Bulletin 58 ARLD058
From ARRL Headquarters Newington CT
November 16, 1995
Relayed by KB8NW/OBS & BARF-80 BBS
To all radio amateurs

This week's bulletin was made possible with info provided by
Tedd, KB8NW, Jean Michel, F6AJA, John, W4VOS, Tom, K8LA, and
Contest Corral from QST. Thanks to all

ANGOLA, D2. YO3YX is active from a UN hospital as D2/YO3YX.
Check 21273 kHz between 1700 and 1830z or 14226 kHz around
2030z. QSL via YO3YU. YO9CWY/D2 is a UN related operation
and is expected to be active for several months on all bands.

PHILIPPINES, DU. Martti, OH2BH, and Olli, OH0XX, will operate
multi-single from the QTH of DU9RG in the CQWW CW Contest.

TUNISIA, 3V. Andy, DJ7IK, Hein, DL2OBF, and Felix, DL8OBC,
will be active in the CQWW CW Contest. They will operate
multi-op, single transmitter from club station 3V8BB in Tunis.
Hopes are to be on the air one or two days before the contest.
Every QSO will be confirmed with a QSL card via the bureau.
If you can not wait for your bureau card, QSL direct to DL2OBF.

MADAGASCAR, 5R. Ray, 7P8SR, is going to 5R8 after he leaves
Lesotho, though does not expect to be active until April 1996.

KENYA, 5Z. After his activity in Seychelles as S79JD, F2JD,
will be in Kenya for 10 days in early December. He hopes to
use his previously issued call, 5Z4JD. QSL S79JD via F6AJA.

THAILAND, HS8. HS8SEA will be on the air during the SEANET
Convention at Ko Samui, Thailand, November 17, 18 and 19.
Activity will be on low bands, especially 3.5 MHz, HF and
satellites AO-10, AO-13 and all RS birds. Operating modes
will include CW, SSB, RTTY, Packet and AMTOR. QSL information
TBA over the air. The South East Asia net meets nightly on

14320 kHz at 1200z.

MADEIRA ISLAND, CT3. Listen for the following stations in the CQWW CW Contest November 25 and 26. On 160 meters, CR9X. QSL via DK8WF. On 80 meters, CT3FN. QSL via HB9CRV. On 20 meters, CR9U. QSL via DL2HYH. All three will be active before and after the contest starting around November 16 and ending on the 31st. Listen for CT3/DL2HYH, CT3/DF5AN, CT3/DK8WF and CT3/DL4ZBI.

TOBAGO, 9Y. Bernd, DL1VJ, will operate single op all band in the CQWW CW Contest from Tobago Island, IOTA SA-009. No call sign has been mentioned as of press time.

GUYANA, 8R. Erik, WZ6C, should be signing 8R1ZG soon. Plans were to be QRV in mid-November.

EL SALVADOR, YS. Tom, K8LA, will sign YS1ZTM November 18 to 28. Activity will be all CW. He has an R5 for 20-10 meters but will try to get on 80, 40 and 30 meters. Tom will also do a low key operation in the CQWW CW Contest.

COMING EVENTS

Well, I too must admit Gary has a point. The idea of taking over, from the inside, has its merits. But watching those ARRL bigshots walking around Dayton a few years ago, with there JUST SHUT UP AND LEARN THE CODE buttons, did not make me feel inclined to associate myself with such a group. I also assumed the feeling was mutual.

I do maybe 15 hamfests a year, all over the country. Anytime I pass a ARRL booth I have League guys trying to Proselytize me. As I know from there slogans and actions they have little use for me as a ham, I can only assume they do want/need my money.

>a comprimise being dc to daylight type of rig...

As far as I can tell, most of the compromise is in the DC to daylight
part, and not in the amateur band part. The radio doesn't really offer
the sensitivity at upper VHF that the advertisements seem to promise,
though there are mods out already which help that problem.

The only real negative I've found about mine is that you really have
to *use* the preamp and attenuator functions. Dynamic range isn't as
good as we've become accustomed to in some of the larger and more
expensive rigs. But given its size and its intended purpose as a mobile
rig running on an inherently narrow banded and insensitive mobile antenna,
I think it'll do fine.

I've been using mine mostly for HF data operations at home side by side
with the old standby IC-735 into a really crummy temporary antenna. I
think it does as well, and is easier to use, than the IC-735. I haven't
encountered conditions where the IC-735 worked and the IC-706 didn't. The
fine tuning rate, and the RTTY narrow filter option really work well.
Thermal control seems good too, though the fan is a bit loud. This radio
has a *lot* of features, and a surprising number of them are well thought
out, easy to use (I expect particularly in a mobile environment, its laid
out very well), and genuinely useful. I am a bit disappointed with the
stock SSB filter. A sharper filter would be useful if you're a heavy voice
user (one's an option), but I'm not. I do mostly data, so I fitted the
optional narrow RTTY filter instead.

I chose the IC-706 over the FT-900 based primarily on size. It's
ultimately going in a vehicle with very limited space for another
radio (there's already GPS, Loran, VHF and UHF, and computers in
there). The IC-706 offers some very flexible mounting options for
that. The lack of an autotuner isn't a detriment because most of
the built in autotuners I've tried can't deal with mobile antennas
very well anyway. I'll likely mount a remote tuner at the antenna
if I decide I need one (the segments where data operation are common
aren't that wide so I probably won't).

Funny you should say Bill. On of the large repeater clubs in Columbus just
had their line blocked. It seems that a couple of Hams were 'experimenting'
with caller id, and the club didnt like it, hence, the block.

However, not sure what U.S. Customs policy is, butif it is similar to
Canadian, it may be a good idea to register your Radio gear with U.S.
Customs, as you leave the U.S., so that upon your return, they don't think
you are trying to smuggle it back into the U.S.

When ever I go to the U.S., I drop into the Canadian Customs office, and
register my gear, (a small blue card carrying model number and serial number).

Have a nice visit.

Mike

With DoD completely abandoning Morse Code and, further, banning its use on military comm circuits October 1, 1996, I doubt that any classes have existed for the last few years. That's not to say that there aren't a few OT RMCSs in the Navy who do still use Morse, albeit without official approval.

Hi Burt,

Im gonna disagree with you (again) on this. Most hams I know are involved in
many activities. Most local hams I have talked to all know each other
in person, and their families all know one another. They share fun things
such as computers, and parties. Heck, a group of a fews hams and myself
recently went to a rock concert. I do know of a few like you describe,
but very, very few are that way. We get together and go to baseball
games, movies, and other events. So, please (again) keep in mind that the
new breed of radio folks, are just not like the image you speak of.
I have found 99.9% of all hams to be very friendly, intelligent, and
willing to share many things with anyone, not just hams.

Have fun...

2585. Read Ute Hunter

Newsgroup: rec.radio.amateur.misc
Date: 1995-11-23 00:00:00 UTC
From: rttyman@wwa.com
Message-ID: <49113f$k5n@kirin.wwa.com>
Source record: 234997

Want the latest utility station-related news
that will give you insight into what you are
hearing over the radio and satellite spectrum?
Want to see lots of loggings from fellow ute
monitors from around the world? Tired of
reading similar loggings in national magazines
that are up to six months old before they
appear in print? Then you should subscribe to
Ute Hunter.

Ute Hunter is a monthly publication that began
in November 1994. It is edited and published
by a former columnist for a national magazine
read by ute monitors such as you. Whether you
have a liking for news about the military,
aviation, satellites, space programs, marine
radio stations, ships, numbers stations,
digital data (such as RTTY) stations, Morse Code
transmissions, diplomatic stations, radio beacons,
etc., exclusive of amateur radio, you'll always
find something of interest to you.

Ute Hunter devotes more pages monthly to utility
station news and loggings than do Monitoring Times,
Popular Communications, and Shortwave Magazine
COMBINED. And like those magazines, you're welcome
to contribute your own news, views and loggings that
will be enjoyed by fellow hobbyists from the person
next door to one in the most desolate outpost on
Earth.

Ute Hunter is mailed by 1st-class mail to North American
addresses and by airmail elsewhere. The rates are:

USA Canada/Mexico Rest of World
One year $60 $65 $70
Two years $110 $120 $130
Three years $160 $175 $190

Sample and
back copies $6.00 $6.50 $7.00

If interested, send e-mail message to rttyman@wwa.com. In
the BODY of the message type "subscribe ute hunter." A
return message will provide further subscription information.

Hurry and subscribe, and be among the first ute monitors to know quickly what's happening and where it's taking place. I'm eager to inform you.

73,

rttyman@wwa.com
